In 2006, one of the hottest years on record, a “pizzly” was discovered near the top of the world. Half polar bear, half grizzly, this never-before-seen animal might be dismissed as a fluke of nature. Anthony Barnosky instead sees it as a harbinger of things to come. In Heatstroke, the renowned paleoecologist shows how global warming is fundamentally changing the natural world and its creatures. While melting ice may have helped produce the pizzly, climate change is more likely to wipe out species than to create them. Plants and

animals that have followed the same rhythms for millennia are suddenly being confronted with a world they're unprepared for—and adaptation usually isn't an option. This is not the first time climate change has dramatically transformed Earth. Barnosky draws connections between the coming centuries and the end of the last ice age, when mass extinctions swept the planet. The differences now are that climate change is faster and hotter than past changes, and for the first time humanity is driving it. Which means this time we can work to stop it. No one knows exactly what nature will come to look like in this new age of global warming. But *Heatstroke* gives us a haunting portrait of what we stand to lose and the vitality of what can be saved.

2020 Banff Mountain Book Competition Finalist in Adventure Travel In Journeys North, legendary trail angel, thru hiker, and former PCTA board member Barney Scout Mann spins a compelling tale of six hikers on the Pacific Crest Trail in 2007 as they walk from Mexico to Canada. This ensemble story unfolds as these

half-dozen hikers--including Barney and his wife, Sandy--trode north, slowly forming relationships and revealing their deepest secrets and aspirations. They face a once-in-a-generation drought and early severe winter storms that test their will in this bare-knuckled adventure. In fact, only a third of all the hikers who set out on the trail that year would finish. As the group approaches Canada, a storm rages. How will these very different hikers, ranging in age, gender, and background, respond to the hardship and suffering ahead of them? Can they all make the final 60-mile push through freezing temperatures, sleet, and snow, or will some reach their breaking point? *Journeys North* is a story of grit, compassion, and the relationships people forge when they strive toward a

common goal.

In the United States, some populations

suffer from far greater disparities in health than others. Those disparities are caused not only by fundamental differences in health status across segments of the population, but also because of inequities in factors that impact health status, so-called determinants of health. Only part of an individual's health status depends on his or her behavior and choice; community-wide problems like poverty, unemployment, poor education, inadequate housing, poor public transportation, interpersonal violence, and decaying neighborhoods also contribute to health inequities, as well as the historic and ongoing interplay of structures, policies, and norms that shape lives. When these factors are not optimal in a community, it does not

mean they are intractable: such inequities can be mitigated by social policies that can shape health in powerful ways. Communities in Action: Pathways to Health Equity seeks to delineate the causes of and the solutions to health inequities in the United States. This report focuses on what communities can do to promote health equity, what actions are needed by the many and varied stakeholders that are part of communities or support them, as well as the root causes and structural barriers that need to be overcome.

Inequality and poverty have returned with a vengeance in recent decades. To reduce them, we need fresh ideas that move beyond taxes on the wealthy. Anthony B. Atkinson offers ambitious

new policies in technology, employment, social security, sharing of capital, and taxation, and he defends them against the common arguments and excuses for inaction.
