 Paul Grimwood has responded and worked from over a hundred fire stations in the USA and Europe. In this, his third book, he demonstrates how the very best strategies and tactical approaches from Europe and the USA may be effectively combined to enhance firefighter tactics and safety at structure fires. The book also covers and exceeds the 2007 syllabus of the European (UK) EDEXCEL CFBT Instructor Qualification (90 hours) for practical Fire Behavior Training (flashover training in ISO shipping containers and other FDS units). Euro Firefighter is for the CFBT instructor, firefighter, company officer and fire chief. The concept of teaching about flashover

using ISO steel shipping containers was developed in Europe - now read how European instructors teach fire behavior using a vast array of Fire Development Simulators (FDS). This book will also take you out onto the fire-grounds of London, New York, Madrid, Chicago, Paris, Germany and Sweden, demonstrating how similar fires are fought using different strategic approaches and showing how US and EURO firefighting tactics are gradually aligning in many areas. From tactical ventilation to air management, from Rapid Intervention Teams to high-rise firefighting and limited staffing, the author brings you the best tactics from Europe and the USA in one training manual! Written in such a way that the training officer can immediately transfer key learning points directly into training presentations, the core principles of this training package enhance firefighter safety on the fire-

ground. The book also provides a LINK CODE for ongoing updates and web-based downloads. Euro Firefighter covers a broad range of issues important to anyone who steps off a fire truck at the scene of an emergency.

This important new book is designed to serve many purposes in the fire service, ranging from being a starting point and refresher guide for firefighters seeking promotions at any level, to being a field operational guide for on-scene Incident Commanders and Company Officers. It offers an easy-to-follow, step-by-step action plan for firefighters working in Acting Capacities, and can be used when developing SOPs, and when organizing and planning training evolutions. It's definitely a book every firefighter, officer, and aspiring officer will want to own!

Fireground Strategies Grand Central Publishing

Fire Service Ethics is the first textbook specifically developed to help fire service personnel deal with ethical dilemmas. Firefighters and fire service leaders will find benefit from this important tool to aid them in dealing with complex issues. No other profession places such discretionary burden on its practitioners as the fire service. The military, law enforcement, the medical profession, and legal profession all provide a robust set of ethical policies and guidelines to their members. Fire Service Ethics provides the foundation for creating ethical boundaries. Fire Service Ethics meets and exceeds the course outcomes and course objectives for the National Fire Academy FESHE Model Curriculum Bachelor's (Non-Core) course called Fire Service Ethics (C0303). It is also well suited for fire officer and administration development programs. Section 1 of the book is entitled Foundations. Its four chapters are intended to provide the reader with the basic understanding of ethics necessary to master the material in the succeeding

three sections. Chapter 1 is recommended for all readers, as it addresses the important questions of ethical relevance to the fire service. Chapters 2, 3 & 4 are grounded in academic approaches to ethics and are specifically intended to be used in college courses. The material within the sections encourages critical analysis of ethical systems, and understanding of the basics of human behavior. Section 2 of the book is entitled Ethics on The Line. Its chapters address issues directly related to rank-and-file firefighters, and company officers. The section also deals with diversity; first as an abstract concept, and then as it applies specifically to the fire service. Section 2 is intended to serve dual purposes. First, it is designed to be included in an academic curriculum aimed at future firefighters. Secondly, Section 2 - combined with Section 4 - encompasses the majority of material appropriate for inclusion in fire service training programs. Section 3 of the text is dedicated to Administrative Ethics. The chapters within the section explore ethics issues faced by fire chiefs and senior administrative personnel. Included within the section are chapters on the building and maintenance of an ethical work culture, the ethical responsibilities associated with administration, and finally, ethics laws. Section 3 - combined with Sections 1 and 4 - is especially appropriate for officer development programs and collegiate programs in fire administration. Section 4 of the book is entitled Applied Ethics. The three chapters within the section deal with the application of ethics on the personal and department level. Included within the section are chapters on ethical decision-making, mechanisms by which unethical behavior is engaged, and a review of current ethical issues affecting local fire departments. Section 4 is universal in its application and should be used in all collegiate programs, as well as in firefighter and fire

Chief Officer Jones & Bartlett Publishers "This edited volume of first-person narratives and empirical studies questions what happens when "male" bodies "do" femininity, the complexities of male femininities, and the conditions under which men engage less with masculinity and more with femininity and the consequences of these practices within a historical moment of gender binary transgressions"--

Fire Fighter Safety and Survival Fire Engineering Books

What does it take to lead people into a burning building? How do the leaders of the New York City Fire Department develop so much loyalty, trust, and grace under pressure that their subordinates will risk their very lives for them? As a high-ranking officer of the FDNY, John Salka is an expert at both practicing and teaching high-stakes leadership. In *First In, Last*

Out, he explains the department's unique strategies and how they can be adopted by leaders in any field—as he has taught them to organizations around the country. In a tough-talking, no-nonsense style, Salka uses real-world stories to convey leadership imperatives such as: first in, last out—your people need to see you taking the biggest risk, as the first one to enter the danger zone and the last to leave manage change—the fire you fought yesterday is not the one you'll be fighting tomorrow communicate aggressively—a working radio is worth more than 20,000 gallons of water create an execution culture—focus your people on the flames, not the smoke commit to reality—never allow the way you would like things to be to color how things are develop your people—let them feel a little heat today or they'll get burned tomorrow Illustrated by

harrowing real-life situations, the principles in First In, Last Out will help managers become more confident, coherent, and commanding. On the web: <http://www.firstinleadership.com> [Firefighting Operations in High-Rise and Standpipe-Equipped Buildings](#) Jones & Bartlett Learning
