## POWERS NATHAN

*The Acts of the Parliament of Tasmania*  
 Food & Agriculture Org.  
 Considers legislation establishing natural resource conservation and development programs for the unemployed.  
The Forest Service Program for Forest and Rangeland Resources Continuing to Save Money and Trees  
 The forest health crisis in the San Bernardino National Forest  
 Legal and Institutional Aspects of Urban and Peri-urban Forestry and Greening  
 Identifies and describes specific government assistance opportunities such as loans, grants, counseling, and procurement contracts available under many agencies and programs.

*building better rural places* Oxford University Press  
 S2Administrators of the Federal-State Cooperative Forest Management (CFM) program need sound investment guides for monitoring the efficiency of their program activities. This study, undertaken by the Northeastern Forest Experiment Station in cooperation with the Pennsylvania Department of Forests and Waters, provides CFM program administrators with a portion of the data they need to insure that their program and its adjunct, the Agricultural Conservation Program (ACP), are functioning in a manner that will produce maximum benefits for the dollars spent.S3.

*Continuing to Save Money and Trees*  
 Overall, urban and peri-urban forestry and greening (UPFG) receives little interest on political agendas despite its importance to society in terms of the social, economic, aesthetic and environmental benefits. This is even more problematic in developing countries and countries with economies in transition. This publication explores the legal and institutional issues related to UPFG on a global level, using case studies to illustrate the varied nature of its application and concluding that further efforts are required to improve existing legal frameworks  
**Predisaster Assistance for Eucalyptus**

**Tree Fire Hazard, Hearing Before the Subcommittee on Forests of ..., 93-1 on H.R. 7545, H.R. 7669, H.R. 7674, and S. 1697, May 29, 1973**

This volume is an account of the scientific and social responses made to the discovery of an invasive forest insect -- the emerald ash borer or EAB (*Agrilus planipennis* Fairmaire, 1888) -- in North America, that was formally announced in July 2002. Since its recognition, this wood-boring beetle has become one of the most destructive and costly exotic species ever encountered. More than \$300 million in federal USDA-APHIS funds (alone) have been devoted to battling this pest, which has killed some tens of millions of ash trees, chiefly within southeastern Michigan and surrounding states. EAB has now been found in 28 states and two Canadian provinces. But those numbers are almost certain to keep growing in coming years. While primarily a case study, this work nonetheless examines larger issues concerning invasive species as a whole,

their inadvertent transport and worldwide spread through the rise of globalization, regulations that have been adopted to prevent their introduction, and the successes or failures of state and federal agencies to try and enforce those regulations. It offers the first general work of its kind to appear on the ash borer that is directed towards a broad audience including the public, entomologists and foresters, environmentalists and ecologists, researchers, regulators, and indeed anyone who wishes to learn more about this important and timely topic. No previous knowledge of EAB or invasion biology is assumed. This book covers all of the major aspects of scientific research and management that have occurred since EAB was recognized in 2002. It is thoroughly researched and draws from the best available data and sources, which represent (a) archival materials; (b) scholarly publications and conference proceedings; (c) interviews conducted with leading participants in the EAB program; (d) selected newspaper/magazine articles;

and (e) reputable sources found on the Internet (e.g., USDA-APHIS).
