Choosing the right dog food in a world with too many choices

Walking down the dog food aisle in a pet supply superstore can present you with an overwhelming number of choices. Reading about dog food on the internet can make your head spin with so many opinions and stories. And judging the content that you find on dog food packaging can be confusing and misleading. How can the average dog owner make an informed choice in accordance with her dog's age, size and condition? In her latest book, author Linda Case describes how to make logical, evidence-based decisions for what to feed your dog amid all the options available.

You will learn

- How pet food marketers appeal to your emotions to persuade you to buy a particular type of dog food.
- To distinguish between scientific, evidence-based information and the anecdotal evidence which is so pervasive—and often misleading—in the dog food arena.
- Is there a scientific basis for dog foods designed specifically for puppies, senior dogs, canine athletes—even various breeds of dogs?
- How to read and evaluate all of the material included on a typical package of dog food from the ingredients and label claims (“Natural,” “Anti-Oxidant,” “Low Fat”), to the Nutrient Analysis and Nutritional Adequacy statements.
- How to avoid choice paralysis and the cognitive traps that can interfere with clear decision making.

What experts are saying about *Dog Food Logic*

Pet food is like a religion for many—but now those strong emotional ties can be backed up with fact. Linda Case separates fact from fiction, explains the complex terms and offers a guide to pet nutrition in simple to comprehend language. Unlike other books on this topic, there is no agenda here—except to present facts and then allow pet owners to make their own logical conclusions, letting the kibble drop where it may.

Dog Food Logic is the indispensable guide to the science behind canine nutrition that will help us to make wise, well-informed choices about how and what we feed our dogs. It takes the fear out of trying to understand proper nutrition and will empower us to determine what is best for the health of our dogs.

Claudia Kawczynska, Founder and Editor-in-chief of The Bark

Don't read this book if you want someone to tell you what to feed your dog. This is a book for people who want to learn, in a reasoned and thoughtful way, how to figure it out for themselves. *Dog Food Logic* goes way beyond the usual textbook list of nutritional requirements to cover the pet food industry in all its glory: the history, the business, the marketing, and best of all, the science. Case deftly navigates the most controversial topics in pet food and presents the big picture without interjecting judgment about what approach is best. There's something here for everyone: pet care professionals and dog lovers alike will learn something new from this informative, easy to read, and well researched book.

A dog is an ideal workout partner: always supportive, happy to go for a walk and never judgmental. The human-companion animal bond is a great way to help you and your dog lose weight or stay fit. When people and dogs exercise together, fitness and health happen on both ends of the leash. As the obesity epidemic spreads, 70% of Americans and 50% of dogs are overweight or obese, resulting in staggering health care costs and suffering. The causes, consequences, and treatment for overweight and obesity are strikingly similar in people and dogs. *Walk a Hound, Lose a Pound*, written by an expert veterinary surgeon and a leading nurse researcher, helps you move from a food-centered relationship with dogs, to an exercise-centered relationship. Even better, you don't have to own a dog! The book gives several creative suggestions to exercise or walk a dog even if you do not or cannot have one. This volume is designed for dog lovers, dog owners and families. Based on the latest scientific findings, it will also help professionals (including physicians, veterinarians, and physical therapists) fight obesity and promote fitness in both people and pets. Dog-walking programs can easily be implemented in neighborhoods, parks, workplaces, animal shelters, hospitals, retirement homes and obesity clinics, and this book shows you how to establish them. In nearly every health care profession, practitioners are teaching human patients and dog owners on a daily basis about the risks of obesity. Never has there been a more compelling time for innovative approaches to increasing physical activity, reforming sedentary lifestyles, and enhancing fitness. *Walk a Hound, Lose a Pound* provides specific strategies for people and dogs to exercise together, lose weight together, and have fun in the process.

There is no magic pill. There is no perfect diet. Could it be that our underlying assumption—that what we're eating is making us fat and sick—is just plain wrong? To address the rapid rise of "lifestyle diseases" like diabetes and heart disease, scientists have conducted a whopping 500,000 studies of diet and another 300,000 of obesity. Journalists have written close to 250 million news articles combined about these topics. Yet nothing seems to halt the epidemic. Anastacia Marx de Salcedo's *Eat Like a Pig, Run Like a Horse* looks not just to data-driven science, but to animals and the natural world around us for a new approach. What she finds will transform the national debate about the root causes of our most pervasive diseases and offer hope of dramatically reducing the

number who suffer—no matter what they eat. It all began with her own medical miracle—she has multiple sclerosis but has discovered that daily exercise was key to keeping it from progressing. And now, new research backs up her own experience. This revelation prompted Marx de Salcedo to ask what would happen if people with lifestyle illnesses put physical activity front and center in their daily lives? *Eat Like a Pig, Run Like a Horse* takes us on a fascinating journey that weaves together true confessions, mad(ish) scientists, and beguiling animal stories. Marx de Salcedo shows that we need to move beyond our current diet-focused model to a new, dynamic concept of metabolism as regulated by exercise. Suddenly the answer to good health is almost embarrassingly simple. Don't worry about what you eat. Worry about how much you move. In a few years' time, adhering to a finicky Keto, Paleo, low-carb, or any other special diet to stay healthy will be as antiquated as using Daffy's Elixir or Dr. Bonker's Celebrated Egyptian Oil—popular "medicines" from the 1800s—to cure disease. And just as the 19th-century health revolution was based on a new understanding that the true cause of malaria, tuberculosis, and cholera was microorganisms, so the coming 21st-century one will be based on our new understanding that exercise is the only way to metabolic health. Fascinating and brilliant, *Eat Like a Pig, Run Like a Horse* is primed to usher in that new era.

Human nutrition expert and author of the critically acclaimed *What to Eat*, Marion Nestle, Ph.D., M.P.H., has joined forces with Malden C. Nesheim, Ph.D., a Cornell animal nutrition expert, to write *Feed Your Pet Right*, the first complete, research-based guide to selecting the best, most healthful foods for your cat or dog. Human nutrition expert and author of the critically acclaimed *What to Eat*, Marion Nestle, Ph.D., M.P.H., has joined forces with Malden C. Nesheim, Ph.D., a Cornell animal nutrition expert, to write *Feed Your Pet Right*, the first complete, research-based guide to selecting the best, most healthful foods for your cat or dog. A comprehensive and objective look at the science behind pet food, it tells a fascinating story while evaluating the range of products available and examining the booming pet food industry and its marketing practices. Drs. Nestle and Nesheim also present the results of their unique research into this sometimes secretive industry. Through conversations with pet food manufacturers and firsthand observations, they reveal how some companies have refused to answer questions or permit visits. The authors also analyze food products, basic ingredients, sources of ingredients, and the optimal ways to feed companion animals. In this engaging narrative, they explain how ethical considerations affect pet food research and product development, how pet foods are regulated, and how companies influence veterinary training and advice. They conclude with specific recommendations for pet owners, the pet food industry, and regulators. A road map to the most nutritious diets for cats and dogs, *Feed Your Pet Right* is sure to be a reference classic to which all pet owners will turn for years to come.

Updating recommendations last made by the National Research Council in the mid-1980s, this report provides nutrient recommendations based on physical activity and stage in life, major factors that influence nutrient needs. It looks at how nutrients are metabolized in the bodies of dogs and cats, indications of nutrient deficiency, and diseases related to poor nutrition. The report provides a valuable resource for industry professionals formulating diets, scientists setting research agendas, government officials developing regulations for pet food labeling, and as a university textbook for dog and cat nutrition. It can also guide pet owners feeding decisions for their pets with information on specific nutrient needs, characteristics of different types of pet foods, and factors to consider when feeding cats and dogs.

For health-conscious pet owners, a natural, holistic guide to getting every canine back to his best, most primal state. From the tiniest teacup poodle to the most massive Great Dane, dogs' digestive systems are pure wolf. Fido's ancestors enjoyed a diet that was 45-50 percent protein, 40-50 percent fat, and less than 10 percent carbohydrates. Walk down the pet food aisle, however, and you'll find that typical commercial kibble is made mainly of starchy ingredients like peas, potatoes, corn, wheat, rice, and oats—nothing a prehistoric pup would dream of eating. This "healthy" mix is proving anything but: About 85 percent of dogs eat commercial dog food, and at least half of them

are overweight or obese, with cancer killing 42 percent of all dogs and half of dogs over the age of 10. So how do you feed a wolf disguised as a pug? *Paleo Dog* guides readers through an assessment of their dogs' diet and helps them find the right balance of healthy ingredients. In addition to recipes and nutrition info, the book offers advice on what treats are safe, training tips, minimizing veterinary care, the benefits of exercise and massage, and how to ensure dogs are receiving the love and attention they need. *Paleo Dog* is the ultimate manual for any pet owner who wants to give her pet the longest and best quality of life.

Feed Your Best Friend Better Rodale

Highlighting the dangers of modern pet food—how it is unbalanced, creates addiction, and often contains ingredients that can literally poison your pet, this book destroys the myths propounded by pet food companies that human food is bad for pets, and that natural food diets are unsafe. Three veterinarians share their expertise and scientific evidence, providing an in-depth appraisal of the pet food industry and what people are feeding to their cats and dogs. This revolutionary book teaches how to read pet food labels and what ingredients to avoid, how to save on pet bills by preventing diet-related disease in pets, why veterinarians are often ignorant of the health effects of manufactured pet food, how a change in diet can cure many diet-related illnesses, and why organic farming practices and suppliers can be the best choice for pets. Armed with this information, people will be able to provide a better and healthier life for their animals.

Problems with your dog? It may be his thyroid! If your dog is lethargic, losing his hair, gaining weight or suddenly becomes aggressive, perhaps the last thing you (or your vet!) would think about is his thyroid. Unfortunately, however, thyroid disorders can cause literally dozens of health and behavioral problems in dogs and frequently go undiagnosed or are misdiagnosed. And the real tragedy is that most thyroid problems are treatable with the right medical care and a well-informed owner can often minimize the chance of a thyroid disorder occurring in the first place. Noted veterinarian Jean Dodds and co-author Diana Laverdure have done the dog owning public and their vets a great service by writing *The Canine Thyroid Epidemic*. The book is written in such a way to inform both the average dog owner and animal health care professionals about the ways in which thyroid disorders occur, can be prevented and treated.
