What happened to ancient

Greek thought after

Antiquity? What impact

did Abrahamic religions

have on medieval
Byzantine and Islamic
scholars who adapted and
reinvigorated this ancient
philosophical heritage?

Reason and Revelation in
Byzantine Antioch tackles
these questions by
examining the work of the
eleventh-century Christian
theologian Abdallah ibn
al-Fadl, who undertook an
ambitious program of
translating Greek texts,

ancient and
contemporary, into
Arabic. Poised between
the Byzantine Empire that
controlled his home city of
Antioch and the Arabic-
speaking cultural universe
of Syria-Palestine, Egypt,
Aleppo, and Iraq, Ibn al-
Fadl engaged intensely
with both Greek and
Arabic philosophy,
science, and literary
culture. Challenging the

common narrative that treats Christian and Muslim scholars in almost total isolation from each other in the Middle Ages, Alexandre M. Roberts reveals a shared culture of robust intellectual curiosity in the service of tradition that has had a lasting role in Eurasian intellectual history.

Modern Economic

Regulation Currency

The overarching research topic addressed in this book is the complex and multifaceted interaction between infrastructural accessibility/connectivity

of city-regions on the one hand and knowledge generation in these city-regions on the other hand. To this end, the book brings together chapters analysing how infrastructural accessibility is related to changing patterns of business location of knowledge-intensive industries in city-regions. The chapters in this book specifically dwell on recent manifestations of and developments in the accessibility/knowledge-nexus, with a particular metageographical focus

on how this materializes in major city-regions. In the different chapters, this shifting relation is broached from different perspectives (seaports, airports, brainports), at different scales (ranging from global-scale analyses to case studies), and by adopting a variety of methodologies (straddling the wide variety of methodological approaches currently adopted in human geography research). Researchers contributing to this edited volume come from different

scholarly backgrounds (sociology, human geography, regional planning), which allows for a varied treatise of this research topic.

Unveiling the Natural Gas Opportunity in the Caribbean Lulu.com

Annotation The main objective of this report is to outline key policy issues that need to be addressed in order to achieve energy sector reform at the national and regional levels.

Japanese Economic Development Routledge
Larger and more

diversified developed economies have other sources of growth For example, international trade accounts for 65 percent of GDP in Canada but only 30 percent in the United States.¹ Beyond the imperative to continue trading, Canada has the right ingredients to become a global trading hub and a nexus for global supply chains. [...] This "new normal" will have a direct impact on future GDP growth.³ Despite the role of trade in spurring global growth and lifting entire

segments of the population out of poverty, the future of large multilateral trade agreements, such as the Trans-Pacific Partnership (TPP), is clearly at risk. [...] Both the government and the private sector should push for better integration of Canadian and American businesses and should promote the benefits of engaging with Canadian businesses through cross-border trade and investments. [...] Such an approach would recognize the fact that one of Canada's

greatest economic assets is our proximity to and long history of trade with the United States, which receives nearly three-quarters of Canada's exports and provides half of our imports. [...] About 95 percent of the North American trade of both Canada and Mexico, in goods and services alike, is with the United States. Energy and Environmental Strategies in the Era of Globalization Cambridge University Press
Economic regulation affects us all, shaping how we access essential

services such as water, energy and transport, as well as how we communicate with one another in the digital world. Modern Economic Regulation describes the core insights of economic theory on which regulatory policies are based and connects this with evidence of how regulation is applied. It focuses on fundamental questions such as: why are certain industries regulated? What principles can inform regulation? How is regulation implemented?

Which regulatory policies have been more, or less, effective in practice? All chapters in this second edition are fully updated to reflect the latest research and evidence, while five new chapters cover behavioural economics and the regulation of rail, aviation, payment systems and digital platforms. Each chapter contains discussion questions and topical case studies, and online materials include over 60 applied exercises that explore real-life regulatory problems from

around the world.
Let's Go Southeast Asia
9th Edition International
Business Publications USA
Ambassador (Dr.) Robin
Renee Sanders new book
on The Rise of Africas
Small & Medium Size
Enterprises (SMEs) is an
insightful examination of
the dramatic shift in the
development paradigm
for Sub Saharan Africa
driven in large part by the
imaginative, innovative,
and insta-impact
leadership of the regions
small businesses or SMEs.
SMEs have helped drive
economic development,

growth and aided in
increasing the size of the
Continents middle class,
Sanders says. With the
Introduction to the book
by renown civil rights
leader Ambassador
Andrew Young, and the
Foreword by Sub Saharan
Africas leading
businessman, Mr. Aliko
Dangote, Sanders book
credits the determination
of Africa SMEs and
entrepreneurs (which
includes African nationals,
immigrants and African
Americans) for stepping
into the void left by 40-
years of post-

independence
development approaches
that had little impact on
reducing overall poverty
and creating jobs in the
region. Africas dynamic
entrepreneurial spirit of
Generation-Xers and
Millennials are and have
formed SMEs and social
enterprises that today are
responsible for conceiving
and inventing many of the
new apps, and answers to
address the regions age-
old poverty issues,
Sanders emphasizes.
Africa SMEs are not only a
key driver for jobs, but
serve as an additional

catalyst to grow the middle class. Sanders argues that it was the Rise of the Africa SME converging with technology and its mobility that has changed, over the last decade, the focus and direction of development in Sub Saharan Africa. The book has a few vignettes from Sanders diplomatic life and work as CEO of the FEEEDS Advocacy Initiative with Africa SMEs over the years, as well as regional examples of some of innovative things Africa entrepreneurs are

doing in sectors ranging from agriculture and food security to energy and climate change. The book also walks readers through what donors, foundations and African stock markets are doing today to help in the SME space. Sanders ends with recommendations of what more can be done by donors, African governments, and the new U.S. administration to further assist Africa SMEs, particularly the group she calls the critical mass, and those at the fragile end of Africas middle class.

E-Business and Distributed Systems Handbook World Bank Publications

Over the last eight years the Syrian conflict has developed into one of the worst humanitarian tragedies of modern times. More than half a million victims, 5 million refugees abroad and 6 million internally displaced: the figures only capture part of Syria's catastrophe. In addition, there is the less quantifiable damage to the country's social fabric. Against this

dramatic backdrop, this ISPI Report aims to answer a few crucial questions: how can a country whose society has gone through such traumas and destruction reimagine itself and its future? What conditions would allow those Syrians who were forced to leave their homes to return? And what are the regional and international dynamics and interests that will shape Syria's future? The Report provides the reader with key tools to understand where Syria is headed and

what can be done to avoid the worst scenarios.

Conceptualizing the Regulatory Thicket

Inter-American Development Bank
This book focuses on the latest developments in the Asia-Pacific community in terms of how deregulation and privatization are bringing more risk to energy companies. In the light of these market changes, interest in energy risk management has grown substantially and is becoming a fiduciary responsibility of energy

companies. As energy trading, power exchanges and hedging techniques establish themselves in the oil, power and gas sectors, so then do newer derivatives markets emerge in LNG hedging, weather derivatives and freight hedging. Fusaro and James, as seasoned market practitioners in the region, focus on these market changes and examine the future of Asian energy hedging.

Reconceptualising Global Finance and its Regulation

Ledizioni
This book provides

readers with cutting-edge techniques that can be applied to energy and environmental economics. Further, it highlights the effects that both globalization and economic growth have on the environment. In addition to offering a broader perspective on the relationship between environmental pollution, energy consumption and economic growth, the book studies the relationship between economic growth and environmental damage by drawing on the theoretical

hypothesis of the Environmental Kuznets Curve. The book presents new econometric techniques and innovative approaches to the study of the energy economy. Accordingly, it can be used to help analyse the current state of the energy economy, the environment and globalization, and can serve as a theoretical reference manual for doctoral students and academics seeking new analytical techniques. **Banks, Exchanges, and Regulators** Springer

Drawing on cutting-edge research from leading scholars, this book investigates state preferences for regime creation and assesses state capacity for executing these preferences in Northeast Asia's energy domain, defined as the geographical area comprising the following countries: Russia, Mongolia, China, Japan, South Korea and North Korea. It examines questions pertaining to how states perceive the need and necessity for

establishing a regime when it comes to the issue of energy and how much commitment they make to the effort in Northeast Asia. The book analyses the factors that shape each country's fundamental energy interests in the region, how these interests impact their attitudes toward engaging the region on energy security and the way they carry out their regional engagement. Based on countries' interests in promoting institutionalized regional

energy cooperation and their capacity for forging that cooperation, the collection assesses each state's role in contributing to an energy regime in Northeast Asia. It then concludes with a critique on the decade-plus quest for energy security cooperation in Northeast Asia and suggests ways forward for facilitating regional energy security cooperation. This book will be of great interest to scholars and students of environmental policy, energy policy, security studies, Asian studies and

international relations. **Rebuilding Syria** John Wiley & Sons
Never have financial markets been subjected to a period of change as rapid and extensive as took place from the 1970s onwards. Ranald C. Michie provides an authoritative account of this upheaval based on a careful reading of the Financial Times over the last four decades. Handbook of Multi-Commodity Markets and Products Oxford University Press
In March 2018,

representatives of member countries of the African Union signed the African Continental Free Trade Area (AfCFTA) agreement. This agreement provides a framework for trade liberalization in goods and services and is expected to eventually cover all African countries. Using a multi-country, multi-sector general equilibrium model based on Costinot and Rodriguez-Clare (2014), we estimate the welfare effects of the AfCFTA for 45 countries in Africa. Three different

model specifications—comprising both perfect competition and monopolistic competition—are used. Simulations include full elimination of import tariffs and partial but substantial reduction in non-tariff barriers (NTBs). Results reveal significant potential welfare gains from trade liberalization in Africa. As intra-regional import tariffs in the continent are already low, the bulk of these gains come from lowering NTBs. Overall gains for the continent are broadly

similar under the three model specifications used, with considerable variation of potential welfare gains across countries in all model structures.

The Columbia Gazetteer of the World: A to G
Macmillan
Singapore had, by the 1980s, emerged as one of the world's great oil refining and trading centres, with the "East of Suez" region within its sphere of influence. The city-state's policy-making went against the grain in much of its practice of

economic development. It ensured that energy products were bought and sold in the domestic market at essentially global prices, in contrast to the common practice in developing countries of subsidizing energy fuels for social equity. Without a drop of oil of its own, Singapore also managed to attract large foreign investments in the capital-intensive oil refining and petrochemical manufacturing sectors in an export-oriented strategy. This was at a

time when governments of most newly independent countries were busy trying to promote heavy industry by protectionist trade policies and import-substituting industrialization. The purpose of this book is two-fold. It is intended to introduce a host of energy-related discussions relevant to a wider group of readers who do not “do energy” for a living, yet are keenly interested in understanding the many complexities of modern

industrial societies which need to balance economic, environmental, and security priorities of ordinary citizens. It is also meant to serve as an introductory assessment of key energy-related issues, with a particular relevance for small advanced countries such as Singapore. Xlibris Corporation
This book examines the regulatory framework, regulatory objectives, regulatory logics, regulatory instruments, regulatory failures, and regulatory responses in

China's financial market after the global financial crisis. The book provides an in-depth analysis of China's contemporary financial regulatory system, focusing on risks, regulation, and policies in practice. By drawing on public and private interest theories relating to financial regulation, the book contends that the controlled development of the banking sector, and the financial sector generally, has transformed China's banks into more market-oriented institutions and

increased public sector growth. However, China's financial market and financial regulation have some inherent weaknesses and deficiencies. This book also offers insights into how this can be improved or adapted to minimize systemic risks in China's financial sector. This book tries to prove that financial regulation is not just a vehicle for maintaining efficient financial markets but a primary tool through which the Chinese government achieves its

political and economic objectives. More fundamentally, according to the law and finance theory, strong market and vibrant judicial systems are needed to further modernize China's financial markets and market economy. The book will be a useful reference for anyone interested in learning from the Chinese experience.

Positioning Canada as a Global Trading Hub Oxford University Press on Demand

A news-breaking account of the global stock market's subterranean battles, *Dark Pools* portrays the rise of the "bots"--artificially intelligent systems that execute trades in

milliseconds and use the cover of darkness to outmaneuver the humans who've created them. In the beginning was Josh Levine, an idealistic programming genius who dreamed of wresting control of the market from the big exchanges that, again and again, gave the giant institutions an advantage over the little guy. Levine created a computerized trading hub named Island where small traders swapped stocks, and over time his invention morphed into a global electronic stock

market that sent trillions in capital through a vast jungle of fiber-optic cables. By then, the market that Levine had sought to fix had turned upside down, birthing secretive exchanges called dark pools and a new species of trading machines that could think, and that seemed, ominously, to be slipping the control of their human masters. *Dark Pools* is the fascinating story of how global markets have been hijacked by trading robots--many so self-directed that humans

can't predict what they'll do next.
