Praise for

Accountaneur(r)

"Accountants need to be more than just accountants and Hitendra creates a way for accountants to look at themselves. He calls it the Accountaneur(r). This book contains a

great deal of new thought about what accountants should be doing. It is a required read for all professionals, partners, and non-partners.

Leaders at accounting firms have a huge responsibility to create

environment conducive to growth and achievement, not just at their firms, but especially for their clients. Hitendra brings a perspective that helps accounting firm leaders find answers to key questions that will lead to entrepreneurial achievement."- August J. Aquila, CEO, AQUILA Global Advisors LLC, consultant to professional service firms, author, and speaker. "What impressed me the first time I met Hitendra is his drive to help others reach their potential. This book does just that. You will learn and appreciate what an important role the accountant plays in our business and personal lives. Hitendra makes the profession come alive. If you are in the

accounting profession, or thinking about it, you must read this book!"- Chester Elton, New York Times best-selling author of "The Carrot Principle," "All In," and "What Motivates Me" "Entrepreneurs create wealth and opportunities for others. Entrepreneurial accountants make it possible for entrepreneurs. Accountaneur(r) is a probing question bank for accountants who want to be entrepreneurial."- Allan D. Koltin, CPA, CEO, Koltin Consulting Group Inc. Are you an Accountaneur(r)? Think different. Taking a cue from several research studies across different professions and industries that identify traits, strengths, talents, skills, values,

and beliefs, we identify the most common attitudes and beliefs of successful accountants who can be deservedly called as entrepreneurs in the true sense of the word. An Accountaneur is an entrepreneur whom, with considerable initiative and risk, organizes and manages a business that provides tax, accounting, and advisory services to solve problems for people, for profit, or, for pay, by employing productive labor and technologies. So, the difference between an Accountaneur(r) and an accountant lies in his or her traits, strengths, talents, skills, values and beliefs. There are three types of people in the professional world. Those who work for others, i.e. in a job.

Those who work for themselves, i.e. who create a job for themselves. And those who create jobs for others. An

Accountaneur(r) either works for him or herself or is the one who creates jobs for others in the tax and accounting profession.

Are you an Accountaneur(r)? If you work for yourself or if you have created jobs for others in the tax and accounting profession, you are an entrepreneur, rather an Accountaneur. You are an Accountaneur if you chose not take up a job, but chose instead to create a business. More at <http://cpatrendlines.com/author/patil>

Running a small, medium or large size business today has never been more demanding. The complexities involved in record keeping, accounting, tax, and other management tasks take up significant resources and time. And with profits always in mind, finding ways to stay competitive and building a robust set of systems, it can seem all too hard to invest the time required to optimise those accounting and management software solutions. In our experience most business owners or managers are simply not aware that there are better solutions in the marketplace. The hidden losses in any business occur when staff are performing

tasks that are labor intensive involving hours of manual work in order to produce a result. Often these procedures can be streamlined or enhanced with the right solution and could repay the investment with just one area improved in your business! When you buy the book don't forget to register your book for the free bonuses. Details inside the book.

**Quickbooks** IGI Global Overviews enterprise system (ES) opportunities and challenges and suggests the ESs are not the right choice for every company. Provides a set of guidelines to help managers evaluate the benefits and risks of ES implementation, stressing that an

organization must make simultaneous changes in its information systems, business processes, and business strategy. Such changes are described in detail with extensive examples from real organizations, demonstrating that ESs should be viewed as business rather than technology projects. **QuickBooks Enterprise-How to Use Updates** The Rosen Publishing Group, Inc Enterprise Resource Planning (ERP) refers to large commercial software packages that promise a seamless integration of information flow through an organization by combining various sources of information into a single software application and a single database. The

outcome of ERP itself is still a mystery, but the trends and issues it has created will be the enigma that future generations will have to solve. Traditionally, separate units were created within an organization to carry out various tasks, and these functional areas would create their own information systems thereby giving rise to systems that were not integrated. ERP strives to provide a solution to these problems.

Enterprise Resource Planning Solutions and Management examines the issues that need to be further studied and better understood to ensure successful implementation and deployment of ERP systems.

This book comprises a set of papers selected from those presented at the fifth « International Conference on Enterprise Information Systems », (ICEIS'2003) held in Angers, France, from 23 to 26 April 2003. The conference was

organised by École Supérieure d'Électronique de l'Ouest (ESEO) of Angers, France and the Escola Superior de Tecnologia of Setúbal, Portugal. Since its first edition in 1999, ICEIS focuses on real world applications and aims at bringing together researchers, engineers and practitioners interested in the advances and business applications of information systems. As in previous years, ICEIS'2003 held four simultaneous tracks covering different aspects of enterprise computing: Databases and Information Systems Integration, Artificial Intelligence and Decision Support Systems, Information Systems Analysis and Specification and Software Agents and

Internet Computing. Although ICEIS'2003 received 546 paper submissions from over 50 countries, only 80 were accepted as full papers and presented in 30-minutes oral presentations. With an acceptance rate of 15%, these numbers demonstrate the intention of preserving a high quality forum for future editions of this conference. From the articles accepted as long papers for the conference, only 32 were selected for inclusion in this book. Additional keynote lectures, tutorials and industrial sessions were also held during ICEIS'2003, and, for the first time this year, the 1st Doctoral Consortium on Enterprise Information Systems gave PhD students an

opportunity to present their work to an international audience of experts in the field of information systems.
