“A Way to Garden prods us toward that ineffable place where we feel we belong; it’s a guide to living both in and out of the garden.” —The New York Times Book Review For Margaret Roach, gardening is more than a hobby, it’s a calling. Her unique approach, which she calls “horticultural how-to and woo-woo,” is a blend of vital information you need to memorize and intuitive steps you must simply feel and surrender to. In *A Way to Garden*, Roach imparts decades of garden wisdom on seasonal gardening, ornamental plants, vegetable gardening, design, gardening for wildlife, organic practices, and much more. She also challenges gardeners to think beyond their garden borders and to consider the ways gardening can enrich the world.

Brimming with beautiful photographs of Roach’s own garden, *A Way to Garden* is practical, inspiring, and a must-have for every passionate gardener. *A New Garden Ethic* "O'Reilly Media, Inc."

Explains how to maintain a healthy lawn by preparing the soil, planting grasses suitable for the climate, and treating common problems

In a time of climate change and mass extinction, who we garden for matters more than ever. Our landscapes push aside wildlife and in turn diminish our genetically-programmed love for wildness. How can we get ourselves back into balance through gardens, to speak life's language and learn from other species? Plenty of books tell home gardeners and professional landscape designers how to garden sustainably, what plants to use, and what resources to explore. Yet few examine why our urban wildlife gardens matter, and not just for ourselves, but for the larger human and animal communities. Author Benjamin Vogt addresses why we need a new garden ethic, and why we urgently need wildness in our daily lives — lives sequestered in buildings surrounded by monocultures of lawn and concrete that significantly harm our physical and mental health. He examines the psychological issues around climate change and mass extinction as a way to understand how we are short circuiting our response to global crises, especially by not growing native plants in our gardens. Simply put, environmentalism is not political, it's social justice for all species marginalized today and for those facing extinction tomorrow. By thinking deeply and honestly about our built landscapes, we can create a compassionate activism that connects us more profoundly to nature and to one another.
