Socially Just Practice in Groups: A Social Work Perspective comprehensively covers all aspects of group practice in social work settings, integrating a unique social justice framework throughout. Drawing from their experience as group work practitioners, authors Robert Ortega and Charles D. Garvin walk readers through the basics of group practice, including getting started, doing group work, establishing the purpose, roles and tasks of the group, stages and phases of practice, and specific skills in assessment, monitoring, and evaluation. THE UPDATED DEFINITIVE REFERENCE ON MEDICAL AND DENTAL OFFICE DESIGN *Medical and Dental*

Space Planning is an indispensable guide to the myriad of details that make a medical or dental practice efficient and productive. The unique needs of more than thirty specialties, as well as primary care, are explained in the context of new technology and the many regulatory and compliance issues influencing design. Concepts are also presented for ambulatory surgical centers, diagnostic imaging, clinical laboratories, breast care clinics, endoscopy centers, community health centers, radiation oncology, and single-specialty and multispecialty group practices and clinics. A thorough review of the latest dental technology and many creative space plans and design ideas for each dental specialty will be of interest to both dentists and design professionals. Important topics like infection control are top of mind, influencing every aspect of dental office design. An "inside look" at what goes on in each specialist's office will familiarize readers with medical and dental procedures, how they are executed, and the types of equipment used. Technology has radically impacted medical and dental practice: digital radiography, electronic health records, mobile health devices, point-of-care diagnostic testing, digital diagnostic instrumentation, CAD/CAM systems for

digital dental impressions and milling of restorations in the dentist's office, portable handheld X-ray, and 3D cone beam computed tomography for dentists all have major implications for facility design. The influence of the Affordable Care Act is transforming primary care from volume-based to value-based, which has an impact on the design of facilities, resulting in team collaboration spaces, larger consultative examination/assessment rooms, and accommodation for multidisciplinary practitioners who proactively manage patient care, often in a patient-centered medical home context. The wealth of information in this book is organized to make it easy to use and practical. Program tables accompany each medical and dental specialty to help the designer compute the number and sizes of required rooms and total square footage for each practice. This handy reference can be used during interviews for a "reality check" on a client's program or during space planning. Other features, for example, help untangle the web of compliance and code issues governing office-based surgery. Illustrated with more than 600 photographs and drawings, *Medical and Dental Space Planning* is an essential tool for interior designers and architects as well as dentists, physicians, and practice management consultants.

With changing regulations and economic pressures driving physicians towards medical practices, hospital alliances, and integrated health care organizations, negotiations skills have become a key component for a physician's professional and financial success. This book provides physicians with a coherent framework and proven strategies for successful negotiations. This practical, how-to guide is built around a core model of 'holistic negotiations', characterized by three main principles: (1) creating value for all parties involved; (2) preserving and building relationships, and (3) balancing short-term and long term gains. Long and short cases, anecdotes, and physician-specific examples illustrate and help readers apply the concepts and strategies that embody the holistic approach.

A Fateful Meeting A year and a half ago, I was sitting at a conference listening to Ed Noffsinger speak, and suddenly had the most profound "Aha" moment of my professional career. Here was someone presenting a practical and tested solution to some of the most challenging problems currently plaguing the US healthcare system, problems such as poor access to primary and specialty care; the uncontrollable and rising costs of healthcare; our nation's relatively poor quality outcomes; and finally, the sense of frustration, disempowerment, loneliness, and disenfranchisement that patients and their families too often experience. Dr. Noffsinger's solution seemed deceptively simple—shared medical appointments (SMAs) that afford the highest quality healthcare to be delivered in the highest quality care experience—a group setting. Experience collected over a decade and involving more than 100,000 patient visits throughout the United States, Canada, and parts of Europe has demonstrated that SMAs, when used in primary care as well as in the medical and surgical subspecialties, lead to increased access to care, enhanced quality of care, and improved patient satisfaction. For physicians, the efficiency gains and team support from their participation in SMAs translate into much needed relief and improved career satisfaction.

Collaborations of physicians and researchers with industry can provide valuable benefits to society, particularly in the translation of basic scientific discoveries to new therapies and products. Recent reports and news stories have, however, documented disturbing examples of relationships and practices that put at risk the integrity of medical research, the objectivity of professional education, the quality of patient care, the soundness of clinical practice guidelines, and the public's trust in medicine. *Conflict of Interest in Medical Research, Education, and Practice* provides a comprehensive look at conflict of interest in medicine. It offers principles to inform the design of policies to identify, limit, and manage conflicts of interest without damaging constructive collaboration with industry. It calls for both short-term actions and long-term commitments by institutions and individuals, including leaders of academic medical centers, professional societies, patient advocacy groups, government agencies, and drug, device, and pharmaceutical companies. Failure of the medical community to take convincing action on conflicts of interest invites additional legislative or regulatory measures that may be overly broad or unduly burdensome. *Conflict of Interest in Medical Research, Education, and Practice* makes several recommendations for strengthening conflict of interest policies and curbing relationships that create risks with little benefit. The book will serve as an invaluable resource for individuals and organizations committed to high ethical standards in all realms of medicine.

Does a prepaid group practice deliver less outpatient mental health care than fee-for-service when they both serve comparable populations? to answer this question the authors used data from a randomized controlled trial which assigned families into a prepaid group practice and into fee-for-service insurance plans. The pattern of outpatient mental health care differs for those enrolled at the prepaid group practice and those enrolled in the fee for service. This type provides more expensive and more intensive therapy per user. The enrollees are 50% more likely to see a mental health

specialist at least once over a three years period when they depend of the prepaid group. This difference is due to a higher rate of "turnover" of patients in this type of plan.

Leading art therapy groups is often a challenge, but as Bruce Moon so eloquently describes in this new second edition, making art in the context of others is an incredibly and almost inexplicably powerful experience. By placing the art at the center of practice, Art-Based Group Therapy creates an explanatory model and rationale for group practice that is rooted in art therapy theory and identity. There are four primary goals discussed in this text. First, an overview of essential therapeutic elements of art-based group work is provided. Second, a number of case vignettes that illustrate how therapeutic elements are enacted in practice are presented. Third, the author clearly differentiates art-based group therapy theory from traditional group psychotherapy theory. Fourth, the aspects of art-based group work and their advantages unique to art therapy are explored. Art-based group processes can be used to enhance participants' sense of community and augment educational endeavors, promote wellness, prevent emotional difficulties, and treat psychological behavioral problems. Artistic activity is used in art-based groups processes to: (1) create self-expression and to recognize the things group members have in common with one another; (2) develop awareness of the universal aspects of their difficulties as a means to identify and resolve interpersonal conflicts; (3) increase self-worth and alter self-concepts; (4) respond to others and express compassion for one another; and (5) clarify feelings and values. Through the author's effective use of storytelling, the reader encounters the group art therapy experience, transcending the case vignette and didactic instruction. Art-based group therapy can help group members achieve nearly any desired outcome, and/or address a wide range of therapeutic objectives. The book will be of benefit to students, practitioners, and educators alike. Using it as a guide, art therapy students may be more empowered to enter into the uncertain terrains of their practice grounded in a theory soundly based in their area of study. Practitioners will no doubt be encouraged, validated, and inspired to continue their work. The author succeeds in establishing a framework that allows art therapists to communicate the value of their work in a language that is unique to art therapy.

The advanced technologies being used in diagnosis and care within modern medicine, whilst supporting and making medical practices possible, may also conflict with established traditions of medicine and care. What happens to the patient in a technologized medical environment? How are doctors', nurses' and medical scientists' practices changed when artefacts are involved? How is knowledge negotiated, or relations of power reconfigured? *Technology and Medical Practice* addresses these developments and dilemmas, focusing on various practices with technologies within hospitals and sociotechnical systems of care. Combining science and technology studies with medical sociology, the history of medicine and feminist approaches to science, this book presents analyses of artefacts-in-use across a variety of settings within the UK, USA and Europe, and will appeal to sociologists, anthropologists and scholars of science and technology alike.
