 Janet Lansbury's advice on respectful parenting is quoted and shared by millions of readers worldwide. Inspired by the pioneering parenting philosophy of her friend and mentor, Magda Gerber, Janet's influential voice encourages parents and child care professionals to perceive babies as unique, capable human beings with natural abilities to learn without being taught; to develop motor and cognitive skills; communicate; face age appropriate struggles; initiate and direct independent play for extended periods; and much more. Once we are able to view our children in this light, even the most common daily parenting experiences become stimulating opportunities to learn, discover, and to connect with our child. "Elevating Child Care" is a collection of 30 popular and widely read articles from Janet's website that focus on some of the most common infant/toddler issues: eating, sleeping, diaper changes, communication, separation, focus and attention span, creativity, boundaries, and more. Eschewing the quick-fix 'tips and tricks' of popular parenting culture, Janet's insightful philosophy lays the foundation for a closer, more fulfilling parent/child relationship, and children who grow up to be authentic, confident, successful adults.

Innovative ways parents can nurture their child's development even before birth Most expectant parents can't wait to get to know the mysterious little person who will be arriving. Now parents can find out what's really going on in there and start nurturing their baby's development during pregnancy with the help of From First Kicks to First Steps. Beautifully written by a pioneering pediatrician, this groundbreaking book focuses on the transition between pregnancy and the first year to help parents give their baby the very best start in life. Dr. Alan Greene answers such common parental concerns as: Do babies dream before birth? What can parents do during pregnancy to help their babies later in life? Can babies become better sleepers even before they're born? Does taking fluoride help or hurt? And much more!

Lower urinary tract dysfunction (LUTD) is an umbrella diagnosis that covers the abnormalities of anatomy and function in the bladder, urethra, and, in men, the prostate. People with LUTD face a number of social, mental, and physical health effects due to the symptoms. Despite the increasing evidence in the assessment and management of lower urinary tract symptoms, it remains a challenge to bridge the gap between research evidence and clinical practice. In this book, each and every one of the authors presents a remarkable work for how to apply the evidence to clinical practice from different aspects. I hope this book is a key for every reader to open the door to LUTD.

"Abbie Hoffman, Yippie non-leader, notorious dope addict and up-and-coming rock group (the WHAT), is currently on trial with seven others for conspiracy to incite riot during the Democratic Convention. When he returned from the Woodstock Festival he had five days before leaving for Chicago to prepare for the trial. Woodstock Nation, which the author wrote in longhand while lying upside down, stoned, on the floor of an unused office of the publisher, is the product of those five days. Other works by Mr. Hoffman include Revolution for the Hell of It and Fuck the System, which he describes as a "tender love epic"."-- Back cover.

The landmark text about the inner workings of the unconscious mind—from the symbolism that unlocks the meaning of our dreams to their effect on our waking lives and artistic impulses—featuring more than a hundred images that break down Carl Jung’s revolutionary ideas “What emerges with great clarity from the book is that Jung has done immense service both to psychology as a science and to our general understanding of man in society.”—The Guardian “Our psyche is part of nature, and its enigma is limitless.” Since our inception, humanity has looked to dreams for guidance. But what are they? How can we understand them? And how can we use them to shape our lives? There is perhaps no one more equipped to answer these questions than the legendary psychologist Carl G. Jung. It is in his life’s work that the unconscious mind comes to be understood as an expansive, rich world just as vital and true a part of the mind as the conscious, and it is in our dreams—those personal, integral expressions of our deepest selves—that it communicates itself to us. A seminal text written explicitly for the general reader, *Man and His Symbols* is a guide to understanding the symbols in our dreams and using that knowledge to build fuller, more receptive lives. Full of fascinating case studies and examples pulled from philosophy, history, myth, fairy tales, and more, this groundbreaking work—profusely illustrated with hundreds of visual examples—offers invaluable insight into the symbols we dream that demand understanding, why we seek meaning at all, and how these very symbols affect our lives. By illuminating the means to examine our prejudices, interpret psychological meanings, break free of our influences, and recenter our individuality, *Man and His Symbols* proves to be—decades after its conception—a revelatory, absorbing, and relevant experience.

"A masterpiece of contemporary Bible translation and commentary."—Los Angeles Times Book Review, Best Books of 1999 Acclaimed for its masterful new translation and insightful commentary, *The David Story* is a fresh, vivid rendition of one of the great works in Western literature. Robert Alter's brilliant translation gives us David, the beautiful, musical hero who slays Goliath and, through his struggles with Saul, advances to the kingship of Israel. But this David is also fully human: an ambitious, calculating man who navigates his life's course with a flawed moral vision. The consequences for him, his family, and his nation are tragic and bloody. Historical personage and full-blooded imagining, David is the creation of a literary artist comparable to the Shakespeare of the history plays.

Cesar Millan—nationally recognized dog expert—helps you see the world through the eyes of your dog so you can finally eliminate problem behaviors. From his appearances on *The Oprah Winfrey Show* to his roster of celebrity clients to his reality television series, Cesar Millan is America’s most sought-after dog-behavior expert. But Cesar is not a trainer in the traditional sense—his expertise lies in his unique ability to comprehend dog psychology. Tracing his own amazing journey from a clay-walled farm in Mexico to the celebrity palaces of Los Angeles, Cesar recounts how he learned what makes dogs tick. In *Cesar’s Way*, he shares this wisdom, laying the groundwork for you to have stronger, more satisfying relationships with your canine companions. Cesar’s formula for a contented and balanced dog seems impossibly simple: exercise, discipline, and affection, in that order. Taking readers through the basics of dog psychology and behavior, Cesar shares the inside details of some of his most fascinating cases, using them to illustrate how common behavior issues develop and, more important, how they can be corrected. You'll learn:

- What your dog really needs may not be what you’re giving him
- Why a dog’s natural pack instincts are the key to your happy relationship
- How to relate to your dog on a canine level
- There are no “problem breeds,” just problem owners
- How to choose a dog who’s right for you and your family
- The difference between discipline and punishment
- And much more!

Filled with fascinating anecdotes about Cesar’s longtime clients, and including forewords by the president of the International Association of Canine Professionals and Jada Pinkett Smith, this is the only book you’ll need to forge a stronger, more rewarding connection with your four-legged companion.

Clinical Case Studies for the Family Nurse Practitioner is a key resource for advanced practice nurses and graduate students seeking to test their skills in assessing, diagnosing, and managing cases in family and primary care. Composed of more than 70 cases ranging from common to unique, the book compiles years of experience from experts in the field. It is organized chronologically, presenting cases from neonatal to geriatric care in a standard approach built on the SOAP format. This includes differential diagnosis and a series of critical thinking questions ideal for self-assessment or classroom use.

Elimination Disorders in Children and Adolescents John Wiley & Sons

In this current and scholarly text, authors Eric Mash and David Wolfe achieve a balance between developmental, clinical-diagnostic, and experimental approaches to child and adolescent psychopathology. The book traces the developmental course of each disorder and shows how biological, psychological, and sociocultural factors interact with the child’s environment. First-person accounts and cases enrich the reader’s understanding of what children and adolescents with disorders experience, emphasizing the strengths of individual children. Case materials are integrated throughout each chapter to help students understand the chapter’s key topics. Engaging “first-person” accounts frequently introduce the chapters and reflect the authors’ clinical experience. In every disorder chapter, the authors present an overview of the most empirically supported approaches to intervention. The authors discuss the unique as well as general aspects of major intervention strategies for each disorder. The authors pay attention to risk and protective factors and the conditions that lead to effective coping in some children, despite adverse early circumstances. The authors have organized the book into logical five-part structure: Understanding Abnormal Child Psychology, Behavioral Disorders (ADHD and disruptive behavior disorders), Emotional Disorders (anxiety and mood disorders), Developmental and Learning Disorders (mental retardation, autism, childhood-onset schizophrenia, and communication and learning disorders), and Problems Related to Physical and Mental Health (health-related disorders, eating

disorders, and child abuse and neglect). This organization provides students with a framework for understanding the disorders that will enhance their mastery of the material.

Bladder Control and Enuresis JML Press

A comprehensive review of enuresis, such as this, has long been overdue. In this book attention is given to bladder control, reflecting current interest in developmental aspects of paediatrics, and to enuresis, reflecting the need to relieve a common cause of unhappiness. The topics discussed include how most children become dry by age four or five, and why a minority do not; why these children go on wetting their beds, and why some start doing so after a period of dryness. The prevalence of bedwetting in younger children varies curiously in different countries. Treatment, by explanation, by drugs and by the buzzer, is well covered in practical detail. Previously published articles are reviewed. In too many it has been difficult to determine whether authors are consistently writing about day-time or night-time, life-long or acquired, wetting. Emphasis is given to papers in which soundly based research is clearly reported. Though this book was inspired by and derives from a recent International Colloquium at Newcastle, it is anything but a report of that Colloquium. To extend coverage and avoid repetition, a number of chapters have been specially written, and papers have been re-written, fused or omitted; several up-to-date, comprehensive and authoritative reviews have been included. Whether readers are community, hospital or family doctors, or psychologists, they can enjoy criticising and evaluating the at times differing views put forward, and can synthesise their own new and better conclusions. The editors have aimed to clear the way for further research by identifying clearly what is known and posing questions. Equally, however, it is hoped that this volume will promote a deeper and better understanding of bladder control and enuresis, and enable doctors who use it for reference to give more effective help to children with wetting problems.

Bananas and plantains are major fruit crops in the tropics and subtropics, making a vital contribution to the economies of many countries. In the last 15 years, substantial changes have occurred in banana production, among them the increased importance of fungal and viral diseases and their serious impact on Cavendish export cultivars, smallholder plantains and cooking bananas. Changes in production systems such as protected greenhouse cultivation, organic, fair-trade and integrated cultivation and their respective certification schemes have also become prominent. This book provides an accessible review of the scientific principles of banana production and how these relate to field practices. This new edition has expanded coverage of world trade statistics and policies, breeding of new cultivars in relation to disease resistance and markets, prospects for genetically-modified bananas and the increasing role of endophytes in controlling pests and diseases.

A groundbreaking guide to raising responsible, capable, happy kids Based on the latest research on brain development and extensive clinical experience with parents, Dr. Laura Markham’s approach is as simple as it is effective. Her message: Fostering emotional connection with your child creates real and lasting change. When you have that vital connection, you don’t need to threaten, nag, plead, bribe—or even punish. This remarkable guide will help parents better understand their own emotions—and get them in check—so they can parent with healthy limits, empathy, and clear communication to raise a self-disciplined child. Step-by-step examples give solutions and kid-tested phrasing for parents of toddlers right through the elementary years. If you’re tired of power struggles, tantrums, and searching for the right “consequence,” look no further. You’re about to discover the practical tools you need to transform your parenting in a positive, proven way.

This timely volume provides the practitioner with evidence based treatments for many of the clinical problems encountered in integrated care. It applies the core concepts of stepped care to integrating brief mental health interventions as a way to address ongoing problems in the modern healthcare landscape. It sets out in depth the state of the healthcare crisis in terms of costs, staffing and training issues, integration logistics and management, system culture, and a variety of clinical considerations. Central to the book is a best-practice template for providing behavioral stepped care in medical settings, including screening and assessment, levels of intervention and treatment, referrals, and collaboration with primary care and other specialties. Using this format, contributors detail specific challenges of and science-based interventions for a diverse range of common conditions and issues, including: Depression. Anxiety disorders. Adherence to chronic obstructive pulmonary disorder management. Alcohol and other substance misuse. Attention deficit hyperactivity disorder. Chronic pain. Neurocognitive disorders. Paraphilias: problematic sexual interests.[WU3] Sexual abuse and PTSD in children. A solid roadmap for widescale reform, *Principle-Based Stepped Care and Brief Psychotherapy for Integrated Care Settings* is deeply informative reading for health psychologists, social workers, psychiatrists, and clinical psychologists. It also clarifies the research agenda for those seeking improvements in healthcare quality and delivery and patient satisfaction.

Why does your toddler get upset when his or her routine is disrupted? Why do they follow you from room to room and refuse to play on their own?

Why are daily routines such as mealtimes, bath time, and bed time such a struggle? This accessible guide demystifies the difficult behaviors of anxious toddlers, offering tried-and-tested practical solutions to common parenting dilemmas. Each chapter begins with a real life example, clearly illustrating the behavior from the parent's and the toddler's perspective. Once the toddler's anxious behavior has been demystified and explained, new and effective parenting approaches are introduced to help parents tackle everyday difficulties and build up their child's resilience, independence, and coping mechanisms. Common difficulties with bath time, toileting, sleep, eating, transitions, social anxiety, separation anxiety, and sensory issues are solved, along with specific fears and phobias, and more extreme behaviors such as skin picking and hair pulling. A must-read for all parents of anxious toddlers, as well as for the professionals involved in supporting them.
