Managing Care: A Shared Responsibility John Wiley & Sons

Many individuals in their teens and twenties believe achieving financial self-sufficiency is an important part of becoming an adult (Arnett, 2000); yet the research on this topic is very limited. The level of general responsibility a young adult obtains is related to their general level of self-confidence (e.g., Shim, Serido, Bosch & Tang, 2013). However, the relationship between financial responsibility and self-confidence is currently unknown. Additionally, the relationship between self-confidence and annual income among young adults is largely unknown. This is the first study to advance current knowledge with a large (N = 474) and longitudinal dataset of emerging adults. The goal of this study is to test the underlying process that may explain variation of annual income among emerging adults from the Transition to Adulthood Supplement, a subset of the Panel Study of Income Dynamics (PSID). The study used a structural equation model (SEM) to test three waves of data across four years. Results from the SEM analysis demonstrated that higher levels of financial responsibility were associated with higher levels of self-confidence two years later. Additionally, the findings showed that higher levels of self-confidence were associated with higher levels of annual income after an additional two years. The results suggest the importance of building financial responsibility and self-confidence in emerging young adults.

Many US adults have difficulty managing their financial lives. Financial capability, the knowledge, skills, and access to resources to handle finances effectively, is essential to promoting financial well-being. However, the pathways to improve financial capability remain unclear. Traditional approaches, including financial education, counseling and coaching as well as safety net programs and safe, affordable financial services, are well explored by researchers. However, there are also non-traditional channels which have received less attention. In this dissertation, these approaches are examined, specifically learning by doing, learning from others, and behavioral interventions. First, the influence of repeated experiences in the financial market on financial capability is explored. Using a panel of US couples, the study reveals that relative income is a key determinant of financial responsibility in couples, and partners who defer responsibility are less likely to know their credit score. The second essay examines the effect of youth employment, an experience that may build financial capability, on financial well-being in young adulthood using several approaches to deal with selection into youth employment. Working in high school may provide youth with an opportunity to learn how to effectively manage their finances through experiences and information

sharing. The analysis reveals that those who work as youth are not more financial capable in young adulthood than their counterparts who were not employed. Finally, the third essay investigates the role of reminders for encouraging consumers to attend to information about their finances. This study uses a field experiment to test whether reminding credit union members that they have access to a free credit monitoring service motivates them to check their credit score and report. Despite the promise of this low-cost approach to improving accuracy of beliefs about creditworthiness, those who receive the message are no more likely to check their credit than a control group who receives no message. Overall, these essays contribute new evidence on the potential role of non-traditional pathways to financial capability that inform the design of programs and financial services that aim to better inform consumers and improve financial well-being. A roadmap for future research is offered.

As the first decade of the 21st century winds down we have seen a sea change in society's attitudes toward finance. The 1990s can best be described as the decade of shareholder supremacy, with each firm trying to outdo the other in their allegiance to shareholder value creation, or as it came to be known, Value-Based Management (VBM). No one seemed to question this culture as the rising firm valuations translated into vast wealth creation for so many. Three significant economic events have reshaped how the public feels about an unbridled devotion to VBM and have defined the last

decade: the dot.com bubble in 2000, the infamous accounting scandals of 2001, and the collapse of the credit markets in 2007-2008. In all three of these events the CEOs were portrayed as reckless and greedy and Wall Street went from an object of admiration to an object of scorn. The first edition of this book, Value Based Management: The Corporate Response to the Shareholder Revolution was written to help explain the underpinnings of Value-Based Management. At the time of its publication, few questioned whether the concept was the proper thing to do. Instead, the debate was focused on how to implement a VBM program. With this new second edition, the authors look at VBM after having seen it through good times and bad. It is not their intent to play the blame game or point fingers. Nor is it their intent to provide an impassioned defense of VBM. Instead they provide an academic appraisal of VBM, where it has been, where it is now, and where they see it going.

The authors take a detailed look at the economic competence and financial literacy of young adults, especially of those who start an apprenticeship or who take up their studies at a university. Economic competence and financial literacy are of special interest within this group, because these young people are - mostly for the first time in their lives - responsible for autonomously managing their own financial affairs and deal with economic challenges.

The purpose of this book is to study the association of corporate environmental responsibility (CER) with financial performance, capital structure, innovative activities, corporate risk, working capital management and accounting quality. Undoubtedly, CER has been developed into a crucial corporate issue around the world. CER has been incorporated within various sectors, countries and includes many types of activities and dimensions. A fundamental issue that is addressed in this book, is how corporate finance and accounting are affected by CER activities and how it impacts company performance. In order to analyse this interrelation, the authors focus on a sample of firms from 28 EU member countries. The purpose of this book is to study the association of CER with financial performance, capital structure, innovative activities, corporate risk, working capital management and accounting quality. The book also intends to provide useful policy recommendations as well as to offer constructive impulses for future research.
