FARRELL LEWIS

The Forever Dog Hay House, Inc

A pioneering revolutionary prescription for the health and long life of your pets For two decades, Dr. Martin Goldstein—America's most successful, renowned holistic veterinarian—has healed and helped his animal patients with the same natural therapies that benefit humans. The results have been so astounding that today critically sick pets are brought to him from across the country for a new chance at life and health. In this compelling, very accessible book, Dr. Goldstein explains exactly what holistic medicine is and how it works. By treating the root of a health problem instead of its symptoms, you too can help your animal to regain and maintain its own health, as nature intended. Dr. Goldstein also shares many remarkable true stories of supposedly terminally ill animals who have recovered to full wellness. Inside you'll discover • Why our animals get sick, even when we strive to give them the best of care • An exhaustive A to Z guide of pet ailments—and the best course of action • Why vaccines can do more harm than good • The link between diet and disease—and how the right diet can not only prevent disease but reverse it • How acupuncture, homeopathy, chiropractic, and other alternative options work--safely and painlessly--to restore true health • Specific guidance for the use of herbs, supplements, and natural remedies • The good news (and the bad) about cancer in animals—including extraordinary new treatments and potential cures • Coping with the inevitable death of your pet--both physically and psychologically • And much, much more Plus—the ultimate resource for holistic pet care: an extensive guide to holistic product manufacturers and stores, books, newsletters, Web sites, veterinarians, and associations!

 Self-Care Health Care Guide - BOOK of CURESA Revolutionary book for improving your health and curing and preventing many chronic diseases and conditions that doctors have no cures for. Doing what this book says will cure and prevent at least 80% of all disease.Are these miracle cures ? They only seem like miracle cures because of your unhealthy diet & the saturation of poisons in your food, drinks and water supplies and your personal hygiene items !The Self-Care Health Care Guide is A Health and Food Guide to Cure and Prevent Most Diseases and Medical Conditions. The Self -Care Health Care Guide includes cures for arthritis, bleeding gums, gout, dandruff, headaches and even diseases like breast cancer.This book empowers you with the knowledge to save your own life and cure yourself of any and all disease.This book is not from some author who picked this book to be his next subject to write a book about ! No, this book was written by a

man who had to learn these things he shares in this book just to save his own life ! After doctors diagnosed him with chronic kidney disease, he was told he would be on dialysis or dead by 2008 or 2009. And without any help for his kidneys from the medical profession, he used himself as the guinea pig to see if he could make his kidneys better and thus, save his own life.Doctors have no cures. Doctors only prolong your diseases to maximize their income.To back that up, Chapter 12 states - Now, with 133,000,000 Americans who have at least one chronic disease.....is that what you call the result of the best health care system in the world ? Yes you do ! But it's complete nonsense. Each of those 133,000,000 Americans represents a failure of this country's medical profession. Even with 10,000,000 Americans with chronic disease, we should have declared a national emergency. But with 133,000,000 Americans with at least one chronic disease we not only haven't declared a national emergency, we continue to declare that we have the best health care on the planet ! If every single person had at least one chronic disease, they would still tell you that.....and you would still believe them ! I don't know of any greater incompetence in any profession or line of work than this country's medical profession and health care system.Chapter 9 says - avoiding poisons is the key to preventing and curing cancer. This is why all cancer patients should get serious about avoiding and eliminating poisons..... (in our food drinks and water supplies)Doing what this book says can cure you of any and all diseases that you have; and do so within a matter of months; with improvement coming within just a few weeks. The more things in this book that you do for yourself, the faster the results.Your doctors only treat your diseases. This book empowers you to cure yourself of all disease. Get started today with Self-Care Health Care Guide - The book that brings you real Health Care reform.....a Revolutionary Health Care Guide to save you from doctors' sick care system.

#1 New York Times Bestseller In this pathbreaking guide, two of the world's most popular and trusted pet care advocates reveal new science to teach us how to delay aging and provide a long, happy, healthy life for our canine companions. Like their human counterparts, dogs have been getting sicker and dying prematurely over the past few decades. Why? Scientists are beginning to understand that the chronic diseases afflicting humans—cancer, obesity, diabetes, organ degeneration, and autoimmune disorders—also beset canines. As a result, our beloved companions are vexed with preventable health problems throughout much of their lives and suffer shorter life spans. Because our pets can't make health and lifestyle decisions for

themselves, it's up to pet parents to make smart, science-backed choices for lasting vitality and health. The Forever Dog gives us the practical, proven tools to protect our loyal four-legged companions. Rodney Habib and Karen Becker, DVM, globetrotted (pre-pandemic) to galvanize the best wisdom from top geneticists, microbiologists, and longevity researchers; they also interviewed people whose dogs have lived into their 20s and even 30s. The result is this unprecedented and comprehensive guide, filled with surprising information, invaluable advice, and inspiring stories about dogs and the people who love them. The Forever Dog prescriptive plan focuses on diet and nutrition, movement, environmental exposures, and stress reduction, and can be tailored to the genetic predisposition of particular breeds or mixes. The authors discuss various types of food—including what the commercial manufacturers don't want us to know—and offer recipes, easy solutions, and tips for making sure our dogs obtain the nutrients they need. Habib and Dr. Becker also explore how external factors we often don't think about can greatly affect a dog's overall health and wellbeing, from everyday insults to the body and its physiology, to the role our own lifestyles and our vets' choices play. Indeed, the health equation works both ways and can travel "up the leash." Medical breakthroughs have expanded our choices for canine health—if you know what they are. This definitive dog-care guide empowers us with the knowledge we need to make wise choices, and to keep our dogs healthy and happy for years to come.

Marion Nestle, acclaimed author of *Food Politics*, now tells the gripping story of how, in early 2007, a few telephone calls about sick cats set off the largest recall of consumer products in U.S. history and an international crisis over the safety of imported goods ranging from food to toothpaste, tires, and toys. Nestle follows the trail of tainted pet food ingredients back to their source in China and along the supply chain to their introduction into feed for pigs, chickens, and fish in the United States, Canada, and other countries throughout the world. What begins as a problem "merely" for cats and dogs soon becomes an issue of tremendous concern to everyone. Nestle uncovers unexpected connections among the food supplies for pets, farm animals, and people and identifies glaring gaps in the global oversight of food safety.

Updating recommendations last made by the National Research Council in the mid-1980s, this report provides nutrient recommendations based on physical activity and stage in life, major factors that influence nutrient needs. It looks at how nutrients are metabolized in the bodies of dogs and cats, indications of nutrient deficiency, and diseases related to poor nutrition. The report provides a valuable resource for industry professionals formulating diets, scientists setting research agendas, government officials developing regulations for pet food labeling, and as a university textbook for dog and cat nutrition. It can also guide pet owners feeding decisions for their pets with information on specific nutrient needs, characteristics of different types of pet foods, and factors to consider when feeding cats and dogs.

Growing numbers of pet owners are giving their pets dietary supplements in hopes of supporting their health. Many people presume that supplements are safer than drugs, but the reality is that there are very limited safety data on dietary supplements for pets. Many challenges stand in the way of determining whether animal dietary supplements are safe and at what dosage. Supplements considered safe in humans and other species are not always safe in horses, dogs, and cats. An improved adverse event reporting system is badly needed. Also, the absence of laws and regulations that specifically address animal dietary supplements causes considerable confusion to the industry and to the public. Clear and precise regulations are needed to allow only safe dietary supplements on the market. This book examines issues in determining safety of animal dietary supplements in general, and the safety of three animal dietary supplements; lutein, evening primrose oil, and garlic, in particular.

And no, you won't need to lead a pack of dogs on a hunting expedition! As a holistic veterinarian and scientist, Dr. Gary Richter helps dog and cat owners to navigate the thicket of treatment options and separate the fact from the fiction. He wants us to use what actually works, not just what Western science or alternative medicine say "should" work. This multifaceted approach to health is known as integrative medicine. Dr. Richter examines traditional medicine from many cultures alongside modern medical techniques, describing the best of complementary care and the best of conventional veterinary medicine. Every treatment he recommends has the backing of scientific research or years of successful outcomes in his clinical practice. After explaining the treatment, he offers specific recommendations for an integrative approach to common diseases, including allergies, skin conditions, diabetes, heart disease, and cancer. A holistic approach to health includes nutrition, as it sets up the foundation for your pet's health. Dr. Richter cuts through the hype in the pet-food world and explains how to choose the best commercial foods and supplements, and even includes both raw and cooked dog- and cat-food recipes for general diet as well as to treat specific needs. He also explains how we can use the right foods and supplements to "hack" the body's processes, including the immune system.

Entertaining and informative, *Pets in America* is a portrait of Americans' relationships with the cats, dogs, birds, fishes, rodents, and other animals we call our own. More than 60 percent of U.S. households have pets, and America grows more pet-friendly every day. But as Katherine C. Grier demonstrates, the ways we talk about and treat our pets—as companions, as children, and as objects of beauty, status, or pleasure—have their origins long ago. Grier begins with a natural history of animals as pets, then discusses the changing role of pets in family life, new standards of animal welfare, the problems presented by borderline cases such as livestock pets, and the marketing of both animals and pet products. She focuses particularly on the period between 1840 and 1940, when the emotional, behavioral, and commercial characteristics of contemporary pet keeping were established. The story is filled with the warmth and humor of anecdotes from period diaries, letters, catalogs, and newspapers. Filled with illustrations reflecting the whimsy, the devotion, and the commerce that have shaped centuries of American pet keeping, *Pets in America* ultimately shows how the history of pets has evolved alongside changing ideas about human nature, child development, and community life. This book accompanies a museum exhibit, "Pets in America," which opens at the McKissick Museum in Columbia, South Carolina, in December 2005 and will travel to five other cities from May 2006 through May 2008.
