Multiplication & Division
features 64 pages of
easy-to-follow activities
and practice that engage
children's skills in
multiplication and
division—specifically
multiplying and dividing
within 100. As children
discover the relationship
between multiplication
and division, they will
build confidence essential
for math readiness. The
Skills for School series
makes learning simple
with colorful illustrations
and step-by-step
directions. Each book
focuses on different early
learning skills, allowing
you to choose the book
that best fits your child's
areas of improvement.
The practice pages
include fun activities that
help build your child's
confidence in the subject
matter and school. Each
book also includes fun
stickers that are great for
motivating and rewarding
your child.

There are worksheets to
aid kindergarten through
2nd-grade students in
memorizing the addition
and subtraction facts and
3rd-6th graders in
memorizing the
multiplication and division
facts, as each worksheet
contains all 100 of the
facts in random order.
There are also a set of
addition, subtraction,
multiplication, and
division worksheets that
have been specially
designed to use for bingo
games. Other worksheets
are aimed at helping
students in grades 3rd-6th
to become proficient at
solving long division
problems and at solving
problems that require
regrouping. There are 26
pages of this type of
worksheet, and each page
consists of addition with
regrouping, subtraction
with regrouping,
multiplication with
regrouping, and long
division problems for
students to solve. In
addition, there are

worksheets to equip older
students (those in 6th
grade and up) with the
ability to quickly add,
subtract, multiply, and
divide integers, and
instructions on how to
solve the integers are
provided with each
worksheet. Other
reproducible pages that
can be used to make bar
graphs, to write digital

Because fluency practice is not a worksheet. Fluency in mathematics is more than adeptly using basic facts or implementing algorithms. It is not about speed or recall. Real fluency is about choosing strategies that are efficient, flexible, and are appropriate for the given situation. Developing fluency is also a matter of equity and access for all learners. The landmark book *Figuring Out Fluency in Mathematics Teaching and Learning* offered educators the inspiration to develop a deeper understanding of procedural fluency, along with a plethora of pragmatic tools for

shifting classrooms toward a fluency approach. Now, teachers have the chance to apply that inspiration through explicit instruction and practice every day with the classroom companion *Figuring Out Fluency: Addition and Subtraction with Whole Numbers*. With this book, teachers can:

- Dive deeper into the Significant Strategies for fluency explained in the anchor book
- Learn how these strategies grow from and relate to the basic fact strategies children learn
- Access over 100 strategy-aligned and classroom-ready activities for fluency instruction and practice in adding and subtracting multi-digit whole numbers, including worked examples, routines, games, and centers
- Find activities for assessing all components of addition and subtraction fluency plus support for engaging families
- Download all of the needed support tools, game boards, and other resources from the companion website for immediate implementation. Give each and every student the knowledge and power to become skilled and confident mathematical thinkers and doers.

 This book has more than 3100 multiplication facts for daily practice by students. Each page has 2 different sets consisting of 18 problems each. It is recommended for students to attempt 1 set daily for consistent practice. Book starts and ends with times table charts for easy reference followed by some quick multiplication facts. Once students start gaining confidence in individual facts, they can attempt mixed facts. Book can be used to track practice time for each set. Date and time can be recorded at top of each page. Answer to each problem is given at the end of the book. Knowing multiplication facts is

helpful not only in academics; we frequently use multiplication in our daily lives too. Just like learning to walk before you can run, learning multiplication and familiarizing yourself with numbers are building blocks for other math topics taught in school - such as division, long multiplication, fractions and algebra. Mastering the basic math facts develops automaticity in kids. Automaticity is the ability to do things without occupying the mind with the low level details that are required; this is usually the result of consistent learning, repetition, and practice. For instance, an experienced cyclist does not have to concentrate on turning the pedals, balancing, and holding on to the handlebars. Instead, those processes are automatic and the cyclist can concentrate on watching the road, the traffic, and other surroundings. Until students have developed sufficient sensory-cognitive tools supporting access to symbolic memory, they will not be able to image, store or retrieve all of the basic facts with automaticity. Therefore, students need a comprehensive,

developmental, and multi-sensory structured system for developing automaticity with the facts.
