Mediated Discourse as Social Interaction makes an explicit link between media studies and social interactionist discursive research where previously the two fields of study have been treated as separate disciplines. This text presents an integrated theory illustrated by ample concrete examples, bringing together the latest research in these two fields. It offers a critique to the sender-receiver model implicit in media studies, and argues for an analysis of media discourse as social interaction, on the one hand among journalists and newsmakers as a community of practice, and among readers and viewers as a spectating community of practice on the other. The book also argues for a coherent and interdiscursive methodology for the ethnographic study of the role of the news media in the social construction of identity and is based on a considerable body of ethnographic and textual analysis of both print and television news media. The

theory of mediated discourse presented in this volume will be of great interest to advanced undergraduates and postgraduates studying media studies, sociology of language, discourse analysis, interactional sociolinguistics, ethnography of communication and applied linguistics. It will also be welcomed by scholars and professionals involved in research in these areas.

Fascinating and compelling in equal measure this volume presents a critical examination of the multilayered relationships between engineering and business. In so doing the study also stimulates ethical reflection on how these relationships either enhance or inhibit strategies to address vital issues of our time. In the context of geopolitical, economic, and environmental tendencies the authors explore the world that we should want to create and the role of the engineer and the business manager in this endeavor. Throughout this volume the authors identify

periods of alignment and periods of tension between engineering and business. They look at focal points of the engineering-business nexus related to the development of capitalism. The book explores past and present movements to reshape, reform, or reject this nexus. The volume is informed by questions of importance for industry as well as for higher education. These are: What kinds of conflict arise for engineers in their attempts to straddle both professional and organizational commitments? How should professionals be managed to avoid a clash of managerial and professional cultures? How do engineers create value in firms and corporations? What kinds of tension exist between higher education and industry? What challenges does the neoliberal entrepreneurial university pose for management, faculty, students, society, and industry? Should engineering graduates be ready for work, and can they possibly be? What kinds of business issues are reflected in engineering education curricula, and for what purpose? Is there a limit to the degree of business hybridization in engineering degree programs, and if so, what would be the criterion for its definition? Is there a place in engineering education curricula for reflective critique of assumptions related to business and economic thinking? One ideal of management and control comes to the fore as the Anthropocene - the world transformed into an engineered artefact which includes human existence. The volume raises the question as to how engineering and business together should be considered, given the fact that the current engineering-business nexus remains embedded within an economic model of continual growth. By addressing macro-level issues such as energy policy, sustainable development, globalization, and social justice this study will both help create awareness and stimulate development of self-knowledge among practitioners, educators, and students thereby ultimately addressing the need for better informed citizens to safeguard planet Earth as a human life supporting system.

Contemporary Families at the Nexus of Research and Practice integrates current research with clinical theory to establish the most up-to-date, evidence-supported treatment options for unique contemporary families. Each chapter begins with a case study and genogram. A research section that explains family experiences outlined in the case study follows. Finally, a treatment section presents clinical theory and provides an evidence-supported practice. Together, each chapter demonstrates how theory gets translated into practice. Family forms discussed include families of divorce, stepfamilies, families of addiction, impoverished families, families of incarceration, families of cyberbullying, and families of murder victims. Whether you re a professional or a student, this book will provide both relevant research findings and explicit instruction and case material to augment your practice. "

Policy and Governance in the Water-Energy-Food Nexus Academic Press

This volume collects the results from the Politecnico di Milan's award-winning "Boa_Ma_Nhã, Maputo!" research-by-design project, which studied various transdisciplinary approaches to development in the context of the Global South. The challenges of urbanization are well known, but that only goes so far in aiding implementation. From local considerations like water access and housing rights to global issues like climate change, territorial development demands solutions that address the needs of the specific population while keeping such goals as sustainability and inclusion in mind. By focusing on a number of towns within the Maputo Province of Mozambique, and thus addressing many of the issues endemic to Sub-Saharan Africa, the research, structurally presented so as to aid those who may require introduction to the issue, makes a clear case in favor of always keeping the Water-Energy-Food (WEF) Nexus in mind when formulating development strategies for improving people's lives, as well as the wisdom of marrying academic findings with the insights accrued by local NGOs and institutions, thereby expanding the potential idea bank beyond the Eurocentric status quo that has tended to dominate the field.

A Guide to Econometric Methods for the Energy-Growth Nexus presents, explains and compares all the available econometrics methods pertinent to the energy-growth nexus. Chapters cover methods and applications, starting with older econometric methods and moving toward new ones. Each chapter presents the method and facts about its applications, providing step-by-step explanations about the ways the method meets the demands of the field. In addition, applied case studies and practical research steps are included to enhance the learning process. By touching on all relevant econometric methods for the energy-growth nexus, this book gives energy-growth researchers and students all they need to tackle the subject matter. Presents

econometric methods for short- and long-term forecasting
Provides methods and step-by-step explanations on the ways the method meets the demands of the field

The Security-Development Nexus Routledge

This book discusses the balance of priorities within the Water-Energy-Food (WEF) nexus and its impact on policy development and implementation, highlighting innovative perspectives in adopting a holistic approach to identify, analyse and manage the nexus component interdependencies. Due to increasing demands for natural resources, the WEF nexus has emerged as a response to the numerous global challenges. Addressing WEF challenges often involves balancing multiple and competing priorities and identifying and managing interrelations, synergies and trade-offs between the three components of the nexus. In this volume the authors focus on the dynamics between multiple stakeholders, such as governments, businesses, NGOs and local communities, when addressing WEF challenges by adopting a nexus approach. The book argues that effective engagement of multiple stakeholders can address difficulties arising from the introduction of an integrated approach to WEF policy design and implementation, increasing the potential benefits. The book also looks at the effect of international relations and regional power struggles on resolving cross-border WEF nexus issues. Case studies are drawn from Kenya, Central Asia, USA and Peru, highlighting key themes, such as how collaborative governance, enabled and facilitated by relational equity management, can be viewed as an innovative way to reconcile competing priorities. The combination of theoretical and case study chapters makes the book of interest to a wide audience, including scholars and advanced students of sustainable development, agriculture and food studies, water and energy policy design and governance, as well as to practitioners working in the fields of water, energy and food security.

This report continues the California Postsecondary Education Commission's ongoing examination of the nexus between postsecondary education and workforce development, focusing on the projected needs for skills and knowledge in a 21st century global economy. This is the second in a series of policy briefs developed for that project. The first brief provided an overview of the historical context surrounding the issue. This brief examines more deeply California's workforce needs in coming decades, and considers the skills that employers and economists see as vital to California's workforce. The next brief in the series will examine what the various segments in the postsecondary system are currently doing to address workforce needs. A fourth and final brief will draw the issues together and offer policy recommendations for state policymakers to help assure that our postsecondary education institutions are able to fulfill their respective roles in workforce development. The appendix contains: CPEC Employer's Survey for Postsecondary Education and Workforce Development Nexus Study, October 2006. (Contains 3 displays.).

We quantify the distortionary effects of nexus tax laws on Amazon's distribution network investments between 1999 and 2018. We highlight the role of two features of the expansion of Amazon's network: densification of the network of distribution facilities and vertical integration into package sortation. Densification results in a reduction in the cost of shipping orders, but comes at the expense of higher facility operating costs in more expensive areas and lower scale economies of processing shipments. Nexus laws furthermore generate additional sales tax liabilities as the network grows. Combining data on household

spending across online and offline retailers with detailed data on Amazon's distribution network, we quantify these trade-offs through a static model of demand and a dynamic model of investment. Our results suggest that Amazon's expansion led to significant shipping cost savings and facilitated the realization of aggregate economies of scale. We find that abolishing nexus tax laws in favor of a non-discriminatory tax policy would induce the company to decentralize its network, lowering its shipping costs. Non-discriminatory taxation would also entail lower revenue, however, as tax-inclusive prices would rise, resulting in a fall in profit overall. This drop and the decline in consumer welfare from higher taxes together fall short of the increases in tax revenue and rival profit, suggesting that the abolishment of nexus laws would lead to an increase in total welfare.

Academic Paper from the year 2019 in the subject Business economics - Accounting and Taxes, course: Tax compliance, language: English, abstract: The study set out to investigate the influence of tax education on tax compliance. It unearthed a lacuna between tax education and tax compliance which indicated an interplay between the theories of economic deterrent, reasoned action and the theory of planned behavior. Tax non-compliance was attributed to unfairness, dishonesty by colleagues submitting incorrect tax returns, and the complexity of the tax system and tax forms. The issue of tax compliance from SMEs in developing countries has remained a blighting problem for a long time. Despite tax education being diagnosed as the panacea for improving tax compliance from small business owners, the situation has not changed. A divide regarding the issue of tax education as influencing the collection of tax from SMEs still exists among researchers. Some scholars indicate a positive effect of tax education on compliance and others view tax education as a recipe for propagating tax evasion. However, for developmental projects to improve the lives of the citizenry, educating tax-payers aims to improve revenue collection from this category of business people. This study employed an exploratory concurrent mixed research approach on 98 SMEs operating within the Ojtiwarongo district.

Do States' Interpretations of Nexus Activities Align with States' Policy Adoptions of Economic Nexus?
While the 1992 Supreme Court case *Quill vs. North Dakota*, 112 S.Ct. 1904 (1992), re-affirmed a bright-line, physical presence nexus standard for sales and use tax purposes, the court case explicitly left open the question of whether the same nexus standard applied to state corporate income taxes. The state taxation literature has extensively examined state corporate income tax characteristics and revenue implications; however, little research has focused on which types of corporate activities result in a state asserting nexus. Using data from the BNA Survey of State Tax Departments, this study investigates 95 nexus-creating activities as reported by states from 2002-2010 and their association with states' adoption of economic nexus. In other words, we seek to better understand which nexus-creating activities of businesses drive the corporate income tax economic nexus adoption by states. Through a unique use of both behavioral survey data and archival data, we provide a rich picture of how state policy adoptions of economic nexus align with state interpretations or perceptions. Results show that

economic nexus adoptions are more common in states that perceive investment in pass-through entities, licensing intangibles, engaging in financial activities, or inspecting installation as creating nexus within the state, and are less likely in states that view attending trade shows or checking customer inventories as creating nexus. These results contribute to the state taxation literature by providing evidence of the primary activities that contribute to the economic nexus standard, which have implications for state tax researchers and policymakers alike.

Water-Energy-Food Nexus and Climate Change in Cities
Routledge
This book aims to contribute to the transdisciplinary study of the water-energy-food (WEF) nexus in cities and to help policy makers adopt a more integrated approach to natural resources management in urban environments to face the challenges and threats of climate change. This approach is based on a

multidimensional scientific framework that seeks to understand the complex and non-linear interrelationships and interdependencies between water-energy-food under climate change and to generate solutions to reduce trade-offs among development goals and generate co-benefits that help encourage sustainable development and contribute to the achievement of SDGs, mainly SDG 11 (make cities and human settlements inclusive, safe, resilient and sustainable) and SDG 13 (take urgent action to combat climate change and its impacts). Governing the WEF nexus in cities is one of the greatest resource challenges of our time, as cities consume large amounts of WEF, but one that can also generate relevant alternatives with which to tackle climate change. To help fostering these alternatives, this book analyzes the governance, institutional and political economy factors that determine the effectiveness of the nexus approach and reviews the potential, the benefits and the policy implications of the adoption of the WEF nexus approach at the urban level. Through a series of hands-on cases, chapters in this book present the opportunities of the WEF nexus approach to achieve innovation and transformative change and discuss concrete areas of synergy and policy initiative to raise urban resilience. *Water-Energy-Food Nexus and Climate Change in Cities* will serve both as a guide for policy makers as well as a useful resource for students and researchers in fields such as urban studies, public health, environmental sciences, energy studies and public policy interested in learning how cities can represent possibilities to navigate and manage sustainability from local to global.

"The natural ecosystems perform essential life-support services upon which human civilization depends. However, the human

population is growing at an unprecedented rate putting tremendous pressure on the limited resources that the earth could provide. The United Nations Population Fund predicts that by 2050, the world's population may reach 10 billion w, with more than 70% of these people living in cities (UNFPA, 2020). In a world stretched thin for resources and under the threat of global biodiversity loss and climate change, our lifestyles decisions are putting the planet at risk. These realities contrast with the characteristics of a sustainable society to function through cyclical support systems promoting harmony with nature and providing for meaningful livelihoods a sustainable living. UN Sustainable Development Goals defines sustainable living as understanding how our lifestyle choices impact the world around us and finding ways for everyone to live better. Sustainable living and lifestyles for the first time appear in the Sustainable Development Goals - 4 Education and 12.8 Responsible Consumption (SDGs, 2015). Studies have found that living a sustainable lifestyle has positive effects on human well-being and Happiness. Scholars define well-being differently depending on the local culture and norms, political and socio-economic

conditions, geography, and ecological circumstances in which the people live. Derived from these studies and discussions, human well-being is defined as the community's ability to live a life they value. Values comprise culture, society, access to land and natural resources (ecology), and material factors like income-generating opportunities (economic), which stimulate people's understanding of their relationships with nature and possible innovations in policies and processes that benefit human nature. Happiness, known in psychological research, study for analysis of the experiences and behaviors of individuals or groups, as subjective well-being, is considered an emotional and situational emotion (Diener, 2000). Thus, Happiness is commonly thought of as an individual characteristic for which each person is solely responsible (Cloutier & Pfeiffer, 2015). Meanwhile, research on human well-being, Happiness, quality of life, and their association with the natural environment has increased in the past decades. "
