Online Distance Education: Towards a Research Agenda offers a systematic overview of the major issues, trends, and areas of priority in online distance education research. In each chapter, an international expert or team of experts provides an overview of one timely issue in online distance education, summarizing major research on the topic, discussing theoretical insights that guide the research, posing questions and directions for future research, and discussing the implications for distance education practice as a whole. Intended as a primary reference and guide for distance educators, researchers, and policymakers, Online Distance Education addresses aspects of distance education practice that have often been marginalized, including issues of cost and economics, concerns surrounding social justice, cultural bias, the need for faculty professional development, and the management and growth of learner communities. At once soundly empirical and thoughtfully reflective, yet also forward-looking and open to new approaches to online and distance teaching, this text is a solid resource for researchers in a rapidly expanding discipline.

Learn to measure the results of your technology-based learning programs with this step-by-step guide. Few would dispute the convenience, cost, and efficiency of learning through technology. Whether e-learning, blended learning, or mobile learning, it's usually just in time, just enough, and just for the user. The challenge with e-learning lies in proving its value and showing the results. The cost savings and the outcome of the learning program must be considered to determine the true value of these programs. Renowned ROI experts Jack and Patti Phillips have joined with Tamar Elkeles, the chief learning officer for Qualcomm, to provide this guide for measuring the success of e-learning programs. By following the steps prescribed in this book, designers and developers can significantly affect the success of e-learning at the application and impact levels, ultimately making the ROI easy to develop. Part I of the book outlines the steps that make up the logical approach to evaluation using the ROI Methodology. Part II describes how the methodology has been applied in real-life case studies. These studies represent a variety of industries and applications and are written by experienced professionals in the field of learning and development.

Several case studies showed that introducing Person-Centered e-Learning (PCeL) is more demanding with respect to time, competence, and facilitative skills than conventional teaching. This is the starting point for the basic research question underlying this research: How can successfully conducted PCeL scenarios be captured and disseminated to enable subsequent reuse across

organizational boundaries? For this enterprise the author proposes a pattern-based approach to PCeL. Note that, in this context, the development of facilitative dispositions in educators is considered essential but is outside the scope of this book. The pattern approach is rooted in the field of architecture, and today is a widely accepted method to enable reuse of expert experience particularly in software design. Generally, a pattern generically describes the core of the solution to a problem that is frequently recurring within a specific context. This publication introduces a methodology for PCeL pattern mining, description, scenario modeling using the Unified Modeling Language (UML), instantiation on learning platforms, and evaluation based on BLESS, a layered model of blended learning systems. The patterns provide sets of Web templates that employ and arrange basic functionality of current Web-based learning platforms to generically specify how to optimally support the underlying learning scenario. The whole PCeL pattern collection is stored in a repository that is organized into different pattern packages."

Initiate innovation and get things done with a guide to the process of academic change Change Leadership in Higher Education is a call to action, urging administrators in higher education to get proactive about change. The author applies positive and creative leadership principles to the issue of leading change in higher education, providing a much-needed blueprint for changing the way change happens, and how the system reacts. Readers will examine four different models of change and look at change itself through ten different analytical lenses to highlight the areas where the current approach could be beneficially altered. The book accounts for the nuances in higher education culture and environment, and helps administrators see that change is natural and valuable, and can be addressed in creative and innovative ways. The traditional model of education has been disrupted by MOOCs, faculty unions, online instruction, helicopter parents, and much more, leaving academic leaders accustomed to managing change. Leading change, however, is unfamiliar territory. This book is a guide to being proactive about change in a way that ensures a healthy future for the institution, complete with models and tools that help lead the way. Readers will: Learn to lead change instead of simply "managing" it Examine different models of change, and redefine existing approaches Discover a blueprint for changing the process of change Analyze academic change through different lenses to gain a wider perspective Leading change involves some challenges, but this useful guide is a strong conceptual and pragmatic resource for forecasting those challenges, and going in prepared. Administrators and faculty no longer satisfied with the status quo can look to Change Leadership in Higher Education for real, actionable guidance on getting change accomplished.

Quality Assurance in Distance Education and E-Learning: Challenges and Solutions from Asia documents the existing regulatory framework covering quality assurance (QA) systems in distance education (DE) in a number of Asian countries. It draws on the knowledge and experience of 16 selected DE/e-learning institutions of Asia and reveals the respective development of QA systems and procedures within these providers/programmes. The endeavour towards developing QA systems through various stages of testing and development is in response to the growing public concern for the quality of DE as well as staff aspirations for quality. This book, through the selection of cases from the aforementioned institutions, covers a wide range of QA systems and perspectives of quality in DE. These cases present good practices in QA for DE/e-learning, analyse challenges in assuring the quality of DE products and services, offer possible solutions to meet those challenges, and present lessons for other DE providers.
