 Advance Care Planning(ACP)has long been a staple of caring for people with serious illness. Over its history, it has been defined in different ways. Clinicians, researchers, patients, and the public have developed a variety of perspectives about the many aspects of ACP, ranging from the definition to the timing, goals, outcomes, and value of ACP. To better understand the challenges and opportunities for ACP, acknowledge and highlight divergent viewpoints, and examine what is empirically known and not known about ACP and its outcomes, the National Academies of Sciences, Engineering, and Medicine's Roundtable on Quality Care

for People with Serious Illness hosted a virtual public workshop, Advance Care Planning: Challenges and Opportunities, on October 26 and November 2, 2020. The workshop explored the paradox of ACP, its evidence base, ways to think differently about ACP, and various approaches to making it more effective. This Proceedings of a Workshop summarizes the presentations and discussions from that workshop.

 Health literacy in practice requires the development of techniques that ensure that the patient can better access information, understand its content, know how to use this information, and make better health decisions. If the patient makes better health decisions, there are immediate reflexes in health outcomes. The aim is to develop an approach based on the commitment and creation of an atmosphere of trust that reduces uncertainty, anxiety, and embarrassment based on a process of assertive, clear, and positive communication (ACP model). The Handbook of Research on Assertiveness, Clarity, and Positivity in Health Literacy brings the consolidation of knowledge, strategies, and techniques to improve health literacy. This book discusses the importance of making sound health decisions: decisions that can save lives, prevent premature deaths, avoid hospitalizations and abusive resources to medical emergencies, and improve overall health outcomes for the individual, family, community, and society. Covering topics such as dietary guidance, health behavior change models, and medication reconciliation, this resource has theoretical and practical aspects essential to health information libraries, hospitals, clinics, health centers, health schools, patient associations, health professionals, medical students, researchers, professors, and academicians.

 This book is a research monograph that explores the implications of the strongest minimalist thesis from an antisymmetric perspective. Three empirical domains are investigated: nominal root compounds in German and English, nominal gerunds in English and their German counterparts, and small clauses in Russian and English. A point of symmetry that has the potential of stalling the derivation emerges in the derivation of all of these constructions. Building on certain assumptions on how Merge works, this book shows that the points of symmetry can all be resolved in the same way; despite the fact that the three empirical domains under investigation are standardly derived

from distinct structural configurations, such as head-head merger in the case of root compounds, head-phrase merger as it arises from standard complementation/predication structures for nominal gerunds, and phrase-phrase merger in small clauses. This book is of interest to all researchers working on syntax and its interfaces.

 Material Falsity and Error in Descartes's Meditations approaches Descartes's Meditations as an intellectual journey, wherein Descartes's views develop and change as he makes new discoveries about self, God and matter. The first book to focus closely on Descartes's notion of material falsity, it shows how Descartes's account of material falsity – and correspondingly his account of crucial notions such as truth, falsehood and error – evolves according to the epistemic advances in the Meditations. It also offers important new insights on the crucial role of Descartes's Third Meditation discussion of material falsity in advancing many subsequent arguments in the Meditations. This book is essential reading for those working on Descartes and early modern philosophy. It presents an independent reading on issues of perennial interest, such as Descartes's views on error, truth and falsehood. It also makes important contributions to topics that have been the focus of much recent scholarship, such as Descartes's ethics and his theodicy. Those working on the interface between medieval and modern philosophy will find the discussions on Descartes's debt to predecessors like Suárez and Augustine invaluable.

The Challenges and Opportunities of Advance Care Planning John Benjamins Publishing Company

Previous research has indicated that what constitutes a good death is heterogenic and complex although there are some recurrent themes and similarities regardless individual background factors. Studies on advance care planning (ACP), i.e. making proactive plans regarding content of care and treatment limitations, on nursing home (NH) patients are rare. Positive effects of ACPs are shown, but also that these often are lacking. The overall aim with this thesis was to explore the perceptions of a good death from the perspective of patients with severe illness and to investigate, from different perspectives, experiences of ACP in a NH context. In paper I, patients with cancer in a palliative phase were interviewed on their perceptions of a good death. Death was viewed as a process and previous experiences on the death of others influenced their own perceptions. A good death was associated with living with the prospect of imminent death, preparing oneself and others for one's death and dying comfortably, e.g. without suffering, with independence and with social relations intact. Some were comforted by their belief that death is predetermined, and that after death, there is something else. Others felt uncomfortable when they viewed death as the end of the existence. In paper II, nurses and physicians were interviewed on their experiences of the factors that shape the ACP process in NHs. Exploration of the patient's preferences regarding content of care and treatment limitations was important, as well as integration of the patient's preferences and the views of the family members and staff concerning these questions. ACP documentation had to be clear, updated and available for staff and the implementation and reevaluation of ACP were also considered important, according to the participants. Significance of clinicians' perceiving beneficence as well as fear of accusations of maleficence were shown to be essential factors to contemplate. In a retrospective chart review (paper III), medical records of 367 deceased NH patients were analysed. A high prevalence of ACP was shown, using two different definitions of ACP (ACP I and ACP II). Moreover, adherence to the ACP content was strong and positive associations were seen between ACP and variables of the three research aims, such as: diagnosis (dementia), physician attendance at NH and end-of-life (EOL) care. In paper IV, family members of deceased NH patients were interviewed on their experiences of ACP in NHs. EOL issues were challenging to talk about, although the family members appreciated staff raising these questions. The patient's preferences were sometimes explicitly or implicitly communicated. However, in some cases, family members had a feeling of the patient's preferences, although they had not been clearly communicated. Everyday details symbolised staff commitment. The family members viewed the nurse as central. The physician was described as absent and ACP meetings often went unnoticed. Both involvement and lack of involvement could cause the family members feelings of guilt. In conclusion, we found that what constitutes a good death is highly individual, although recurrent themes are seen. EOL conversations are important and challenging and need staff training and experience. It seems important to support healthcare staff not only to initiate ACP in NH patients, but also to involve the patient and family members in the ACP and planning EOL care. Making proactive plans regarding content of care including treatment limitations, could enable patient autonomy, optimise the chances for the patient to experience a good death and enhance for the family members during the dying trajectory and after the patient's death.

The best evidence-based guide to complementary and alternative medicine (CAM) for practicing physicians! This new resource provides the comprehensive guidance on CAM therapies physicians need to responsibly counsel their patients and integrate these techniques into their own practices. Features: *Principles and Practice of Hospital Medicine* Emereo Publishing With "integrated water resources management" (IWRM) the current buzzword in international circles, the real question is: how to operationalise a truly multidisciplinary approach to the effective management of shared watercourses. Based largely on the actual experience of HELP (Hydrology for the Environment, Life and Policy), the overall aim of the book is to produce a series of case studies from around the world (from the Aral Sea to

Zimbabwe) that demonstrate how the "gaps" between hydrology, water law and management are actually bridged in practice. Is hydrological data relevant and used in the formulation of national and international water law and policy? Cases cited include examples of where this has happened and been successful or unsuccessful and where this has not happened and led to problems. This will act as a guide to how future water laws and policies can be made more effective via the use of accurate and up to date hydrological information.

Symmetry Breaking in Syntax and the Lexicon IWA Publishing

The word revolution has a number of definitions (The American Heritage Dictionary, 2006). The one most pertinent to this series and volume is 'a sudden or momentous change in a situation'. Recent years have seen an unprecedented explosion of interest in unfolded proteins in all of their various forms. Coupled with this increase in interest we have seen momentous changes in the way unfolded proteins are viewed. Two particular paradigms have come under close scrutiny: unfolded proteins are disordered random coils devoid of persistent structure, and protein function first requires protein structure. The first of these is currently a hotly debated subject. The second paradigm we can safely claim has been overturned. There is a second definition of revolution that is quite relevant to a significant portion of the work reviewed herein, in particular those chapters dealing with local and persistent structure in unfolded proteins. That definition is 'a turning or rotational motion about an axis' (The American Heritage Dictionary, 2006). About four decades ago, Charles Tanford (1968) demonstrated that highly denatured proteins possess hydrodynamic properties consistent with Paul Flory's random coil (Flory, 1969). Given that the Flory random coil definition included the stipulation that conformers making up the denatured state ensemble would differ in energy by just a few kT, there has been the assumption that denatured states must therefore be completely random in nature with no persistent structure or biases towards particular conformers. Notably however, Tanford did note the random coil-like hydrodynamic data he obtained did not necessarily rule out the presence of structure in denatured proteins (Tanford, 1968). Around the same time, Sam Krimm and M. Lois Tiffany noted that the CD spectra they obtained for proteins in the presence of high concentration of chemical denaturants had similarities to spectra obtained for homopolymers of proline, lysine, and glutamic acid in water (Tiffany and Krimm, 1968a, 1968b, 1973, 1974). Homopolymers of these residues were known to adopt the left-handed polyproline II conformation, leading Tiffany and Krimm to hypothesise that highly denatured proteins possess significant polyproline II helix content. Of these two views, that espousing the lack of structure in denatured proteins became more widely adopted and was, over time, adopted as a central paradigm in protein folding. As several of the chapters in this volume note, a Tiffany and Krimm-like view appears to be, to some extent, the more correct one. The level to which it is correct is still unknown, although it is clear that the polyproline II helical conformation is not the only, perhaps not even the most common, persistent conformation present in unfolded proteins. Thus we have come through a full circle or revolution. (from the preface)
