In a stunning follow-up to his well-received *The Evolution of UN Peacekeeping*, William Durch looks at the peacekeeping efforts of the United Nations as they took shape during the present decade. El Salvador, Angola, Mozambique, Rwanda, Somalia, Cambodia and the former Yugoslavia all harboured explosive political situations that tested, and in some cases continue to test, the limits of the United Nations ability to keep peace in a world where the political situation is

constantly changing. Anyone interested in international politics and peacekeeping will want to read Durch's newest.

This Physics textbook presents the basic concepts of physics that students need to know for later courses and future careers. This text helps students learn that physics is a tool for understanding the real world, and to teach transferable problem-solving skills, that students can use throughout their entire lives. Some of the most important enhancements in this edition include: new/updated MCAT exam coverage added and moved online, review and synthesis problems added, new biomedical applications, lists of biomedical applications at the beginning of each chapter, new ranking tasks, checkpoints, and collaborative problems.

Connections have also been enhanced to help students see the bigger picture.

McGraw-Hill's Connect, is also available as an optional, add on item.

Connect is the only integrated learning system that empowers students by continuously adapting to deliver precisely what they need, when they need it, how they need it, so that class time is more effective.

Connect allows the professor to assign homework, quizzes, and tests easily and automatically grades and records the scores of the student's work.

Problems are randomized to prevent sharing of answers and may also have a "multi-step solution" which helps move the students' learning along if they

experience difficulty.
