*Resolutions Adopted by
the General Assembly:
1956-58* Fred McAllen
In The Human Factor, Kim
Vicente coined the term
'Human-tech' to describe

a more encompassing and
ambitious approach to the
study of Human-
Technology Interaction
(HTI) than is now evident
in any of its participating
disciplines, such as
human factors, human-
computer interaction,
cognitive science and
engineering, industrial

design, informatics or
applied psychology.
Observing that the way
forward is 'not by widgets
alone,' Vicente's Human-
tech approach addresses
every level--physical,
psychological, team,
organizational, and
political--at which
technology impacts

quality of life, identifies a human or societal need, and then tailors technology to what we know about human nature at that level. The Human Factor was written for a broad audience, in part to educate general readers beyond the HTI community about the need to think seriously about the tremendous impact that poorly designed technology can have, ranging from user frustration to the tragic loss of human life. The articles collected in this book provide much of the

technical material behind the work that was presented in The Human Factor, and the commentaries by Alex Kirlik situate these articles in their broader historical, scientific and ethical context. This collection of articles and commentaries forms a set of recommendations for how HTI research ought to broaden both its perspective and its practical, even ethical, aspirations to meet the increasingly complicated challenges of designing technology to support

human work, to improve quality of life, and to design the way will live with technology. As the first book both to integrate the theory and research underlying Human-tech, and to clearly delineate the scientific challenges and ethical responsibilities that await those who either design technology for human use, or design technology that influences or even structures the working or daily lives of others, Human-tech: Ethical and Scientific Foundations will appeal to

the broad range of students and scholars in all of the HTI disciplines. *Technical Papers And Addresses Presented At The Annual Meeting Of The Technical Association Of The Pulp And Paper Industry* Oxford University Press

To invest successfully or trade in Stocks, Options, Forex, or even Mutual Funds, it is imperative to know AND understand price and market movements that can only be learned from Technical Analysis. You should NEVER attempt Trading or

Investing without it! My 25 years experience has taught me that 'Every book on the market' regarding Charting and Technical Analysis are seemingly worthless! All seem to find yet another creative way to tell you to "Buy Low and Sell High!" And they offer NO in-depth understanding or analysis about WHO is buying and WHO is selling, and when. Point is, anyone, experienced or not, can show you a picture of a Chart and tell you to buy at the bottom and sell at the top. That is

simple 'hindsight', and is always 20/20! This book is different! It is IN-DEPTH – EXPLAINED and you WILL learn price movements and technical analysis from this information! You will understand and recognize tops and bottoms in the market and in particular stocks, AS they are forming. This is highly valuable information, and you should NEVER attempt to trade or invest without this knowledge! Mutual Funds? Most people think they do not need this information because the

have a Mutual Fund. That could not be farther from the truth. Investing your hard-earned money should be done with your own knowledge of market direction, when to buy, and when to move your money to safety. Without this knowledge you are at the mercy of a salesperson hungry to earn a commission. Thus, invariably entering the market at the wrong time and in the wrong investment. No one else has your best interest in mind, either learn to protect your money or

keep it in the bank. It's that simple. The next move is yours.

 Singing on stage can be a daunting prospect for actors, particularly for those who have not sung before. Yet singing should

be an essential part of every actor's toolkit. *Singing on Stage: An Actor's Guide* gives an insight for the first time into the vocal techniques and practical approaches that have been developed over generations as an integral part of the training at the Royal Academy of Dramatic Art. Jane Streeton and Philip Raymond are highly experienced performers and teachers; their book encourages each actor to explore their own authentic voice as opposed to offering a

'one-size-fits-all' or 'quick-fix' approach. Written in an accessible, friendly and enabling style, *Singing on Stage: An Actor's Guide* is packed with exercises to develop the actor's skills and gives an overview of:

- elements of technique
- how to work on a song
- the process of singing theatrically
- how to choose the best songs for you

Featuring inspirational listening suggestions and the observations of successful performers and practitioners, *Singing on*

Stage: An Actor's Guide is the must-have companion for complete beginners as well as for experienced actors who wish to develop their understanding of singing on stage.

"There's branding and there's high-tech branding and the differences are enormous. The authors do a great job in isolating the many important principles of branding in an

increasingly high-technology world." Al Ries Chairman, Ries & Ries Co-author, *The 11 Immutable Laws of Internet Branding* "The internet and e-commerce have inspired phenomenal changes in the business world, but at least one thing has remained constant: the importance of building a strong brand." Ed Zander President, Sun Microsystems, Inc. "Building a strong consumer brand has always been a monumental task. But, never more so than today,

with the explosion of technology, innovation and communication. Paul Temporal has taken a pragmatic and credible approach to suggesting how this effort can be tackled, through his reiteration of basic branding principles, to his reliving case studies of companies which point the way forward. Along the way, he reminds us that branding is all about building a long-lasting and meaningful relationship with consumers." Aaron Boey Vice-President, Marketing Philips

Consumer Electronics, Asia-Pacific & Middle-East "Paul Temporal and KC Lee offer us a book full of thought-provoking views and case studies relevant to Internet-Age companies. Insightful and informative, this book challenges you to think through every element of your online branding and customer experience. It is a useful read for any executive who is in charge of brand strategy development and management." Jay Sibel Vice-President, Communications and High

Technology Practice A.T. Kearney "In the hi-tech age, building and sustaining great brands are even more critical than ever. The strength of the brand is the only differentiator in a world of connected and knowledgeable customers." Steve Ballmer President, Microsoft
