A clash of warriors draws closer as Rhulad Sengar, the Emperor of a Thousand Deaths, spirals into madness, surrounded by sycophants and agents of his Machiavellian chancellor. Against this backdrop, a band of fugitives seek a way out of the empire, but one of them, Fear Sengar, must find the soul of Scabandari Bloodeye. It is his hope that the soul might help halt the Tiste Edur, and so save his brother, the emperor.

Next year (2018), we will be celebrating the 15th anniversary of the International Journal of Environmental Research and Public Health—IJERPH (ISSN 1660-4601). Hence, we are currently organizing a Special Issue to commemorate this important milestone. Founded in 2004, IJERPH has experienced a tremendous growth in terms of the number and quality of scientific publications. With a 2016 impact factor of 2.101, IJERPH now ranks among the top international journals in the emerging field of environmental research and public

health. As described on our website (<https://www.mdpi.com/journal/ijerph>), IJERPH is a peer-reviewed journal that focuses on the publication of scientific and technical information on the impacts of natural phenomena and anthropogenic factors on the quality of our environment, the interrelationships between environmental health and the quality of life, as well as the socio-cultural, political, economic, and legal considerations related to environmental stewardship and public health. Its primary areas of research interests include: Gene-environment interactions, Environmental genomics and proteomics

Environmental toxicology, mutagenesis and carcinogenesis  
Environmental epidemiology and disease control  
Health risk assessment and management  
Ecotoxicology, and ecological risk assessment and management  
Natural resources damage assessment  
Environmental chemistry and computational modeling  
Environmental policy and management  
Environmental engineering and biotechnology  
Emerging issues in environmental health and diseases  
Environmental education and public health  
To help celebrate the 15th anniversary, you are

kindly invited to submit original articles, critical reviews, research notes, and short communications on any of the above-listed topics. Please also encourage any of our colleagues who may be interested to submit manuscripts. We expect that this issue will attract considerable attention, as we prepare to celebrate the excellent scientific contributions and socio-economic impacts of IJERPH over the past 15 years.

Alex Rogo is a harried plant manager working ever more desperately to try and improve performance. His factory is rapidly heading for disaster. So is his marriage. He has ninety days to save his plant - or it

will be closed by corporate HQ, with hundreds of job losses. It takes a chance meeting with a colleague from student days - Jonah - to help him break out of conventional ways of thinking to see what needs to be done. Described by Fortune as a 'guru to industry' and by Businessweek as a 'genius', Eliyahu M. Goldratt was an internationally recognized leader in the development of new business management concepts and systems. This 20th anniversary edition includes a series of detailed case study interviews by David Whitford, Editor at Large, Fortune Small Business, which explore how organizations around the world have been

transformed by Eli Goldratt's ideas. The story of Alex's fight to save his plant contains a serious message for all managers in industry and explains the ideas which underline the Theory of Constraints (TOC) developed by Eli Goldratt. Written in a fast-paced thriller style, *The Goal* is the gripping novel which is transforming management thinking throughout the Western world. It is a book to recommend to your friends in industry - even to your bosses - but not to your competitors! *Code of Federal Regulations* Routledge Special edition of the Federal Register, containing a codification of documents of general applicability and future

The Target Oriented Curriculum (TOC) is arguably the most comprehensive, fundamental and controversial attempt to promote systemic curriculum reform in Hong Kong. It aimed at a radical change in the nature of knowledge, pedagogy and assessment in schools. After an initial phase of confusion and criticism, this ambitious reform was revamped and vigorously promoted, but within a few years, it totally lost momentum as other educational issues attracted the attention of policy-makers. This book traces the career of TOC and studies the impact of the reform

on the education system, subjects, schools and teachers. Drawing on a four-year multi-level research project, the chapters provide a deep understanding of the complex nature of educational reform and how a new curriculum is interpreted, developed and implemented. Besides providing a fascinating portrayal of the experiences of the TOC reform, this book offers lessons for future curriculum change in Hong Kong and elsewhere. 'This', writes Ivor Goodson in the Foreword, 'is curriculum research at its best.'

This completely revised and enlarged second edition

provides an up-to-date overview of all major topics in sedimentary geology. It is unique in its quantitative approach to denudation-accumulation systems and basin fillings, including dynamic aspects. The relationship between tectonism and basin evolution as well as the concepts of sequence cycle and event stratigraphy in various depositional environments are extensively discussed. Numerous, often composite figures, a well-structured text, brief summaries in boxes, and several examples from all continents make the book an invaluable source of information for students, researchers and professors in academia

as well as for professionals in the oil industry.

The words we use to talk about justice have an enormous impact on our everyday lives. As the first in-depth, ethnographic study of language, *Talking Criminal Justice* examines the speech of moral entrepreneurs to illustrate how our justice language encourages social control and punishment. This book highlights how public discourse leaders (from both conservative and liberal sides) guide us toward justice solutions that do not align with

our collectively professed value of "equal justice for all" through their language habits. This contextualized study of our justice language demonstrates the concealment of intentions with clever language use which mask justice ideologies that differ greatly from our widely espoused justice values. By the evidence of our own words Talking Criminal Justice shows that we consistently permit and encourage the construction of people in ways which attribute motives that elicit and empower social control and punishment responses, and that make punitive public policy options acceptable. This book will be of interest to academics, students and professionals

concerned with social and criminal justice, language, rhetoric and critical criminology. *The Theory of Constraints* Geological Society of London Multiply your productivity with the world's most straightforward guide to the world's most popular office software Microsoft Office 365 contains straightforward tools for virtually every office task you could possibly think of. The definitive guide to the theory of

constraints In this authoritative volume, the world's top Theory of Constraints (TOC) experts reveal how to implement the groundbreaking management and improvement methodology developed by Dr.

Eliyahu M. Goldratt.

Theory of Constraints

Handbook offers an in-depth examination of

this revolutionary concept of bringing about global organization performance improvement by focusing on a few leverage points of the system. Clear explanations supplemented by examples and case studies define how the theory works, why it works, what issues are resolved, and what benefits accrue, and demonstrate how TOC can be applied to different industries and situations. Theory of Constraints Handbook covers: Critical Chain Project Management for realizing major improvements in delivering projects on time, to specification, and within budget Drum-Buffer-Rope (DBR), Buffer Management, and

distribution for maximizing throughput and minimizing flow time Performance measures for applying Throughput Accounting to improve organizational performance Strategy, marketing, and sales techniques designed to increase sales closing rates and Throughput Thinking Processes for simple and complex environments TOC methods to ensure that services actions support escalating demand for services while retaining financial viability Integrating the TOC Thinking Processes, the Strategy and Tactic Tree, TOC measurements, the Five Focusing Steps of TOC, and Six Sigma as a system of tools for sustainable improvement

 Pretreatment for Reverse Osmosis Desalination is a comprehensive reference on all existing and emerging seawater pretreatment technologies used for desalination. The book focuses on reverse osmosis membrane desalination, which at present is the most widely applied technology for the production of fresh drinking water from highly saline water sources (brackish water and seawater). Each chapter contains examples illustrating various pretreatment technologies and their practical implementation. Provides in-depth overview of the key theoretical concepts

associated with desalination pre-treatment Gives insight into the latest trends in membrane separation technology  
 Incorporates analytical methods and guidelines for monitoring pretreatment systems

 The Neuquen Basin of northern Patagonia provides an excellent case study in basin analysis and sequence stratigraphy. The basin is one of the largest petroleum provinces in South America and includes a dramatic record of relative sea level changes as well as a unique and globally important palaeontological record. Understanding this region is also central to unravelling

the history of the Andes. The latest developments in the study of the area have been combined in this volume to give an integrated series of case studies that document the structural, igneous, sedimentological and palaeontological history of the region from the Triassic to the Recent. This publication provides an introduction into this fascinating region as well as a resource that includes the most complete and up-to-date studies of the area.

“A truly amazing portrayal of the technical, the emotional, and the courageous. Macy puts the reader in the cockpit of our most

lethal attack platform.”  
—Dick Couch, New York Times–bestselling author  
Apache is the incredible true story of Ed Macy, a decorated Apache helicopter pilot, that takes you inside one of the world’s most dangerous war machines. A firsthand account of the exhilaration and ferocity of war, Apache chronicles a rescue mission involving a stranded soldier in Afghanistan in 2007. Ed Macy had always dreamed of a career in the army, so when the British Army Air Corps launched its attack helicopter program, Macy bent every rule in the book to make sure he was the first to sign up to fly the Apache—the deadliest, most technically advanced helicopter in

the world and the toughest to fly. In 2007, Macy's Apache squadron was dispatched to Afghanistan's notorious Helmand Province with the mission to fight alongside and protect the men on the ground by any means necessary. When a marine goes missing in action, Macy and his team know they are the Army's only hope of bringing him back alive. Apache is Macy's story—an adrenalin-fueled account of one of the most daring actions of modern wartime, and a tale of courage, danger, and comradeship you won't be able to put down. This book demonstrates how managers can use and transfer knowledge more effectively to stimulate innovation in their organization in order to increase their competitive advantage. Jones and Mahon draw on their discussions with combat Veterans, whose very survival relies on their skill in transferring crucial knowledge and information quickly, effectively and efficiently. They note

that in today's competitive and fast-paced business world, these skills translate into continual innovation, metamorphosis, and ultimately success. The authors have built a conceptual framework that demonstrates to the reader how to develop the same underlying skills and to use them effectively in the business environment. With rich and lively examples throughout, Knowledge Transfer and Innovation equips students and practitioners of knowledge management, innovation, leadership and strategy with the skills, tools and strategies to succeed in today's fast-paced business environment. Keep your butt down and your ears up, people, 'cause here comes a tie-in to the hit History Channel show, featuring outrageous host R. Lee Ermey, who answers questions about military technology -- past, present, and future. Now in its fourth season, Mail Call is the most popular program on the History Channel and the only show in America where the host has a bazooka and knows how to use it! In this tie-in book, just as on the show, R. Lee Ermey -- in his singular, in-your-face style -- provides entertaining and little-known facts about the vast arsenal of deadly hardware used by the armed forces. Mail Call is filled with historical

anecdotes, interesting factoids, quotes from top military experts, and much more. This book is sure to appeal not only to military nuts and "gear heads," which is a very sizable audience in itself, but also to garden-variety history buffs; Ermey's repertoire runs the historical gamut from ancient catapults to Samurai swords to Civil War cannons to modern grenade launchers.

This book is a product of the joint JGOFS (Joint Global Ocean Flux Study)/LOICZ (Land-Ocean Interactions in the Coastal Zone) Continental Margins Task Team which was established to facilitate continental margins research in the two

projects. It contains significant information on the physical, biogeochemical, and ecosystems of continental margins nationally and regionally and provides a very valuable synthesis of this information and the physical, biogeochemical and ecosystem processes which occur on continental margins. The publication of this book is timely as it provides a very strong foundation for the development of the joint IMBER (Integrated Marine Biogeochemistry and Ecosystems Research)/LOICZ Science Plan and Implementation Strategy for biogeochemical and ecosystems research in the continental

margins and the impacts of global change on these systems. This initiative will move forward integrated biogeochemical and ecosystems research in the continental margins. We thank all the contributors to this volume and especially Kon-Kee Liu who has dedicated a great deal of time to ensuring a high-quality book is published. Preface In general, interfaces between the Earth's larger material reservoirs (i. e. , the land, atmosphere, ocean, and sediments) are important in the control of the biogeochemical dynamics and cycling

of the major bio-essential elements, including carbon (C), nitrogen (N), phosphorus (P), sulfur (S), and silicon (Si), found in organic matter and the inorganic skeletons, shells, and tests of benthic and marine organisms.
