Deep learning is often viewed as the exclusive domain of math PhDs and big tech companies. But as this hands-on guide demonstrates, programmers comfortable with Python can achieve impressive results in deep learning with little math background, small amounts of data, and minimal code. How? With fastai, the first library to provide a consistent interface to the most frequently used deep learning applications. Authors Jeremy Howard and Sylvain Gugger, the creators of fastai, show you how to train a model on a wide range of tasks using fastai and PyTorch. You'll also dive progressively further into deep learning theory to gain a complete understanding of the algorithms behind the scenes. Train models in computer vision, natural language processing, tabular data, and collaborative filtering. Learn the latest deep learning techniques that matter

most in practice. Improve accuracy, speed, and reliability by understanding how deep learning models work. Discover how to turn your models into web applications. Implement deep learning algorithms from scratch. Consider the ethical implications of your work. Gain insight from the foreword by PyTorch cofounder, Soumith Chintala.

Everything you need to protect your invention now. The provisional patent application (PPA) is a quick, inexpensive, and legal way to claim your invention—and buy yourself time to determine whether it's worthwhile to pursue a regular patent. Patent Pending in 24 Hours shows you how to: conduct a patent search online, evaluate potential hurdles to patentability, prepare informal drawings, file your application, and file a new PPA to reflect modifications. The 9th edition covers the latest implications of the "America Invents Act," as well as recent

revisions to patent rules and regulations. Thousands of people have used Patent Pending in 24 Hours successfully. You can too! Includes key PPA-related forms: nondisclosure agreement, patent assignment, prototype-maker agreement, and joint-ownership agreement.

Learn about the role that patent models played in American history--and even learn to build your own replica! Patent models, working models required for US patent filings from 1790 to 1880, offer insight into--and inspiration from--a period of intense technological advancement, the Industrial Revolution. The Rothschild Patent Model Collection consists of thousands of patent models, many from the 19th century. This book features the most outstanding of these patent models, and offers deep insight into the cultural, economic, and political history of the United States. This book not only catalogs hundreds of the most compelling models from the collection, but shows you how to build your own replicas of several selected models using Lego, 3D printing, and other materials and techniques.

The Model Rules of Professional Conduct provides an up-to-date resource for information on legal ethics. Federal, state and local courts in all jurisdictions look to the Rules for guidance in solving lawyer malpractice cases, disciplinary actions, disqualification issues, sanctions questions and much more. In this volume, black-letter Rules of Professional Conduct are followed by numbered Comments that explain each Rule's purpose and provide suggestions for its practical application. The Rules will help you identify proper conduct in a variety of given situations, review those instances where discretionary action is possible, and define the nature of the relationship between you and your clients, colleagues and the courts.

Understanding intellectual property, safeguarding your ideas
Intellectual property is constantly at risk, and the protection of chemical science and technology through the patenting process allows individuals and companies to protect their hard work. But in order to truly be able to protect your ideas, you need to understand the basics of patenting for yourself. A practical handbook designed to empower inventors like you to write your own patent application drafts in conjunction with an attorney, *Writing Chemistry Patents and Intellectual Property: A Practical Guide* presents a brand new methodology for success. Based on a short course author Francis J. Waller gives for the American Chemical Society, the book teaches you how to structure a literature search, to educate the patent examiner on your work, to prepare an application that can be easily duplicated, and to understand what goes on behind the scenes during the patent examiner's rejection process. Providing essential insights, invaluable strategies, and applicable, real-world examples designed to maximize the chances that a patent will be accepted by the United States Patent and Trademark Office, *Writing Chemistry Patents and Intellectual Property* is the book you need if you want to keep your work protected.

Invention Analysis and Claiming presents a comprehensive approach to analyzing inventions and capturing them in a sophisticated set of patent claims. A central theme is the importance of using the problem-solution paradigm to identify the "inventive concept" before the claim-drafting begins. The book's teachings are grounded in "old school" principles of patent practice that, before now, have been learned only on the job from supervisors and mentors.

If you want to learn how to identify and protect the critical inventions developed in your business, you're in the right place. If you are confused about the patent application process and don't understand which inventions are worthy of patent protection, this book sheds light on those issues. You invest significant time, money, and effort developing new products and services. That means lots of late nights and missed family activities to perfect

these inventions. You and your team are doing important work. Your inventions can make vehicles safer, get vaccines to patients faster, and provide improved teaching systems for kids. You want to protect those inventions just like you would any other valuable business asset. Patents provide a way to protect the inventions in your new products and services. Patents covering critical inventions in your industry provide a competitive edge during the life of the patent. In my experience, many companies do not understand the patent process and fail to properly protect inventions that are critical to the company's success. That's why I created the three-step system described in this book. The system has been tested with hundreds of companies of all sizes in a variety of industries. It's the same system I use every day with my own clients.
