Traumatic Dental Injuries Springer Science & Business Media
 Offering the most realistic NBDHE review and practice available, Mosby's Review Questions for the National Board Dental Hygiene Examination includes both a print book and companion website to prepare you for exam success. In the book, you'll review with more than 1,250 Component A practice questions — with each answer including a rationale for both correct and incorrect answer options. Online, you can review the same questions plus an additional 420 case-based items related to Component B in 1) practice mode or 2) timed, exam-simulation mode with randomized tests that match the number

and distribution of questions on the NBDHE. From a team of dental hygiene experts including lead editor Barbara Bennett, this Q&A resource is an excellent supplement to any NBDHE content review book! More than 1,680 multiple-choice questions provide comprehensive practice spanning the entire NBDHE, with 1,250+ items relating to Component A — more than six times the number of questions on the actual exam! — and 420 case-based questions related to Component B. Rationales accompany each question, fully explaining why each answer choice is either correct or incorrect and thus serving as secondary content review. Distribution of questions matches each category on the NBDHE test specifications, ensuring that you have adequate practice for each content area. An Evolve companion website includes all 1,250+ questions from the book plus additional case studies with

color images and accompanying questions, available either in practice mode with instant feedback or in exam-simulation format with results and feedback provided at the end of the exam. A test creator and timer on Evolve generates NBDHE-style tests that mimic the number and distribution of questions on the NBDHE and also provides realistic practice with time management during the exam. 16 detailed case studies on Evolve, each of which includes a patient medical/dental history, completed periodontal chart, oral radiographs, clinical photographs, and 20-35 multiple-choice questions for patients in the five main categories covered on the NBDHE (adult periodontitis, pediatric, geriatric, special needs, and medically compromised). References to text sources make it easy to review or find more information on specific topics.

National Health and Nutrition Examination Survey (Nhanes) Elsevier Health Sciences
The 2013-14 Oral Health Component of

NHANES is sponsored by the following organizations: The Centers for Disease Control and Prevention (CDC)/National Center for Chronic Disease Prevention and Health Promotion (NCCDPHP)/Division of Oral Health (DOH); The National Institute of Dental and Craniofacial Research (NIDCR); and The CDC/National Center for Health Statistics (NCHS). This component was developed by the DOH, NIDCR, and the NCHS. Some elements of the oral health component benefited from external collaboration. The periodontal assessment and questionnaire, were developed in collaboration with the American Academy of Periodontology and the Centers for Disease Control Periodontal Disease Surveillance Workgroup. The dental fluorosis imaging was developed in collaboration with the University of Manchester, Dental Health Unit. The purpose of this component is to assess the prevalence of oral conditions and diseases, such as edentulism, dental sealants, dental fluorosis, dental caries, and periodontal disease. A set of periodontal questions will be assessed to determine the extent to which these questions provide an accurate basis for estimating prevalence of clinically-measured periodontitis in the United States. Over the past 4 decades, oral and dental health characteristics collected in national surveys supported by the Federal Government have been critical for monitoring health status, risk factors for disease, access to preventive and treatment services, and other health characteristics among the general population and special subpopulations. These studies include the National Health and Nutrition Examination Surveys (NHANES) and the National Health Interview Surveys (NHIS), as well as special surveys such as the Hispanic Health and Nutrition Examination Survey and the children's and adult surveys conducted by the National Institute of Dental and Craniofacial Research. Oral and dental diseases affect many in the United States. Dental caries and tooth loss remain significant problems affecting the Nation's oral health. Although average dental caries rates for school-age children have declined, approximately one-fifth of children aged 6-11 years and two-fifths of children aged 12-15 years have experienced dental caries in permanent teeth. Additionally, nearly 90 percent of adults in the United States have experienced caries. Dental sealants, an effective caries prevention measure, have been underutilized in the United States, with about 30 percent of children aged 6-11 having them. The 2013-14 oral health

component will meet a critical need to continue monitoring trends in oral health status. The 2013-14 oral health component has a comprehensive caries evaluation that is similar to the assessment that was conducted during 1999-2004. Likewise, the assessments of dental sealants and fluorosis are similar to those conducted during 1999-2004. The full-mouth periodontal exam, which was first conducted in 2009-10, will continue for 2013-14 and a dental fluorosis imaging component will be introduced. In addition to the examination component, oral health-related questions will be asked during the home interview covering topics on dental usage, quality of life, health promotion/disease prevention, and periodontal health. The 2013-14 oral health exam will produce sufficient data to monitor six Healthy People 2020 oral health objectives (dental caries experience; untreated dental decay; no permanent tooth loss; complete tooth loss; periodontal disease; and dental sealants). A new oral health question on the receipt of prevention information from oral health care providers will produce data to monitor a new Healthy People 2020 health objective.
