## CARLA DONNA

### News-notes Routledge

This edition includes chapters on storage and transportation of hazardous wastes, hazardous waste spills and spill clean-ups, and low level red waste management. Industry experts discuss innovative waste treatment technologies and land disposal

### Evaluating Hazardous Waste Education & Training Edward Elgar Publishing

Comprising two volumes of the work of two of the world's leading analysts of risk, risk assessment and risk management, this text covers risk analysis and management in society, in multinationals and in the global arena.

### Logan Airside Improvements Planning Project Rowman & Littlefield

We live in a 'risk society' where the identification, distribution and management of risks, from new technology, environmental factors or other sources are crucial to our individual and social existence. In *The Social Contours of Risk*, Volumes I and II, two of the world's leading and most influential analysts of the social dimensions of risk bring together their most important contributions to this fundamental and wide-ranging field. Volume I collects their fundamental work on how risks are communicated among different publics and stakeholders, including local communities, corporations and the larger society. It analyses the problems of lack of transparency and trust, and explores how even minor effects can be amplified and distorted through media and social responses, preventing effective management. The final section investigates the difficult ethical issues raised by the unequal distribution of risk depending on factors such as wealth, location and genetic inheritance - with examples from worker and public protection, facility-siting conflicts, transporting hazardous waste and widespread impacts such as climate change. Volume II centres on the analysis and management of risk in society, in international business and multinationals, and globally. The 'acceptability' of risk to an individual depends on the context, whether the larger society or in, for example, a corporate framework. Their work clarifies the structures and processes for managing risks in the private sector and the factors that produce or impede effective decisions. The authors demonstrate that corporate culture is crucial in determining risk management. They analyse the transfer of corporate risk management systems from industrial to developing countries, and how globalization is spreading and creating new kinds of risk - the combination of traditional and modern hazards presented by climate change, technology transfer and economic growth. They describe the new priorities and capacities needed to deal with these enhanced vulnerabilities around the globe.

### The Green Book Academic Press

The papers presented in this volume cover a range of policies and technologies to minimize waste in the chemical and petrochemical industries.

### Departments of Veterans Affairs and Housing and Urban Development, and independent agencies appropriations for 1990 IGI Global

This major reference work the first of its kind provides a comprehensive and authoritative introduction to the large and growing literature on contingent valuation. It includes entries on over 7,500 contingent valuation papers and studies from over 130 countries covering both the published and grey literatures. This book provides an interpretive historical account of the development of contingent valuation, the most commonly used approach to placing a value on goods not normally sold in the marketplace. The major fields catalogued here include culture, the environment, and health application. This bibliography is an ideal starting point for researchers wanting to find other studies that have valued goods or used techniques similar to those they are interested in. For those wanting to conduct meta analyses, the book will serve as an invaluable guide to source material. For those wanting to conduct meta analyses, the book will serve as an invaluable guide to source material. In addition to the print edition we offer access, for purchasers of the book, to a website

providing the contents of as a searchable Word document and in a variety of standard bibliographic database forms. Contingent Valuation is an indispensable reference source for researchers, scholars and policymakers concerned with survey approaches to the problem of environmental valuation.

### Criminology Springer Science & Business Media

Prepared by the Groundwater Risk Assessment Task Committee for the Water Pollution Management Committee of the Environmental Engineering Division of ASCE. This report discusses the control of contaminated groundwater and the use of risk assessment to mitigate this contamination. The report explores such issues as defining the level of contamination, determining which substances are contaminants, and deciding the level of restoration needed. These and other issues are discussed within the framework of risk assessment and risk management. Critical components of risk assessment and risk management are described, as are their strengths and weaknesses.

### Emergency and Disaster Management: Concepts, Methodologies, Tools, and Applications Handbook on Household Hazardous Waste

"Guidance on use and interpretation of the fact sheets" (p. 33-34).

### Waste Management in the Chemical and Petrochemical Industries IUCN

A practical guide to how the university can serve as a model of environmental stewardship. Universities can teach and demonstrate environmental principles and stewardship by taking action to understand and reduce the environmental impacts of their own activities. *Greening the Ivory Tower*, a motivational and how-to guide for staff, faculty, and students, offers detailed "greening" strategies for those who may have little experience with institutional change or with the latest environmentally friendly technologies. The author was project manager of Tufts CLEAN!, a program whose mission was to reduce Tufts University's environmental impact. After analyzing the campus's overall environmental impact (each year the main campus serves 5 million meals; makes 14 million photocopies; uses 65 tons of paper towels, 110 million gallons of water, and 23 million kWh of electricity; and generates over 2,000 tons of solid waste), the team decided to focus on food waste, transportation, energy efficiency, and procurement practices. An essential discovery was that to change practices requires the personal commitment and direct involvement of those who have the responsibility for operating the institution on a daily basis. Although the Tufts experience forms the basis for many of the proposals in the book, the story goes well beyond Tufts; the author includes examples of successful practices from many other institutions.

### Proceedings OUP Oxford

This book explores siting dilemmas - situations in which an "authority" (e.g., Congress, a consortium of utilities) deems it in the best interest of society to build a facility such as an incinerator, but opponents living near the proposed site thwart the plan. Facility developers typically attribute local opposition to selfishness or radically inaccurate views of the risks posed by the facility. We examine the validity of these conclusions by looking in depth at the psychological response that arises when residents are faced with the prospect of living near waste disposal facilities. The particular siting dilemma considered in this book is the problem of how to "dispose" of the high-level nuclear wastes accumulating at nuclear power plants in the United States. These wastes, in the form of "spent" fuel rods, will emit dangerous levels of radioactivity for thousands of years - anywhere between 10,000 and 100,000 years, depending on the margin of safety one adopts. The current proposal is to encase the spent fuel in corrosion-resistant canisters and then to bury these canisters deep underground in a geologic repository. The two of us became involved with the high-level waste issue in 1986 as part of an interdisciplinary research team hired by the State of Nevada. The charge of this team was to estimate the socioeconomic impacts that would accompany a repository if it were built at Yucca Mountain, approximately 100 miles northwest of Las Vegas.

### Understanding Supply Chains : Concepts, Critiques, and Futures CRC Press

Waste Management Practices: Municipal, Hazardous, and Industrial. Second Edition addresses the three main categories of wastes (hazardous, municipal, and "special" wastes) covered under federal

regulation outlined in the Resource Conservation and Recovery Act (RCRA), an established framework for managing the generation, transportation, treatment, storage, and disposal of several forms of waste. Focusing on integrating the technical and regulatory complexities of waste management, this book covers the historical and regulatory development of waste management and the management of municipal solid wastes. It also addresses hazardous wastes and their management, from the perspectives of identification, transportation, and requirements for generators as well as the treatment, storage, and disposal facilities. Features: Covers the three main categories of wastes under regulation in the United States Incorporates an extensive set of problems, presented at the end of several chapters as appendices Includes numerous review/homework questions at the end of each chapter Highlights special categories of waste that may not fit precisely into either RCRA Subtitle D (Solid Wastes) or Subtitle C (Hazardous Wastes) In addition to the end-of-chapter problems provided in all chapters of this book, the text also contains practical exercises using data from field situations. Waste Management Practices: Municipal, Hazardous, and Industrial, Second Edition is an ideal textbook or reference guide for students and professionals involved in the management of all three categories of wastes.

[Energy Research Abstracts](#) Springer Science & Business Media

While innovative technologies in remediation need to be developed, so do innovative ways of site assessment. This monograph describes the development, testing, and performance of a new laser-induced fluorescence soil probe. A screening tool for site characterization, this probe has the potential to provide an economical, rapid assessment of contaminated sites. Cone Penetrometer testing equipment advances the probe into the subsurface. The probe identifies hydrocarbon classes using a multi-channel excitation-emission matrix. This technique facilitates the collection of significant amounts of subsurface information - surpassing conventional data collection methods - that can be used to rapidly identify areas of concern beneath a site. The technology has significant application for the following: Rapid environmental site assessment Monitoring remediation programs Monitoring manufacturing processes and industrial waste water operations Subsurface Contamination Monitoring Using Laser Fluorescence provides comprehensive reference material for researchers and engineers as well as engineering consultants interested in subsurface monitoring techniques or further development of this technology. It describes innovative technology that focuses on finding cost effective solutions for site assessment and remediation.

[Contingent Valuation](#) Routledge

Connections among theory, research, and practice are the heart and soul of criminology. This book offers a comprehensive and balanced introduction to criminology, demonstrating the value of understanding the relationships between criminological theory, research, and practice in the study of crime and criminal behavior. Utilising a range of case studies and thought-provoking features, it encourages students to think critically and provides a foundation for understanding criminology as a systematic, theoretically grounded science. It includes: A comprehensive overview of crime in American society, including the nature and meaning of crime and American criminal law as well as the scientific study of crime, A concise, straightforward, and practical approach to the study of the American criminal justice system and its various components, including individual chapters on police, courts, and corrections, An overview of criminological theory, including classical, biological, psychological and sociological approaches, A survey of typologies of criminological behavior including interpersonal violent crimes, property crime, public order crime, organized and white collar crime, state crime, environmental harm and cybercrime, Concluding thoughts exploring challenges facing criminal justice policy and the future of criminological theory. This new edition has been thoroughly revised and updated and includes brand new chapters on corrections, courts, criminal law, law enforcement, and technology and cybercrime. It is packed with useful and instructive features such as themed boxed case studies in every chapter, critical thinking questions, lists of further reading, and links to e-resources. A companion website includes PowerPoint slides for lecturers, links to useful resources, and lists of further reading.

[Siting Hazardous Waste Treatment Facilities](#) Praeger

This book grew out of the conviction that the preparation and management of large-scale technological projects can be substantially improved. We have witnessed the often unhappy course of societal and political decision making concerning projects such as hazardous chemical installations, novel types of electric power plant or storage sites for solid wastes. This has led us to believe that probabilistic risk analysis, technical reliability analysis and environmental impact analysis are necessary but insufficient for making acceptable, and justifiable, social decisions about such projects. There is more to socio-technical decision making than applying acceptance rules based on negligibly low accident probabilities or on maximum credible accidents. Consideration must also be given to psychological, social and political issues and methods of decision making. Our conviction initially gave rise to an international experts' workshop titled 'Social decision methodology for technological projects' (SDMTP) and held in May 1986 at the University of Groningen, the Netherlands, at a time when Cvetkovich spent a sabbatical there. The workshop - aimed at surveying the issues and listing the methods to address them - was the first part of an effort whose second part was directed at the production of this volume. Plans called for the book to deal systematically with the main problems of socio-technical decision making; it was to list a

number of useful approaches and methods; and it was to present a number of integrative conclusions and recommendations for both policy makers and methodologists.

[Using the Agricultural, Environmental, and Food Literature](#) CRC Press

In a world of earthquakes, tsunamis, and terrorist attacks, emergency response plans are crucial to solving problems, overcoming challenges, and restoring and improving communities that have been affected by these catastrophic events. Although the necessity for quick and efficient aid is understood, researchers and professionals continue to strive for the best practices and methodologies to properly handle such significant events. *Emergency and Disaster Management: Concepts, Methodologies, Tools, and Applications* is an innovative reference source for the latest research on the theoretical and practical components of initiating crisis management and emergency response. Highlighting a range of topics such as preparedness and assessment, aid and relief, and the integration of smart technologies, this multi-volume book is designed for emergency professionals, policy makers, practitioners, academicians, and researchers interested in all aspects of disaster, crisis, and emergency studies.

[Risk Assessment for Groundwater Pollution Control](#) CRC Press

Written by leading practitioners, this updated edition looks at household hazardous waste and its collection/management, including chapters on planning a facility, marketing to affect behavior change, and encouraging extended product stewardship. Includes information on new regulations and advances and a comprehensive reference section.

[Selected Water Resources Abstracts](#) Springer Science & Business Media

This reference provides the groundwork, tools, and terminology required when conducting specialized searches for information and resources pertaining to traditional and emerging fields of agriculture. The editors present 16 contributions from librarians and other information workers that offer information on research resources across the academic a

[Standard Handbook of Hazardous Waste Treatment and Disposal](#) ASCE Publications

Since the 1960s and 70s, a wave of environmental awareness has swept the United States. News reports of oil spills, DDT damage to wildlife, and the nuclear near-disaster at Three Mile Island have, along with other incidents, contributed to a widespread distrust of industry and a collective fear of all chemical processing facilities. This fear has been translated, according to Kent Portney, into local political opposition to the siting of much needed hazardous waste treatment plants--the NIMBY (not in my backyard) syndrome. The failure of federal, state, and local governments to effectively control improper hazardous waste disposal has further strengthened the NIMBY syndrome. Portney argues that once it is understood what motivates the array of local attitudes toward hazardous waste treatment facilities, and the political constraints placed on the search for solutions, effective compromises can be reached. The book begins by focusing on the facility siting dilemma and what can be done to find new policies that work. Chapter two analyzes what does and does not work in easing the effects of the NIMBY syndrome. Democratic political processes are investigated in chapter three, especially those that contribute to the development of NIMBY opposition. Chapters four and five present empirical correlates of changes in peoples' attitudes and explain how people can ultimately be convinced to support local hazardous waste treatment facilities. Social, cultural, and psychological construction of opposition to facility siting is studied in chapter six. Portney presents viable solutions to the facility siting problem, in light of the NIMBY syndrome, in the concluding chapter. This important book will be of great value to practitioners facing actual siting decisions, members of statewide siting boards, private sector parties wishing to site facilities, and those teaching courses in environmental policy or politics.

[Handbook of Hazardous Materials](#) McGraw-Hill Companies

Leading pollution control educators and practicing professionals describe how various combinations of different cutting-edge process systems can be arranged to solve air, noise, and thermal pollution problems. Each chapter discusses in detail a variety of process combinations, along with technical and economic evaluations, and presents explanations of the principles behind the designs, as well as numerous variant designs useful to practicing engineers. The emphasis throughout is on developing the necessary engineering solutions from fundamental principles of chemistry, physics, and mathematics. The authors also include extensive references, cost data, design methods, guidance on the installation and operation of various air pollution control process equipment and systems, and Best Available Technologies (BAT) for air thermal and noise pollution control.

[Proceedings of the 41st Industrial Waste Conference May 1986](#), Purdue University Transportation Research Board

*Handbook of Hazardous Materials* is a one-volume compendium of hazardous materials that discusses the toxic effects of these materials on human health and the global environment. It provides comprehensive coverage of individual toxic elements, covers hazardous material groups, and includes more general articles such as evaluation and testing of carcinogens, transport of pollutants, and inhalation toxicology. The fully referenced articles are presented in alphabetical order. The book features a subject index as well as numerous cross-references. Individual articles are preceded by a topical outline and discuss the origin, prevalence, mechanisms of toxicity and damaging effects of each hazardous material. Comprehensive coverage of individual toxic elements, including Asbestos Alar Lead Mercury Coverage of hazardous material groups, such as Pesticides Food additives Nitrogen compounds More general articles, such as Evaluation and testing of carcinogens Transport of pollutants Inhalation toxicology
