"This book
documents
important
milestones in
the epic
journey
traversed by
the Central
Bank of Kenya
over the last
50 years,
putting into
perspective
the evolution
of central
banking
globally and
within the
East African
region, and
contemplating
future

prospects and
challenges.
The book is
timely, mainly
because the
global
financial
landscape has
shifted.
Central
bankers have
expanded
their
mandates,
beyond the
singular focus
on inflation
and consider
economic
growth as
their other
important
objective.
Financial
crises have
continued to
disrupt the
functioning of
financial
institutions
and markets,
the most

devastating episodes being the global financial crisis, which broke out in 2008 and from which the global financial system has not fully recovered, and the unprecedented challenges posed by the global coronavirus pandemic. Bank regulation has moved from Basel I, to Basel II, and somehow migrated to Basel III, although some countries are

still at the cross-roads. The book originated from the wide ranging discussions on central banking, from a symposium to celebrate the 50 year anniversary on 13 September 2016 in Nairobi. The participants at the symposium included current and former central bank governors from Kenya and the Eastern Africa region, high level officials from multilateral

financial institutions, policy makers, bank executives, civil society actors, researchers and students. The book is an invaluable resource for policy makers, practitioners and researchers, on how monetary policy and financial practices in vogue today in Kenya have evolved through time and worked very well, but also about some pitfalls"-

While Africa is
too often
regarded as
lying on the
periphery of
the global
political arena,
this is not the
case. African
nations have
played an
important
historical role
in world
affairs. It is
with this
understanding
that the
authors in this
volume set
out upon
researching
and writing
their chapters,
making an
important
collective
contribution to

our
understanding
of modern
Africa. Taken
as a whole,
the chapters
represent the
range of
research in
African
development,
and fully tie
this
development
to the global
political
economy.
African
nations play
significant
roles in world
politics, both
as nations
influenced by
the ebbs and
flows of the
global
economy and
by the
international
political
system, but

also as actors,
directly
influencing
politics and
economics. It
is only
through an
understanding
of both the
history and
present place
of Africa in
global affairs
that we can
begin to
assess the
way forward
for future
development.

Initial Public
Offerings
(IPOs) marks
an important
turning point
in the life of a
company. To
the company
as an entity, it
provides
access to

public equity capital and so may lower the cost of funding the company's operations and investments. To the public, it provides an opportunity for investment in a liquid market. The objective of this study is to investigate the long-run performance of initial public offerings in Kenya for the period from 2002 to 2008. Data used in this study comes from Nairobi Stock Exchange (NSE) weekly share price. In

addition, the study uses a theory on IPO introduced by Ritter (1991) which specifically deals with long-run performance of IPOs and why some IPO companies have substantial positive returns and others have substantial negative long-run buy-and-hold abnormal returns. To evaluate the short-run and long-run performance, this study approaches the problem by differentiating

the abnormal return patterns using financial economic methodologies. The empirical findings suggest that the subsequent trading activities in the stock market are the most important factor for determining the future performance of an IPO. These activities are extensively engineered by some of the influential investors with big stake in the stock market. Thus,

it is very hard to analyze the fundamental value of this stock market. Future researchers should concentrate on statistical analysis of the dependency of several independent variables. With an attempt to investigate whether the percentage of share sold, the uncertainty about the future value of the firm, the market index fluctuation, the size of firm, the political stability and the value of

issue on the first day of trading significantly influence the initial returns and the long-run performance of IPOs. The results from this study suggest that firms with a superior performance have the opportunity to appreciate in value and can raise additional capital whereas the poor performers do not get a second chance to sell shares to the public. This means that

companies have to earn at least their cost of capital in order to receive confidence from the investors. Compared to other research, this study gives a theoretical and empirical background on the performance and the significant difference in short-run and long-run performance of IPOs. This finding offers new insights to both Academics and practitioners alike.

The Political Economy of Development and Underdevelopment in Africa
Routledge
Fully revised and updated, this essential yearbook is recognized internationally as a standard work of reference on the oil and gas industry. The greater part of this book provides narrative, production and financial details of more than 800 major oil and gas companies across the world. Each entry provides

a three-year summary, reserves and operations summary, full contact details, properties and operations and growth rates. Smaller sections give details of major oil and gas broken and traders, as well as principal industry associations. A company and a geographical index covers all parent, subsidiary and associate companies mentioned in the text.
Kenya A "Spy" Guide

Volume 1 Strategic Information and Developments Gale
Cengage
The increasing globalization of financial markets has resulted in a substantial increase in net private capital flows to developing countries, primarily the emerging economies of Asia, Eastern Europe, and Latin America. Until recently, investors have ignored opportunities in Africa. African markets caught

investors' attention in 1994 with Kenya's 179% U.S. dollar returns leading world equity markets, along with six of the world's top ten markets being in Africa. With low levels of correlation between African and developed world markets, the African exchanges represent ideal portfolio diversification opportunities. Moreover, rates of return for African investments are among the

highest returns in the world, yet African nations have not attracted the foreign direct investment that is required to change their economies. Dr. Clark's research examines the nature and evolution of Africa's emerging securities markets and their role in regional economic development. He shows that the continent's trading systems represent

many different trading arrangements without standardized rules and procedures. African countries continue to implement reforms to strengthen the development of financial markets, but without the appropriate market microstructure and custodial arrangements international investors will not provide African projects with the equity capital required for further development.

The government's role in the regulation of developing equity markets, therefore, is a critical element to the success of the reform process. Clark argues that freeing the economies to international competition will reap significant dividends for the continent's emerging economies. As the markets evolve, structural impediments will reduce, leading to increased

efficiencies and lower capital costs. Emerging Stock Markets, Factbook Lulu.com
The work is organised into sections on: global perspectives on capital markets; stock exchanges and capital markets within the African continent; regional perspectives within the continent; the Nairobi Stock Exchange; the role of the Nairobi Stock Exchange in economic development; education for

capital markets; exchange controls and foreign investors; privatisation; financial sector reforms; and the roles of education, women and children, art and culture in development. regulation. Increased activities at the stock exchanges attract new stockbrokers into the industry. This begs the question, how many more should be admitted with each capital market expansion? This publication set out an objective criterion for determining the optimal number of stock brokers at the Nairobi Stock Exchange. *The Handbook of World Stock,*

Derivative & Commodity Exchanges Port Washington, N.Y. : Alfred Publishing Company This book offers a panoramic view of the state of management research and practice in Africa. One of its objectives is to recognize current advances in management, applied economics and organizational research in some of the 54 nations that form the continent. The focus will be

on new developments across the region with a particular emphasis on the defining cultural and traditional elements and innovations that make African management different. [Kenya Export-Import Trade and Business Directory Volume 1 Strategic Information and Contacts](#) World Bank Publications Globalization and its relation to poverty reduction and development is not well

understood. The book identifies the ways in which globalization can overcome poverty or make it worse. The book defines the big historical trends, identifies main global flows - trade, finance, aid, migration, and ideas - and examines how each can contribute to undermine economic development. By considering what helps and what does not, the book presents policy recommendations to make globalization

more effective as a vehicle for shared growth and prosperity. It will be of interest to students, researchers and anyone interested in the effects of globalization in today's economy and in international development issues.
