Get exact information on 24 common disorders and how communication can be negatively impacted. Resources abound on the nature of disorders such as Autism and Down Syndrome. However, how do we help these individuals communicate more effectively and where do we find resources to learn more? Within this book, each communication disorder is described by the definition, description, characteristics, causes, implications for treatment, and additional resources, such as support groups, books, websites and additional sources for finding out more to best support individuals who struggle communicating. Supporting individuals with communication disorders and related conditions involves a coordinated team of people that can include family, professionals, educators and other community members. This is an edited book based on papers presented at a 2003 invitee-only conference under the sponsorship of the Merrill Advanced Studies Center of the University of Kansas. The participants were prominent scholars in the areas of language and reading, and have research programs funded by NIH and other sources. The purpose of the gathering was to discuss theoretical issues and research findings concerning the relationship between developmental language and reading disabilities, specifically looking at neurological, behavioral, and genetic factors. In addition, it discussed other factors contributing to reading difficulties in the middle elementary school years through adolescence and literacy outcomes for children with early language impairments, and how these problems relate to children with dyslexia. The Foreword is written by Reid Lyon, Branch Chief, Child Development and Behavior Branch, NICHD-National Institutes of Health. This book appeals to scholars in the areas of language disorders and reading disabilities, as well as to practicing speech-language pathologists, special educators, and reading specialists. Here's How to Do Accent Modification: A Manual for Speech-Language Pathologists is designed for speech-language pathologists (SLPs) working with clients on accent modification in American English. A growing number of non-native speakers are interested in improving their communication skills and SLPs need preparation to work with this clientele. The text provides copious advice and many diverse techniques for teaching accent modification, from the level of basic sounds to the level of discourse. The text emphasizes realistic goal setting, so that clients focus on becoming effective communicators as opposed to sounding exactly like native speakers. The objective is a balance between clear and natural speech. Many SLPs favor intelligibility over naturalness because of their backgrounds working with speech delayed children, but with non-native speakers this often leads to unnatural speech and listeners focus on how something is said as opposed to what is said. *Here's How to Do Accent Modification* is uniquely geared toward the skills and backgrounds of SLPs working with clients in a one-on-one setting, but is also an excellent introductory text for any English as a Second Language (ESL) teacher. Robert McKinney brings this unique perspective as a speech-language pathologist with degrees in both Communication Disorders and Teaching English as a Second Language. Also included with the text are numerous practical activities and worksheets for working with clients. The ebook includes audio files and video clips to demonstrate working with non-native speakers.
