"70 Times 7 Math (An All-In-One Math Book for Grades Kindergarten Through 5th)" is, as suggested by the title, an "all-in-one" math textbook for students in kindergarten through 5th grade. The first three chapters are taught to students in grades kindergarten through 2nd, while all six chapters are studied by students in grades 3rd-5th. You can review the table of contents to note the wide variety of subjects students will learn about in this book. It essentially covers the same material that you would expect to find in any other math textbook for grades kindergarten through 5th but in fewer pages and with an approach that is both more enjoyable and easier to understand. Learning math has truly never been easier! Please note, however, that while only one textbook is needed, the homework books, the test books, as well as several sets of digital flashcards that supplement the program are sold separately. One of the most unique things about this curriculum is the design of the textbook pages. The design provides an organized and time-efficient way of introducing new problems and of reviewing what has already been learned. Note that not every page has a problem to solve. Some have songs with familiar tunes to help students learn, amongst other things, how to

identify a shape by the number of sides it has. There are colorful illustrations to help students learn about fractions, geometric figures, graphs, measurement, and much more. For more information about this book, including the electronic versions available for teachers to guide students through the material and the electronic versions for students where tutorial videos are available, please read the preface that follows the table of contents in this book or visit our website at <https://habakkuk20.wixsite.com/mysite>.

NEW YORK TIMES bestselling author Greg Tang takes on the times tables, teaching kids innovative ways to multiply numbers and derive answers WITHOUT memorization. Four is very fast to do when you multiply by 2. Here's a little good advice -- please just always double twice! BEST OF TIMES gives kids an intuitive understanding of multiplication, encouraging them to arrive at answers on their own rather than memorizing the times tables. A child who can multiply by two, for instance, can multiply by four and even eight! Likewise, times six builds on times two and times three. With his common-sense approach, Greg Tang encourages kids to solve problems creatively, building both their skills and their confidence.

ANSWER KEY Updated in July, 2015. Now includes an answer key. (If you would also like to see guided examples at the beginning of each chapter, check out the author's newer multiplication book: Search for the following ISBN: 1468080261.) AUTHOR Chris McMullen earned his Ph.D. in physics from Oklahoma State University and currently teaches physics at Northwestern State University of Louisiana. He developed the Improve Your Math Fluency series of workbooks to help students become more fluent in basic math skills. CONTENTS This practice book is designed to help students develop proficiency with their multiplication skills by offering ample practice. This book is conveniently divided up into four parts: Part 1 reviews single-digit multiplication facts since swift knowledge of these is critical toward multiplication mastery. Part 2 is limited to multi-digit numbers times single-digit numbers. This way students are not challenged with too much too soon. Part 3 focuses on two-digit multiplication. Part 4 features a variety of multi-digit multiplication problems. An introduction describes how parents and teachers can help students make the most of this workbook. A multiplication table is provided to help students who are just learning their multiplication facts. PRACTICE This is a practice workbook geared toward practicing problem-solving skills. As such, it consists of worksheets with practice problems in the spirit of old-fashioned practice sheets. This is suitable for students who need to practice basic skills, and is effective for many students. It is not one of the modern math textbooks that are designed to entertain bored students. PHOTOCOPIES The copyright notice permits parents/teachers who purchase one copy or borrow one copy from a library to make photocopies for their own children/students only. This is very convenient if you have multiple children/students or if a child/student needs additional practice.

They can memorize the tables then test it afterwards. There is no magic formula for learning the times tables, they must do it the hard way which is to memorize them by heart. It will take months so there is no need for parents to get upset and panic if they aren't able to memorize it in an instance. Remember each child is different. Just ask your child to memorize these times tables one by one. *40 Fun-Tabulous Puzzles for Multiplication, Division, Decimals, Fractions, and More Math Games/Fun To Teach*

The ultimate guide for parents who dream of having a little less chaos and a lot more time for the good things in life Written by mother of five, Nicole Avery, this book shows harried parents how, with just a bit of planning, family life can become easier to manage, less stressful, and decidedly more fun. "Dream on," you say? "I might as well try to herd cats as to get my kids to follow a lot of arbitrary rules!" And Nicole would agree, which is why Planning with Kids isn't like any other parenting guide out there. It was inspired by Nicole's blog of the same name, which, over the past three years, has garnered a huge audience of likeminded parents who have achieved nothing short of miraculous results following her advice. While other prescriptive guides offer mums and dads cook-cutter solutions to the challenges of raising kids, this handbook focuses on one simple, straightforward idea: by implementing a few simple strategies for how you do things, you'll make more time for you to be you and your kids to be kids. You'll find strategies for streamlining and enhancing everything from the routines of daily life, to family relationships, to budgeting and finances, playtime and much more! Contains a full section on menus and cooking, including recipes, supported online by a planning-with-family meal planner Divided into sections so that readers can dip-in and dip-out for information as they need it as their family expands and grows up!
