This book addresses the management and flow of product-related activities and information across a manufacturing company. Written in a narrative style, it will be of interest to executives, managers, business process specialists, IT architects, academics, and Master and Bachelor students. In mid-2019, the subject proposed for an MBA research project was to find out, for a newly appointed CEO of a machine tool manufacturer, what happened with the company's products from their beginning to their end. The book follows the project's three-fold approach across the company's sites. Key individuals in more than forty Departments, Groups and Sections were interviewed to understand the flow of product-related activities and information, and the applications supporting them. Business processes and operating procedures were examined. Interviewees were asked about the main issues they faced in their product-related activities and their suggestions for improvement. The book describes some of the project's deliverables including:* Identification of the many ways in which different products evolve from different starting situations to different end points* Development of simple models to help explain what happens with products from their beginning to their end of life* Proposals for next steps to benefit from the project's findings Dr. John Stark, a thought and practice leader in the field of PLM, has advised more than 100 manufacturing companies, and is the author of "Product Lifecycle Management: 21st Century Paradigm for Product Realisation", the most frequently cited publication about PLM.
