Convergence of Blockchain, AI and IoT: A Digital Platform discusses the convergence of three powerful technologies that play into the digital

revolution and blur the lines between biological, digital, and physical objects. This book covers novel algorithms, solutions for addressing issues in applications, security, authentication, and privacy. Discusses innovative technological upgradation and significant challenges in the current era Gives an overview of clinical scientific research that

enables smart diagnosis through artificial intelligence Provides an insight into how disruptive technology enabled with the self-running devices and protection mechanism is involved in an augmented reality with blockchain mechanism Talks about neural science being capable of enhancing deep brain waves to predict an overall improvement in

human thoughts and behaviours Covers the digital currency mechanism in detail Enhances the knowledge of readers about smart contract and ledger mechanism with artificial intelligence and blockchain mechanism Targeted audiences range from those interested in the technical revolution of blockchain, big data and the Internet of Things, to research scholars and the professional market.

InfoWorld is targeted to Senior IT professionals. Content is segmented into Channels and Topic Centers. InfoWorld also celebrates people, companies, and projects. *The Scribe Method* DSpark AI-Assisted Special Education for Students With Exceptional Needs is a comprehensive and insightful exploration of the intersection between special education and

artificial intelligence (AI). This book delves into the fundamental principles, historical background, and current challenges faced in providing effective education to students with special needs. It compares traditional education methods with special education practices and highlights the limitations of conventional classrooms in addressing the diverse learning difficulties of exceptional students. The book also explores the impact of AI-based special education on both

educators and students, providing valuable insights and strategies for stakeholders to adopt and implement these technologies effectively. Legal aspects surrounding the right to education for disabled individuals are discussed, ensuring a comprehensive understanding of the legal framework supporting special education initiatives. Real-world case studies and success stories serve as inspiration, illustrating the transformative potential of AI in special education.

Featuring contributions from academicians and professionals from esteemed organizations, this book provides hands-on chapters that cover topics such as research challenges, data analysis, machine learning, intelligent learning environments, IoT wearable devices, comprehensive systems with intelligent teacher assistance, parental and societal roles, and the prospects of AI-assisted special education. Whether educator, mentor, training

professional, researcher, or student, AI-Assisted Special Education for Students With Exceptional Needs offers a wealth of knowledge and practical insights.

Artificial Intelligence (AI) in Healthcare is more than a comprehensive introduction to artificial

intelligence as a tool in the generation and analysis of healthcare data. The book is split into two sections where the first section describes the current healthcare challenges and the rise of AI in this arena. The ten following chapters are written by specialists in each area, covering the whole healthcare ecosystem. First, the AI applications in drug design and drug development are presented followed by its applications in the field of cancer diagnostics,

treatment and medical imaging. Subsequently, the application of AI in medical devices and surgery are covered as well as remote patient monitoring. Finally, the book dives into the topics of security, privacy, information sharing, health insurances and legal aspects of AI in healthcare. Highlights different data techniques in healthcare data analysis, including machine learning and data mining Illustrates different applications and challenges across the

Intelligence (AI) is the new electricity of our times. It is revolutionizing industries the world over, and changing how we fundamentally view and understand work. Superhuman Innovation argues that AI will supercharge the workforce and the world of work, can be harnessed to deliver powerful change to how companies innovate and gain competitive advantage. It is a practical guide to how AI and Machine Learning are impacting not only how businesses, brands,

and agencies innovate, but also what they innovate: products, services and content. In a world of product and pricing parity, the delivery of superior service experience has become the new marketing, and the new real competitive edge. With AI companies can harness the power of data, personalization and on-demand availability, at the touch of an intelligent button. Superhuman Innovation discusses how AI will serve the superstar innovators of tomorrow, by enabling them to see

deeper insights and set sail for higher goals. It unearths a powerful five-pronged model which describes how AI enables innovation through the offerings of Speed (facilitating work processes), Understanding (revealing and mastering deep insights), Performance (customization of delivery to customers), Experimentation (the iterative process of reinvention and feedback) and Results (tangible, measurable and optimizable results). The

book is supported by varied and innovative case studies from a variety of industries. [Intelligent Communication Technologies and Virtual Mobile Networks](#) Springer Nature

Digitalization, Sustainable Development, and Industry 5.0 offers cutting-edge multidisciplinary research, with expert insights on the technologies and strategies businesses use in the twin transition process. **A Project-Based Approach to Translation Technology** Springer
Industry 5.0 is the successor of the 'Industry 4.0' concept which employed high technology in the manufacturing industry. Industry 5.0 is a

new idea that adds a human touch to the work of robots and smart machines. The basic idea of humans and machines working together is to increase efficiency and effectivity, like the 'Internet of things' (IoT). It aims to merge the increasing cognitive computing abilities of the robots with the intelligence and resourcefulness of the humans. The progress of Industry 5.0 is inevitable. As the technology grows more each day, we find ways to make our work

simpler. The development of such technologies to make the world more efficient requires its manufacturers, i.e., humans who collaborate with these machines and technologies. Humans are indispensable resources, as what a machine can do is limited. And with all these efficiencies we have come so far, there is no path leading us back. With adoption of new concepts comes a paradigm shift as development continues and we move from Industry 4.0 which speaks

of the "future of production," its primary purpose continues to be achieving seamless connectivity between machines and IT systems for higher productivity and efficiencies across the value chain. Overall, it focuses mainly on traditional financial and operational KPIs. Whereas Industry 5.0 gives a human touch to the concept of 4.0 keeping in mind the well-being of the environment and society, making the machines and humans work together on a path of 'Green Future'.

Industry 5.0 has the balance of both humans and technologies which benefits the ecosystem, with discovery of new energy sources and renewable resources, helping in a sustainable working environment. It can be used to reduce harmful residue caused due to manufacturing processes and recycle rare materials. Taking this theme, the multidisciplinary congress on "Industry 5.0 and Paradigm Shift: Emerging Challenges" will highlight research challenges and

open issues that should be further developed to realize Industry 5.0.

The book is a collection of high-quality research papers presented at Intelligent Communication Technologies and Virtual Mobile Networks (ICICV 2023), held at Francis Xavier Engineering College, Tirunelveli, Tamil Nadu, India, during February 16–17, 2023.

The book shares knowledge and results in

theory, methodology, and applications of communication technology and mobile networks. The book covers innovative and cutting-edge work of researchers, developers, and practitioners from academia and industry working in the area of computer networks, network protocols and wireless networks, data communication technologies, and network security.

time translation
experience, with its
translation platforms,
management systems,
and teamwork. This book
is divided into seven
chapters reflecting the
building blocks of a
project-based approach to
translation technology.
The first chapter identifies
the core elements of

translation environment tools and collaborative work methods, while Chapters 2 and 4 review the concept of translation memory and terminology databases and their purposes. Chapter 3 covers machine translation embedded in the technology, and the other chapters discuss human and technological quality assurance, digital ethics and risk management, and web-based translation management systems. Each chapter follows a common format and ends

with project-based assignments. These assignments draw and build on real-time contexts, covering the consecutive steps in the workflow of large and multilingual translation projects. Reviewing the many translation technology tools available to assist the translator and other language service providers, this is an indispensable book for advanced students and instructors of translation studies, professional translators, and technology tool providers.

AI Lioncrest Publishing Meetings, partings, loves and losses in rural France are dissected with compassion. The late wedding guest isn't your cousin but a drunken chancer. The driver who gives you a lift isn't going anywhere but off the road. Snow settles on your car in summer and the sequins found between the pages of a borrowed novel will make your fortune. Pagano's stories weave together the mad, the mysterious and the dispossessed of a

rural French community with honesty and humour. A superb, cumulative collection from a unique French voice. Why Peirene chose to publish this book: This is a spellbinding web of stories about people on the periphery. Pagano makes rural France her subject matter. She invokes the closeness of a local community and the links between the inhabitants' lives. But then she reminds us how little we know of each other. 'Devastatingly beautiful.' Le Soir,

Belgium 'A treasure hunt that you can follow from title to title...fine-tipped drawings of little bits of the world that attach themselves to each other imperceptibly.' Xavier Houssin, Le Monde 'Pagano succeeds because of the range of her insight and the skill with which she shifts register: from wistfulness to blunt force, or from fantasy to naturalism.' Chris Power, The Guardian 'Endlessly beautiful and poignant.' Le Monde books of the year 2012 'With animal writing,

Emmanuelle Pagano invites herself to the side of rebels and solitaires.' Marine Landrot, Télérama

 There exists a history of great expectations and large investments involving artificial intelligence (AI). There are also notable shortfalls and memorable disappointments. One major controversy regarding AI is just how mathematical a field it is or should be. This text

includes contributions that examine the connections between AI and mathematics, demonstrating the potential for mathematical applications and exposing some of the more mathematical areas within AI. The goal is to stimulate interest in people who can contribute to the field or use its results. Included in the work by M. Newborn on the famous Deep Blue chess match. He discusses highly mathematical techniques involving graph theory,

combinatorics and probability and statistics. G. Shafer offers his development of probability through probability trees with some of the results appearing here for the first time. M. Golumbic treats temporal reasoning with ties to the famous Frame Problem. His contribution involves logic, combinatorics and graph theory and leads to two chapters with logical themes. H. Kirchner explains how ordering techniques in automated reasoning systems make

deduction more efficient. Constraint logic programming is discussed by C. Lassez, who shows its intimate ties to linear programming with crucial theorems going back to Fourier. V. Nalwa's work provides a brief tour of computer vision, tying it to mathematics - from combinatorics, probability and geometry to partial differential equations. All authors are gifted expositors and are current contributors to the field. The wide scope of the volume includes research problems, research tools

and good motivational material for teaching.

AI for Everyone: benefitting from and building trust in the technology Ashe Publishing

This two-part volume examines current pedagogical modules, research directions and other emerging issues in public relations and communication management in Africa. In comparison to its Western and Asian counterparts, the literature on public

relations management in Africa is limited, and much of it is examined through the lenses of Western philosophies and pedagogies that do not generally resonate with Africa's socioeconomic, political, and cultural contexts. This book aims to change that. Through analyzing the organizational dynamic, Volume 1 brings together contributors from across Africa to provide valuable insights into how public relations contributes to organizational effectiveness on the

continent. Chapters discussed include a review of public relations research in Africa, the role of the African CEO as a public relations activist, the use of social and digital media in public relations, the measurement and evaluation of communication programs, and the implications of the fourth industrial revolution on public relations practice in Africa. Providing important pathways and overviews of public relations management in

Africa, this volume not only highlights current practices but offers insights into the future of the practice within its evolving global landscape. **Artificial Intelligence and Deep Learning for Decision Makers** Jake L. Thomas
Dramatic shifts in our communication landscape have made it crucial for language teaching to go beyond print literacy and encompass the digital literacies which are increasingly central to learners' personal, social, educational and

professional lives. By situating these digital literacies within a clear theoretical framework, this book provides educators and students alike with not just the background for a deeper understanding of these key 21st-century skills, but also the rationale for integrating these skills into classroom practice. This is the first methodology book to address not just why but also how to teach digital literacies in the English language classroom. This book provides: A

theoretical framework through which to categorise and prioritise digital literacies Practical classroom activities to help learners and teachers develop digital literacies in tandem with key language skills A thorough analysis of the pedagogical implications of developing digital literacies in teaching practice A consideration of exactly how to integrate digital literacies into the English language syllabus Suggestions for teachers on how to continue their own

professional development through PLNs (Personal Learning Networks), and how to access teacher development opportunities online. This book is ideal for English language teachers, English language learners of all ages and levels, academics and researchers of all age groups and levels, academics and students researching digital literacies, and anyone looking to expand their understanding of digital literacies within a teaching framework.
