Microbial Biodeterioration CRC Press

Advances in the pharmaceutical and cosmetic sciences have propelled the development of transdermal and topical therapeutic systems into a technologically revolutionary phase. This book offers an authoritative guide to the development of delivery systems. Discussions by research and industry experts include methods for clinical assessment, percutaneous permeation enhancers, and formulation approaches to topical drug delivery. It also addresses IND, ANDA, NDA, and PLA filings for transdermal products with the FDA. The book contains practical information, step-by-step guidance, numerous references, and a complete index to help readers quickly locate the information they need. Features

“A beautiful novel” of life and death, past and present, and the thin lines that lie between them (The Toronto Star). On a streetcar, on Christmas Day, 1950, clutching the chrome rail in front of him, Martin Radey looks at the woman seated beside him, a stranger, and utters his last words: “I can’t breathe.” Like millions, billions before him, it is his turn to die. But death is not what he expected. The journey has only begun. From 1880 to 1950, time happens to the world around him, not to memory, because memory, he discovers, is beyond time, traveling forward with him, shaping the earth, the sky, the heart. The prequel to the widely celebrated *Shadow of Ashland*, *A Witness to Life* “is an emotionally charged experience that will not soon be forgotten.” (Dallas Morning News)

Pharmaceutical water systems are an important part of good manufacturing practice. With development in design, installation and validation, pharmaceutical water systems are becoming key to new projects in the contemporary pharmaceutical industry. Pharmaceutical companies realize that pharmaceutical water systems can provide competitive advantage, consistent quality assurance, and cost saving. *Pharmaceutical Water Systems* offers comprehensive and in-depth coverage of the topic, presenting successful system operation examples selected from thousands of real-life systems. The title offers those working in pharma a deeper and more visual understanding of pharmaceutical water systems, promoting the popularization of design, manufacturing and validation through pharmaceutical water systems. The book introduces new and innovative technological concepts, including WFI generation with the purification method, online microorganism detecting technology, design and practice of WFI systems at normal temperature, residual chlorine removal technology with UV radiation, and rouge remediation and prevention, among others. The book consists

in 13 chapters, covering pharmacopeia and regulations; design concepts; unit operation and components; generation of purified water; generation of water for injection; storage and distribution systems; pharmaceutical steam systems; sanitation and sterilization technology; rouge formation; derouging stainless steel systems; quality management; automatic control technology; and validation Presents successful system examples selected from real-life systems Introduces novel technological innovations Details how pharmaceutical companies can gain competitive advantage through pharmaceutical water systems Offers access to many combined years of practical experience and real-world examples applied to pharmaceutical water systems Promotes the popularization of design, manufacturing and validation through pharmaceutical water systems

Engine Combustion: Pressure Measurement and Analysis, 2E provides practical information on measuring, analyzing, and qualifying combustion data, as well as details on hardware and software requirements and system components. Describing the principles of a successful combustion measurement process, the book will enable technicians and engineers to efficiently generate the required data to complete their development tasks. The revised edition has been updated with color photos and a fresh modern format has been adapted enhancing the readability of the book. As with the original printing, *Engine Combustion: Pressure Measurement and Analysis, 2E* is a comprehensive handbook for technicians and engineers involved in engine testing and development, and a valuable reference for scientists and students who wish to understand combustion measurement processes and techniques.

This title includes a number of Open Access chapters. The world needs renewable and clean forms of energy. Biofuels offer an alternative to fossil fuels, but first-generation biofuels had many challenges to be overcome. One strategy that second-generation biofuels are employing is microbial technology. This compendium volume gathers together recent investigations within this vital field of research. It offers: An overview of the topic

Investigations into the varieties of microorganisms useful for this technology Pretreatment methodologies Genetic engineering research that will further this technology Internationally recognized experts contribute chapters on their individual areas of research within this vital field of study. The book offers an authoritative platform from which graduate students and scientists can build future investigations that will create still more advanced biofuels.

Learning to argue and persuade in a highly competitive environment is only one aspect of life on a high-school debate team. Teenage debaters also participate in a distinct cultural world--complete with its own jargon and status system--in which they must negotiate complicated relationships with teammates, competitors, coaches, and parents as well as classmates outside the debating circuit. In *Gifted Tongues*, Gary Alan Fine offers a rich description of this world as a testing ground for both intellectual and emotional development, while seeking to understand adolescents as social actors. Considering the benefits and drawbacks of the debating experience, he also recommends ways of reshaping programs so that more high schools can use them to boost academic performance and foster specific skills in citizenship. Fine analyzes the training of debaters in rapid-fire speech, rules of logical argumentation, and the strategic use of evidence, and how this training instills the core values of such American institutions as law and politics. Debates, however, sometimes veer quickly from fine displays of logic to acts of immaturity--a reflection of the tensions experienced by young people learning to think as adults. Fine contributes to our understanding of teenage years by encouraging us not to view them as a distinct stage of development but rather a time in which young people draw from a toolkit of both childlike and adult behaviors. A well-designed debate program, he concludes, nurtures the intellect while providing a setting in which teens learn to make better behavioral choices, ones that will shape relationships in their personal, professional, and civic lives.

CEO Guide to Doing Business in Japan CRC Press

Despite the prevalence of marls in Indiana and the concerns associated with their behavior, very limited work has been done to study the engineering properties of these soils. This was the motivation for this research project, which involved two primary activities: (a) the creation of a map and database of existing information on marl deposits in Indiana; and (b) an in-depth characterization of the properties of a marl deposit in Daviess County, which was considered representative of similar deposits encountered in Indiana. The marl database was generated using ArcGIS 10.0 from information available at INDOT, and involved mining data from over 5,000 boreholes. The second part of the project involved field tests (seismic cone penetration tests, standard penetration tests, field vane shear tests), and laboratory experiments (index tests, incremental and constant rate of strain consolidation tests, and K0-consolidated undrained triaxial tests) conducted on high-quality Shelby tubes samples. Laboratory tests reveal that the deposit was not homogeneous as was initially anticipated, but was, instead, formed by two types of soils that repeat in horizontal thin layers. These two soils, referred to as "soil M" and "soil C," are both characterized by very high calcium carbonate contents but show distinct index and engineering properties that may be ascribed to differences in mineralogy and composition. This stratification is not detected by the field tests. The consolidation tests show that the deposit has an OCR less than 2 and compressibility parameters markedly dependent on stress level, as typical of sensitive soils. K0-consolidated undrained compression triaxial tests show that both soils exhibit normalized behavior, and that the relationship between strength and stress history is well described by the SHANSEP equation (although the SHANSEP parameters differ for the two soils). Comparison of the field data and laboratory results provides the means to validate published correlations for interpretation of the geotechnical properties of marls from field results. For the site examined, correlations to estimate shear wave velocity, stress history, and undrained strength from CPT results are identified. Implementation recommendations are provided for soil identification, sampling and specimen preparation, interpretation of field data, and preliminary design.

The Globus Toolkit is a key technology in Grid Computing, the exciting new computing paradigm that allows users to share processing power, data, storage, and other computing resources across institutional and geographic boundaries. *Globus Toolkit 4: Programming Java Services* provides an introduction to the latest version of this widely acclaimed toolkit. Based on the popular web-based *The Globus Toolkit 4 Programmer's Tutorial*, this book far surpasses that document, providing greater detail, quick reference appendices, and many additional examples. If you're making the leap into Grid Computing using the Globus Toolkit, you'll want *Globus Toolkit 4: Programming Java Services* at your side as you take your first steps. Written for newcomers to Globus Toolkit, but filled with useful information for experienced users. Clearly situates Globus application development within the context of Web Services and evolving Grid standards. Provides detailed coverage of Web Services programming with the Globus Toolkit's Java WS Core component. Covers basic aspects of developing secure services using the Grid Security Infrastructure (GSI). Uses simple, didactic examples throughout the book, but also includes a more elaborate example, the FileBuy application, that showcases common design patterns found in Globus applications. Concludes with useful reference appendices.

The work describes a new method of sphincter salvage in surgery of rectal cancer. Low tumors of the rectum are traditionally treated with amputation of the rectum. However, this operation is not well-received by patients, since it results in a permanent colostomy. By contrast, intersphincteric resection allows sphincter salvage even in low tumors and is now widely accepted among experts in the field of colorectal surgery. The book will describe the basics (pathology, physiology, radiology) as well as the surgical technique and its different modifications.

The theory and service of modern automotive engines is at the heart of this new edition of TODAY'S TECHNICIAN: AUTOMOTIVE ENGINE REPAIR & REBUILDING, International Edition. Thoroughly enhanced and updated, this book includes information on variable valve timing systems, hybrid and other advanced technology vehicles. Readers will learn how components are designed and how they function to support engine operation through the help of realistic line drawings and well-structured photographs that engage them in the parts and pieces of today's automotive engines. The newly revised fourth edition includes more engine performance diagnostic information, as well as current NATEF content to help readers adequately prepare for the ASE certification exam in Engine Repair.

This is an implementation project for the research completed as part of the following projects: SPR-3005 - Classification of Organic Soils and SPR-3227 - Classification of Marl Soils. The methods developed for the classification of both soils have been incorporated in INDOT standard specification 903.05 and 903.06 respectively. Both projects included recommendations for implementation that reflected input from the project PA and SAC. A specific recommendation from both projects was that INDOT soil technicians be trained to perform the required tests and classify soils based on the revised classification systems. This project was initiated to carry out the implementation of those recommendations. The project scope includes development of training material for instruction about the performance of the revised classification tests and methods, training to pertinent INDOT personnel, integration of the revised classification system into INDOT's standards, and establishment of a resource database for future training of INDOT personnel. Within the general scope outlined above, the specific objectives of the proposed work were to: a) administer training to select INDOT personnel and interested representatives from the geotechnical consulting/construction community; b) develop training materials to be used by INDOT to train additional personnel. These two general objectives were accomplished through four specific tasks: 1) Collection of Sample Soils for Testing and Classification; 2) Development of Training Material (a PowerPoint presentation with concise instructional handouts; supporting classification examples from a variety of soils; and a short manual summarizing the classification system for both soils with supporting examples); 3) Delivery of Training Sessions for INDOT personnel, as well as representatives from select geotechnical consultants and contractors; 4) Production of Training Video.

The presence of organics in soils is generally associated with high compressibility, significant secondary compression, often unsatisfactory strength characteristics, and low unit weight. As a result of the above, many state DOTs (Departments of Transportation) in the United States have strict limits on the maximum value of the organic content (2-7%) that can be present in soils to be used as sub grades and backfills. The loss on ignition test is the most widely used technique for measuring organic content. However, especially for low organic content soils, this method can significantly overestimate the true organic content. As a result, certain soils may be incorrectly classified and erroneously considered unviable for certain applications; in other cases unnecessary costly treatments may be requested, even if not required. These are the issues motivating the research presented in this report, which addressed the classification of organic soils and the quantification of organic matter in soils. The research reviewed existing classification systems for organic soils, the effects of organic matter on the geotechnical properties of soils, and the methods for determination of organic content. In addition to the review of the existing literature, this research also included experimental work conducted on natural soils with varying organic content, as well as on laboratory prepared ("artificial") organic soils.

Natalya has learned that life can throw many curve balls. Since her mother never cared for her, she was forced to turn her hustle mode on, learning to become a woman at an early age. Working for Milwaukee's Kingpin Pooh wasn't a dream for Natalya, but it paid well; however, after a fateful encounter with the law - coupled with the betrayal of those closest to her - she's forced to face the reality that she could spend years behind bars... After doing a one-year bid, Natalya has a new lease on life, determined to pursue her calling as a fashion designer. While getting her life together, she runs into her childhood crush, J'ron, who just happens to be the brother of her nemesis, Nissa. As Natalya's bond with J'ron deepens - will it be strong enough to endure the deadly of vengeance...?
