This manual is a comprehensive guide to the causes and treatment of infertility. Beginning with a section on male and female physiology, the text then discusses various causes of infertility, such as hypothalamic pituitary dysfunction, endometriosis, male factors, the cervical factor and unexplained infertility. The final section explores assisted reproductive technology, including In Vitro Fertilisation (IVF), cryopreservation of embryos, intra-cytoplasmic sperm injection (ICSI) and fertility preservation in female cancer patients. A final chapter presents ethical, moral and religious issues. Authored by recognised specialists in the USA, Europe and Egypt, this book contains more than 400 clinical and scientific images and illustrations to depict different conditions and surgical techniques.

The Tenth International Conference on Logic Programming, sponsored by the Association for Logic Programming, is a major forum for presentations of research, applications, and implementations in this important area of computer science. Logic programming is one of the most promising steps toward declarative programming and forms the theoretical basis of the programming language Prolog and its various extensions. Logic programming is also fundamental to work in artificial intelligence, where it has been used for nonmonotonic and commonsense reasoning, expert systems implementation, deductive databases, and applications such as computer-aided manufacturing. David S. Warren is Professor of Computer Science at the State University of New York, Stony Brook. Topics covered: Theory and

Foundations. Programming Methodologies and Tools. Meta and Higher-order Programming. Parallelism. Concurrency. Deductive Databases. Implementations and Architectures. Applications. Artificial Intelligence. Constraints. Partial Deduction. Bottom-Up Evaluation. Compilation Techniques.

NEW YORK TIMES BESTSELLER! For fans of Hidden Figures and Radium Girls comes the remarkable story of three Victorian women who broke down barriers in the medical field to become the first women doctors, revolutionizing the way women receive health care. In the early 1800s, women were dying in large numbers from treatable diseases because they avoided receiving medical care. Examinations performed by male doctors were often demeaning and even painful. In addition, women faced stigma from illness—a diagnosis could greatly limit their ability to find husbands, jobs or be received in polite society. Motivated by personal loss and frustration over inadequate medical care, Elizabeth Blackwell, Elizabeth Garrett Anderson and Sophia Jex-Blake fought for a woman's place in the male-dominated medical field. For the first time ever, *Women in White Coats* tells the complete history of these three pioneering women who, despite countless obstacles, earned medical degrees and paved the way for other women to do the same. Though very different in personality and circumstance, together these women built women-run hospitals and teaching colleges—creating for the first time medical care for women by women. With gripping storytelling based on extensive research and access to archival documents, *Women in White Coats* tells the courageous history these women made by becoming doctors, detailing the

boundaries they broke of gender and science to reshape how we receive medical care today.

Patients at Risk: The Rise of the Nurse Practitioner and Physician Assistant in Healthcare exposes a vast conspiracy of political maneuvering and corporate greed that has led to the replacement of qualified medical professionals by lesser trained practitioners. As corporations seek to save money and government agencies aim to increase constituent access, minimum qualifications for the guardians of our nation's healthcare continue to decline—with deadly consequences. This is a story that has not yet been told, and one that has dangerous repercussions for all Americans. With the rate of nurse practitioner and physician assistant graduates exceeding that of physician graduates, if you are not already being treated by a non-physician, chances are, you soon will be. While advocates for these professions insist that research shows that they can provide the same care as physicians, patients do not know the whole truth: that there are no credible scientific studies to support the safety and efficacy of non-physicians practicing without physician supervision. Written by two physicians who have witnessed the decline of medical expertise over the last twenty years, this data-driven book interweaves heart-rending

true patient stories with hard data, showing how patients have been sacrificed for profit by the substitution of non-physician practitioners. Adding a dimension neglected by modern healthcare critiques such as *An American Sickness*, this book provides a roadmap for patients to protect themselves from medical harm. WORDS OF PRAISE and REVIEWS Al-Agba and Bernard tell a frightening story that insiders know all too well. As mega corporations push for efficiency and tout consumer focused retail services, American healthcare is being dumbed down to the point of no return. It's a story that many media outlets are missing and one that puts you and your family's health at real risk. --John Irvine, *Deductible Media* Laced with actual patient cases, the book's data and patterns of large corporations replacing physicians with non-physician practitioners, despite the vast difference in training is enlightening and astounding. The authors' extensively researched book methodically lays out the problems of our changing medical care landscape and solutions to ensure quality care. --Marilyn M. Singleton, MD, JD A masterful job of bringing to light a rapidly growing issue of what should be great concern to all of us: the proliferation of non-physician practitioners that work predominantly inside algorithms rather than applying years of training, clinical knowledge, and experience. Instead of a patient-first mentality, we are increasingly met with the sad statement of Profits Over Patients, echoed by hospitals and health insurance companies. --John M. Chamberlain, MHA, LFACHE, Board Chairman, Citizen Health A must read for patients attempting to navigate today's healthcare marketplace. --Brian Wilhelmi MD, JD, FASA

There are approximately 55,000 practicing ob/gyns in the United States. The obstetrics and gynecology residency training authority (the Accreditation Council for Graduate Medical Education) has now pushed ambulatory primary and preventative care to the top of its list for residency training. Interest in the area of ambulatory gynecology is not just growing in the field of ob/gyn, however; family and primary care practitioners, emergency room physicians, and advance practice nurses all must know how to diagnose, manage, and treat gynecological conditions. Since office technology has expanded and decision-making has become increasingly complex, physicians need a guide through the endless list of treatment options for commonly presenting gynecologic disorders. Ambulatory Gynecology gives practitioners tools for diagnosis, investigation and management of these disorders, including decision-making algorithms. The text is evidence-based. From endocrine disorders to breast disease, preventative measures for osteoporosis to management of an abnormal pap smear, from adolescent gynecology to menopause, this book is crucial for office-based physicians to feel confident practicing in all areas of gynecology.

On Friday, the 8th of October 1976, a one day Symposium on Cardiac Pacing, supported by an educational grant from Vitatron Medical, was held at the Sheraton Boston Hotel in Boston, Massachusetts. The intent of the Organizing Committee was to provide a concentrated overview of various aspects of cardiac pacemaker technology ranging from historical aspects, indications, electrode design, energy sources, engineering concepts, detection of malfunction and followup of implanted systems. A look into future trends was also emphasized. The

audience consisted of physicians from all parts of the United States with a special interest in pacemaker systems. Their comments, questions, and description of their own experiences, which arose during the discussion period at the end of the program, extended the breadth of the information provided. J. WARREN HARTHORNE ACKNOWLEDGEMENT The editors of this Colloquium on Cardiac Pacing (J. W. H. and H. J. Th. T. ) acknowledge the patient understanding and support of their wives, Christa and lise through the long hours at night and weekends during which these proceedings were made ready for publication. A special note of appreciation is extended to Dr. Harthorne's secretary, Miss Stephanie Ann Murray, who transcribed the original tape-recorded presentations and typed and retyped the many corrected versions thereafter - all done without complaint and with ultimate good humor. La presente selección de viviendas es un buen testigo de esto. La elección obedece a un criterio común: todas ellas construyen una idea contemporánea de paisaje, fruto de una mirada actual respetuosa con la identidad territorial y la memoria. Abordan, desde distintas perspectivas, el reto de la inserción en el paisaje basada en el diálogo. Se trata de respuestas que no obvian la potencia y singularidad de lo existente pero que se sitúan a su altura, sin renunciar a su capacidad transformadora y a la construcción de lo contemporáneo.
