The study of human body measurements on a comparative basis is known as anthropometrics. Its applicability to the design process is seen in the physical fit, or interface, between the human body and the various components of interior space. *Human Dimension and Interior Space* is the first major anthropometrically based reference book of design standards for use by all those involved with the physical planning and detailing of interiors, including interior designers, architects, furniture designers, builders, industrial designers, and students of design. The use of anthropometric data, although no substitute for good design or sound professional judgment should be viewed as one of the many tools required in the design process. This comprehensive overview of anthropometrics consists of three parts. The first part deals with the theory and application of anthropometrics and includes a special section dealing with physically disabled and elderly people. It provides the designer with the fundamentals of anthropometrics and a basic understanding of how interior design standards are established. The second part contains easy-to-read, illustrated anthropometric tables, which provide the most current data available on human body size, organized by age and percentile groupings. Also included is data relative to the range of joint motion and body sizes of children. The third part contains hundreds of dimensioned drawings, illustrating in plan and section the proper anthropometrically based relationship between user and space. The types of spaces range from residential and commercial to recreational and institutional, and all dimensions include metric conversions. In the Epilogue, the authors challenge the interior design profession, the building industry, and the furniture manufacturer to seriously explore the problem of adjustability in design. They expose the fallacy of designing to accommodate the so-called average man, who, in fact, does not exist. Using government data, including studies prepared by Dr. Howard Stoudt, Dr. Albert Damon, and Dr. Ross McFarland, formerly of the Harvard School of Public Health, and Jean Roberts of the U.S. Public Health Service, Panero and Zelnik have devised a system of interior design reference standards, easily understood through a series of charts and situation drawings. With *Human Dimension and Interior Space*, these standards are now accessible to all designers of interior environments.

Beginner's Guide to Screen Printing Search Press Limited

Although the technique of screen printing dates back to first-century China, it became the preferred printing method of choice for musical and political counterculture movements of the 1960s, thanks to its ease, cost, and flexibility. It moved into the mainstream with Andy Warhol's iconic screen print of Marilyn Monroe, and was quickly adopted by artists such as Roy Lichtenstein and Robert Rauschenberg. Screen printing has become even more widespread with the many demonstrations, marches, and grassroots protests in the wake of the American presidential election of 2016. *Screen Printing: The Ultimate Studio Guide* is a definitive, fully illustrated manual on the techniques, materials, and processes of screen printing. An essential and highly practical reference, this book is equally suited for beginning and experienced printers, with step-by-step tutorials on basic and advanced techniques, as well as "workshops" by several of the world's best-known screen printers, including Ben Eine and Bob Gill.

The international PURPLSOC (In Pursuit of Pattern Languages for Societal Change) platform aims to substantiate the relevance of Christopher Alexander's pattern language approach in all major domains by showing its broad applicability and richness and bringing best practice examples from outside the scientific community into research. This anthology of 19 papers, proceedings of the PURPLSOC 2015 World Conference held at Danube University Krems in Austria, is the first outcome of this discussion and reflection. The papers bring a manifold and broad overview of the current state of the implementation of Alexander's ideas in divergent fields. Additionally, PURPLSOC offers a platform for the research and discussion of Alexander's most recent work: "The Nature of Order: An Essay on the Art of Building and the Nature of the Universe" (2004). The four volumes explore the "living process" with its "15 structure-preserving transformations" applied in the "unfolding of wholeness".

Screen printing is a print process involving the forcing of ink through a screen of fine material to create a picture or pattern. It has been around for many years, and has long been perceived as a specialist subject accessible only to professional printers and textile artists due to the high cost of the screens and inks. Recently, however, screen printing has entered the mainstream and the equipment and tools have become more affordable and accessible. In this *Beginner's Guide to Screen Printing*, Erin Lacy shows you how to make your own screen using an embroidery hoop and silk fabric, and demonstrates how to create beautiful designs that are easy to achieve. Discover how to print onto different surfaces such as wood, cork and fabric, and create twelve stunning, coastal and botanical-themed projects through bright and colourful step-by-step photography. The book includes templates and inspiration on how to design your own screen printing motifs.
