Essay from the year 2015 in the subject Economics - Finance, grade: 2.1, , language: English, abstract: The financial ratios are the most common and widespread tools to examine an enterprise' financial condition. They can be used to compare the performance of the business over the period of time or different firms in different industries. However, the ratios constitute just a raw computation of the financial standing and don't take into consideration information such as the size of enterprise. The financial ratio analysis allows creditors and investors to understand the financial position of the business and areas, which have to be improved. The ratio analysis allows the industries to determine their strengths and weaknesses. The financial ratios are classified into the five main categories: profitability, liquidity, working capital management, capital structure and stock market

performance.

Seminar paper from the year 2008 in the subject Business economics - Accounting and Taxes, grade: 1,3, University of Applied Sciences Berlin, course: Financial Management, 14 entries in the bibliography, language: English, abstract: Executive Summary Financial analysis can be conducted internally or externally to assess a company's financial condition by analyzing mainly its financial statements. A company's overall financial condition can be appraised using ratio analysis to examine its key figures in leverage, liquidity, efficiency and profitability. Within this paper, next to the

theoretical explanations, the different ratios will be observed for the two retail companies Wal-Mart Stores Inc. (Wal-Mart) and Target Corp. (Target). Due to its large contribution to the US gross domestic product (GDP), the retail industry and its most important companies for the US, Wal-Mart and Target are examined more closely. Wal-Mart is a world-wide operating discount store, which engaged 2.1 million employees in January of 2008 and whose revenues made up about 2.1 % of US GDP. Compared to Wal-Mart, the upscale discounter Target employs 366,000 people within the US. Within this paper the following leverage ratios, which are computed to evaluate a company's ability to meet financial obligations, will be theoretically explained and then examined more closely for the US discounters Wal-Mart and Target: the debt-ratio, the debt-equity ratio and the times-interest-earned ratio. The computed leverage ratios need to be confronted with the liquidity ratios to investigate, whether a company can also cover its short-term debts in order to survive and to then meet long-term debt obligations. Within this paper the current ratio, the quick ratio and the cash ratio will be regarded more closely for Wal-Mart and Target. How efficiently a company makes usage of the invested current and fixed assets is detected using efficiency ratios, like the sales-to-assets ratio, the days in inventory ratio

*The Ghost in the Balance Sheet* Forgotten Books

Excerpt from *The Journal of Accountancy, 1922, Vol. 34* This topic will receive further attention later in this article. Form of Balance-sheet Much has been written on the subject of a standard form of balance-sheet, but a casual reference to a few forms prepared by banks and bankers, which have been selected at random, discloses a striking lack of uniformity among those commonly used. I should like to put the following question: In submitting a certified balance-sheet should the accountant follow the form prescribed by the client's bank or by the broker who handles his paper, or should he adopt a form of his own, which in his judgment, owing to the peculiar circumstances of the case, sets forth clearly the client's financial condition, with particular emphasis upon certain outstanding features disclosed by the audit? I do not propose to answer that question, but for the

purpose of laying the foundation for discussion, which I hope will follow, I shall mention some of the significant variations in three selected balance-sheet forms, designated for convenience as "A", "B" and "C". Current Assets: Balance-sheet "A" classifies as current assets, cash, notes and accounts receivable, inventories, quickly marketable securities and notes and accounts due from officers, stockholders and employees. Balance-sheets "B" and "C" include as current all of the foregoing assets except notes and accounts receivable from officers, stockholders and employees. Such items in many instances may be slow in realization, but in the other cases they may be quick assets and, for the purpose of setting forth the assets available for meeting current liabilities, they should be included under those conditions as current assets. Balance-sheets "A" and "B" make no provision for subdividing the asset items for notes, accounts receivable, merchandise or securities, so as to show what has been pledged as security for loans, while balance-sheet "C" assembles in a separate group all pledged current assets (notes and accounts receivable, acceptances, merchandise and securities).
