Reid (history, U. of NC Chapel Hill) emphasizes the human story of sewers--politics, sanitation, labor. The engineering of Parisian sewers occupies some 85 pages (lacking a single map). Good book. Annotation copyrighted by Book News, Inc., Portland, OR  
**Engineering News** The Last Sewer Ball Vinny is on a quest to track down Whitey after decades apart, to find out what really happened to the childhood friendship they thought would last forever. Could family tragedies, a war, and perhaps even a murder break a bond that was forged long before eighth grade graduation? Secrets that have been simmering for decades bubble to the surface and eventually explode, when past and present collide. Sewer Balls No balls? No money? No problem. Just have your buddy hold you by the ankles and lower you into a sewer, armed with a bent coat hanger. There are plenty of spaldeens down there for the scooping. And odds are, a couple of them are perfectly good for stick-ball or king-queen. So what if they're sewer balls. Oh, and one more thing: You better trust the guy who's holding you. I mean really trust him. Annual Report The Sewer Boy

A global guide to sewers that celebrates the magnificently designed and engineered structures beneath the world's great cities. The sewer, in all its murkiness, filthiness, and subterranean seclusion, has been an evocative (and redolent) literary device, appearing in works by writers ranging from Charles Dickens to Graham Greene. This entertaining and erudite book provides the story behind, or beneath, these stories, offering a global guide to sewers that celebrates the magnificently designed and engineered structures that lie underneath the world's great cities. Historian Stephen Halliday leads readers on an expedition through the execrable evolution of waste management—the open sewers, the cesspools, the nightsoil men, the scourge of waterborne diseases, the networks of underground piping, the

activated sludge, the fetid fatbergs, and the sublime super sewers. Halliday begins with sanitation in the ancient cities of Mesopotamia, Greece, and Imperial Rome, and continues with medieval waterways (also known as “sewage in the street”); the civil engineers and urban planners of the industrial age, as seen in Liverpool, Boston, Paris, London, and Hamburg; and, finally, the biochemical transformations of the modern city. The narrative is illustrated generously with photographs, both old and new, and by archival plans, blueprints, and color maps tracing the development of complex sewage systems in twenty cities. The photographs document construction feats, various heroics and disasters, and ingenious innovations; new photography from an urban exploration collective offers edgy takes on subterranean networks in cities including Montreal, Paris, London, Berlin, and Prague.

Nineteen years ago, a parasitic fungal outbreak killed the majority of the world's population, forcing survivors into a handful of quarantine zones. Thirteen-year-old Ellie has grown up in this violent, postpandemic world, and her disrespect for the military authority running her boarding school earns her new enemies, a new friend in fellow rebel Riley, and her first trip into the outside world. \* The official lead-in to the game from Faith Erin Hicks (The Adventures of Superhero Girl) and Naughty Dog's Neil Druckmann!

A satire of a surreal technocratic future by the national-best-selling author of Lovecraft Country: “Dizzily readable” (Thomas Pynchon). High above Manhattan, android and human steelworkers are constructing a new Tower of Babel for billionaire Harry Gant, as a monument to humanity’s power to dream. In the festering sewers below, a darker game is afoot: a Wall Street takeover artist has been murdered, and Gant’s crusading ex-wife, Joan Fine, has been hired to find out why, in this wild romp by the acclaimed author of Fool on the Hill and Lovecraft Country. The year is 2023, and Ayn Rand has been resurrected and bottled in a hurricane lamp to serve as Joan’s assistant; an eco-terrorist named Philo Dufrense travels in a pink-and-green submarine designed by Howard Hughes; a Volkswagen Beetle is possessed by the spirit of Abbie Hoffman; Meisterbrau, a mutant great white shark, is running loose in the sewers beneath Times Square; and a one-armed 181-year-old Civil War veteran joins Joan and Ayn in their quest for the truth. All of them, and many more besides, are about to be caught up in a vast conspiracy involving Walt Disney, J. Edgar Hoover, and a mob of homicidal robots . . . “[An] SF roller-coaster satirizing the horrors of our nascent technocracy . . . Told with breezy good humor, this exuberantly silly tale will find an audience among admirers of the day-glo surrealism of Steve Erickson and the tangled conspiracy theories of David Foster Wallace.” —Publishers Weekly “A turbocharged neo-Dickensian hot rod [with] plenty of intellectual horsepower.” —Neal Stephenson

#### Brookly Water Works and Sewers

Air, land, . . . and sewer? Exiled for centuries to a primitive planet, the people of Aerros have learned to live without animals or higher technology but using their genetically engineered plants, cultures, and Wing cousins to survive instead. Over time, they improved the Wings, from flying idiots to a productive serving class. But there are some places that feathered appendages just wont fit. The humans who handle these less-than-pleasant tasks are provided extra assistance and special privileges to make up for such work. Pete is just a boy, but hes quick and agile and can get into all of those tight spaces to help his father maintain the sewers, but he could do without the older apprentices hazing. Left in the dark, filthy tunnels by his fathers apprentice, Pete is rescued by Jared, a unique descendant of both human and Wing. This chance intervention sets Pete, Jared, and their friends on a path that will eventually bring the true problem of the settlement to light.
