Organizational Maintenance, Truck, 5-ton, 6X6, M939 Series (diesel) Mike Byrnes & Associates, Inc.

Miniaturization and the availability of special components make many things possible, especially in commercial vehicle modelling. A few years ago, one was happy if a model drove at all, but today there is hardly any original function that cannot be reproduced in the model. One model builder who does this with enthusiasm is Jürgen Ritter. Whether with his road trucks or his much acclaimed agricultural machinery models, his models are always filled with special functions and special ideas. In this book, he shows his unusual construction methods, exciting ideas for special functions and how these can be realized - often with simple means. So spice up your model with the help of this richly illustrated reference book! From the content • Basics of the used Machines with small tips • Electronic components used • Information and scale • Electromechanical solutions • Movements by wire rope • Electrical solutions • Motor limit switches • Vehicle lighting • Sound modules • Details and stickers

This SAE Standard provides the minimum requirements for high power two conductor jumper cable plug and receptacle for truck-trailer jumper cable systems. It includes the test procedures, design, and performance requirements. This document covers receptacles rated at more than 30A (Ampere) up to and including 150A and is intended for a single circuit with one power conductor and one common return conductor. Single conductor high current connectors are not recommended for future designs because of inadequate ground return through 5th wheel / king pin. Cable size selection is to be made by the vehicle OEM for specific applications and the specific voltage drop requirements of those

applications. This SAE Standard covers two variants of high power two conductor connections: a heavy duty version with horizontally aligned pins, typically for lift-gate battery charging and a medium duty version with vertically aligned pins: typically for loads such as power tarpaulins. Provide a standard for high current connections between a tractor and a (semi-) trailer to provide power to application specific equipment installed on the trailer. Organizational Maintenance Manual for Truck Tractor, 10-ton, 6x6, M123 (2320-395-1875), M123C (2320-294-9552), M123A1C (2320-226-6081), M123E2 (2320-879-6177), and Truck, Cargo, 10-ton, 6x6, M125 (2320-219-7340). Bumper to Bumper Over 2,800 total pages ... INTRODUCTION Today's operational environment presents threats the Army has not faced in nearly 20 years. Against peer competitors, the joint force may face air parity or even localized enemy air overmatch, challenging the assumption of air superiority the joint force has held since the Korean War. This will make maneuver forces vulnerable to air attack by fixed- and rotary-wing aircraft, unmanned aircraft systems, and cruise missiles. Maneuver forces lack capacity and capability to address these threats and the Army requires a speedy response. Stinger missiles provide a key capability for maneuver forces to defend themselves from aerial observation and attack. However, without direct involvement from senior brigade combat team leaders and effective leader training, these missiles will become dead weight at best or a fratricide in waiting at worst. Units must plan effectively to utilize this capability and ensure it ties directly to their scheme of maneuver as opposed to simply task-organizing one Stinger team per company.
