 Laced with hope and promise for sufferers of seemingly incurable illnesses, *How Adult Stem Cell Therapies Can Save Your Life: Medicine's Best Kept Secret Saved My Life* reveals that non-controversial adult stem cell therapies are already available for those with serious diseases and injuries. This book is a practical guide to those seeking adult stem cell treatments with step-by-step instructions on how to use the Internet to locate suitable FDA approved clinical trials for almost all major infirmities Seven years ago, van Zyl suffered cardiac arrest; his heart literally stopped until doctors shocked his chest. Over the next ten months, after receiving bypass surgery, an angioplasty, and entering a cardiac rehabilitation program, van Zyl's heart was still deteriorating. Turned down by two heart transplant centers, van Zyl's only hope lay in the Food and Drug Administration (FDA), or more

specifically, a new FDA-approved clinical trial for adult stem cell therapies. One of 24 patients selected with heart failure, van Zyl entered the aggressive treatment group in 2004, where adult stem cells were harvested from van Zyl's own body and injected directly into his failing heart. The results were astonishing. Now 75, van Zyl lives a healthy, vigorous life. *How Adult Stem Cell Therapies Can Save Your Life* offers a plethora of information on the latest adult stem cell treatments for over a dozen diseases and conditions. While much has been made of the medical viability and ethical concerns of other types of stem cell therapies, van Zyl is living proof that adult stem cell therapies can save lives.

In the course of his twenty-five years of exile, Badī'uzzaman suffered three terms of imprisonment together with varying numbers of his students, and the treatises he wrote during each of these he later included in the *Risāla-i Nūr*. In *The Rays* Collection are "fruits" from all three of his sojourns in the *Madrassa-i Yūsufiyya*, as he called prison, recalling the unjust imprisonment of Joseph (UWP) and that prison is essentially a place of education and training. The *Second Ray* was the final fruit of *Eskişehir Prison* (1935-'36), while *The Eleventh Ray* has as its name *Meyve Risalesi*, *The Fruits of Belief*, and was written for his fellow prisoners in *Denizli Prison* (1943-'44). It consists of eleven Topics, which offer irrefutable proofs of the six main pillars of

faith. The last two of the Topics, however, were written in Emirdağ. Badî'uzzaman's place of compulsory residence after Emirdağ.

The last ten years have seen interest in Jainism increasing, with this previously little-known Indian religion assuming a significant place in religious studies. Studies in Jaina History and Culture breaks new ground by investigating the doctrinal differences and debates amongst the Jains rather than presenting Jainism as a seamless whole whose doctrinal core has remained virtually unchanged throughout its long history. The focus of the book is the discourse concerning orthodoxy and heresy in the Jaina tradition, the question of omniscience and Jaina logic, role models for women and female identity, Jaina schools and sects, religious property, law and ethics. The internal diversity of the Jaina tradition and Jain techniques of living with diversity are explored from an interdisciplinary point of view by fifteen leading scholars in Jaina studies. The contributors focus on the principal social units of the tradition: the schools, movements, sects and orders, rather than Jain religious culture in abstract. Peter Flügel provides a representative snapshot of the current state of Jaina studies that will interest students and academics involved in the study of religion or South Asian cultures.

In the United States, lung cancer is the second most commonly diagnosed cancer and the leading cause of cancer death. Even more devastating is its five-year survival rate of only 15.8%. Despite these dismal facts, lung cancer receives little national attention and research and funding for lung cancer lags behind other cancers. The intent of Contemporary Issues in Lung Cancer: A Nursing Perspective Second Edition is to provide oncology nurses and healthcare professionals with in-depth information on the issues that surround this disease, so that they might impact both education and research and provide better care for their patients.

The mythic creature expert and author of Phoenix takes readers through a bestiary of sea monsters featured on the famous 16th century map Carta Marina. In the sixteenth century, sea serpents, giant man-eating lobsters, and other monsters were thought to swim the waters of Norther Europe, threatening seafarers who ventured too far from shore. Thankfully, Scandinavian mariners had Olaus Magnus, who in 1539 charted these fantastic marine animals in his influential map of the Nordic countries, the Carta Marina. In Sea Monsters, mythologist Joseph Nigg brings readers face-to-face with these creatures and other magnificent components of Magnus's map. Nearly two meters wide in total, the map's nine wood-block panels comprise the largest and first realistic portrayal of the region. But in addition to its important geographic significance, Magnus's map goes beyond cartography to scenes both domestic and mystic. Close to shore, Magnus shows humans interacting with common sea life—boats struggling to stay afloat, merchants trading, children swimming, and fisherman pulling lines. But from the offshore deeps rise some of the most terrifying sea creatures imaginable—like sea swine, whales as large as islands, and the Kraken. In this book, Nigg draws on Magnus's own text to further describe and illuminate these inventive scenes and to flesh out the stories of the monsters. Sea Monsters is a stunning tour of a world that still holds many secrets for us land dwellers, who will forever be fascinated by reports of giant squid and the real-life creatures of the deep that have proven to be as bizarre and otherworldly as we have imagined for centuries. It is a gorgeous guide for enthusiasts of maps, monsters, and the mythic. "[A] beautiful new

James Henry Breasted (1865-1935) had a career that epitomizes our popular image of the archaeologist. Daring, handsome, and charismatic, he traveled on expeditions to remote and politically unstable corners of the Middle East, helped identify the tomb of King Tut, and was on the cover of Time magazine. But Breasted was more than an Indiana Jones—he was an accomplished scholar, academic entrepreneur, and talented author who brought ancient history to life not just for students but for such notables as Teddy Roosevelt and Sigmund Freud. In American Egyptologist, Jeffrey Abt weaves together the disparate strands of Breasted's life, from his small-town origins following the Civil War to his evolution into the father of American Egyptology and the founder of the Oriental Institute in the early years of the University of Chicago. Abt explores the scholarly, philanthropic, diplomatic, and religious contexts of his ideas and projects, providing insight into the origins of America's most prominent center for Near Eastern archaeology. An illuminating portrait of the nearly forgotten man who demystified ancient Egypt for the general public, American Egyptologist restores James Henry Breasted to the world and puts forward a brilliant case for his place as one of the most important scholars of modern times.

The message of this extraordinary election [in November 2010] is clear enough: the American citizenry has rejected the secular dogma, socialist policies, and machine-driven politics that comprise the Obama agenda. Now, the question is whether President Obama and his Democratic Party will accept the will of the people and change the destructive course upon which they have set this country. . . . [F]irst and foremost, Republicans must fight to dislodge the secular-socialist machine whose methods and goals are described in this book. This machine has driven America so deeply into debt, and has so fundamentally changed the relationship between the American citizenry and our government, that our children's future is now imperiled. We cannot assume that after the 2010 election, the machine will simply accept the will of the people. After all, the very purpose of a political machine is to thwart the will of the people.
