How Audiences Decide CRC Press
 Musical Excellence offers performers, teachers, and researchers, new perspectives and practical guidance for enhancing performance and managing the stress that typically accompanies performance situations. It draws together, for the first time in a single collection, the findings of pioneering initiatives from across the arts and sciences. Specific recommendations are provided alongside comprehensive reviews of existing theory and research, enabling the practitioner to place the strategies and techniques within the broader context of human performance and encouraging novel ways of conceptualizing music making and teaching. Part I, Prospects and Limits, sets

out ground rules for achieving musical excellence. What roles do innate talent, environmental influences, and sheer hard work play in attaining eminence? How can musicians best manage the physical demands of a profession that is intrinsically arduous, throughout a career that can literally span a lifetime? How can performers, teachers, and researchers effectively assess and reflect on performance enhancement for themselves, their colleagues, and their students? Part II, Practice Strategies, presents approaches for increasing the effectiveness and efficiency of practice. These are examined generally for the individual and ensembles and specifically for the tasks of memorizing, sight-reading, and improvising music. Musicians spend vast amounts of time and energy acquiring and refining their skills, but are there particular rehearsal strategies that

they can employ to produce better performance results or to achieve the same results more quickly? What implication does existing knowledge of human information processing and physical functioning have for musical learning and practice? Part III, Techniques and Interventions, introduces scientifically validated methods for enhancing musical achievement, ordered from the more physical to the psychological to the pharmacological; however, they all address issues of both mental and physical significance for the musician. Collectively, they stand as clear evidence that applied, cross-disciplinary research can facilitate musicians' strive for performance excellence. Throughout, the book highlights ways for musicians to make the most of their existing practice, training, and experience and gives them additional tools for acquiring and developing new

skills. Each chapter is underpinned by physical and psychological principles relevant to all performance traditions that demand dedication and resilience, unique artistic vision, and effective communication.

This set of original articles probes the breadth of vital issues surrounding the impact of war and violence on women globally—and examines what is being done to mitigate their effects. The story of men's roles in war and violence fills headlines and history books, but the women's narrative too often goes unnoticed. This two-volume work brings women's voices to the fore, highlighting new scholarship and journalism to offer a realistic understanding of this timely topic. Including both historical context and contemporary issues, the volumes explore types of violence affecting women and girls—as victims of war and as combatants in and perpetrators of war. Equally important, it provides an in-depth look at resistance movements and peacemaking efforts, examining how these issues can—and should—be addressed. The two volumes bring together a wide range of articles by experts from various fields and backgrounds to provide the first all-inclusive overview of women, war, and violence. Other works on the subject tend to be focused on Western nations, offering a narrow view of a global issue. This compendium, in contrast, takes a truly international approach. It provides general readers, policymakers, students and scholars with a compelling collection of insights from around the world, exposing the varied experiences women have had—and continue to have—with violence and war.

How Audiences Decide: A Cognitive Approach to Business Communication is a comprehensive introduction to persuasive communication in the context of business. It summarizes relevant theories and findings from the fields of cognitive science, social cognition, leadership, team cognition, psycholinguistics, and behavioral economics. By illuminating the thought processes of many different audiences, from consumers to Wall Street analysts to CEOs, it helps communicators better understand why audiences make

the decisions they make and how to influence them. The book covers a broad range of communication techniques—including those concerning persuasive speaking and writing, interviews and group meetings, content and style, typography and nonverbal behaviors, charts and images, rational arguments and emotional appeals—and examines the empirical evidence supporting each of them.

ICICKM2008- 5th International Conference on Intellectual Capital, Knowledge Management and Organisational Learning Martinus Nijhoff Publishers

The core assumption of this book is the interconnectedness of humans and nature, and that the future of the planet depends on humans' recognition and care for this interconnectedness. This comprehensive resource supports the work of pre-service and practicing elementary teachers as they teach their students to be part of the world as engaged citizens, advocates for social and ecological justice. Challenging readers to more explicitly address current environmental issues with students in their classrooms, the book presents a diverse set of topics from a variety of perspectives. Its broad social/cultural perspective emphasizes that social and ecological justice are interrelated. Coverage includes descriptions of environmental education pedagogies such as nature-based experiences and place-based studies; peace-education practices; children doing environmental activism; and teachers supporting children emotionally in times of climate disruption and tumult. The pedagogies described invite student engagement and action in the public sphere. Children are represented as 'agents of change' engaged in social and environmental issues and problems through their actions both local and global.

Social change has placed new demands on the practice of medicine, altering almost every aspect of patient care relationships. Just as medicine was encouraged to embrace the biological sciences some 100 years ago, recent directives indicate the importance of the social sciences in understanding biomedical practice. Humanistic challenges call for changes in curative and technological imperatives. In this book, social scientists contribute to such challenges by using social evidence to indicate appropriate new goals for health care in a changing environment. This book was designed to stimulate and

challenge all those concerned with the human interactions that constitute medical practice. To encompass a wide range of topics, the authors include researchers; practicing physicians from the specialties of family, general, geriatric, pediatric, and oncological medicine; social and behavioral scientists; and public health representatives. Cutting across disciplinary boundaries, they explore the ethical, economic, and social aspects of patient care. These essays draw on past studies of the patient-doctor relationship and generate new and important questions. They address social behavior in patient care as a way to approach theoretical issues pertinent to the social and medical sciences. The authors also use social variables to study patient care and suggest new areas of sociomedical inquiry and new approaches to medical practice, education, and research. Its cross-disciplinary approach and jargon-free writing make this book an important and accessible tool for physician, scholar, and student.

Sociomedical Perspectives on Patient Care IGI Global

This book examines issues of identity; positionality; community; value and relevance, to explore where transnational higher education is headed and what form it may take moving forwards.

Transnational higher education has traditionally been viewed through the lens of access. Now, the authors argue, higher education must think more closely about impact and legacy as changing patterns of student recruitment, reduced options for mobility and the need to establish value for money will be at the heart of the next stage of evolution. Drawing on international case studies from Europe, the Middle East and Central Asia, the book outlines the past, present and future of higher education working across national boundaries, and the extent to which this represents the globalisation of the university sector. The book opens with an analysis of the role of the university in both local and global contexts, moving on to explore policy and collaboration and then looking at emerging trends and activity in international higher education. The final section draws directly from students, to give their perspective and understanding of the core themes throughout the book. This volume will have a wide readership amongst higher education scholars, undergraduate and postgraduate students and policy makers. *Current Catalog* Psychology Press
Because of a management model emphasizing standardization and a one-size-fits-all approach, the previous good

health of firms depended on economic performance and maximizing shareholder value. The enduring financial crisis and the ensuing leadership void have forced us all to reconsider the rules of the game and to take into account economic and social factors, in order to address the needs of an unpredictable world. In *Uncertainty, Diversity and The Common Good*, contributors from leading academic institutions around the World discuss different models of socially responsible global leadership. Their perspectives embrace philosophy; sociology; psychology; ecological and environmental economics; management; and entrepreneurship. Together they explore unpredictability and how being responsible for social as well as economic outcomes requires intelligences that enable managers to adapt and to develop a sustainable, lasting and consistent managerial approach. Working with local communities, integrating minorities, and redistributing wealth, they say, requires a new model of socially responsible leadership that brings together dimensions that are incompatible within existing paradigms. This book indicates what new paradigms might look like, with particular regard to the issue of diversity as an asset with which to confront uncertainty. Case studies tell of leaders working with diversity to create social change and new visions of leadership that are impacting social and cultural norms. This leads to discussion of the nature and diversity of leadership itself which will be helpful to academic researchers and higher level students, as well as policy makers and practitioners.

Open Space: People Space Routledge
This handbook provides a global study of the classification of mixed race and ethnicity at the state level, bringing together a diverse range of country case studies from around the world. The classification of race and ethnicity by the state is a common way to organize and make sense of populations in many countries, from the national census and birth and death records, to identity cards and household surveys. As populations have grown, diversified, and become increasingly transnational and mobile, single and mutually exclusive categories struggle to adequately capture the complexity of identities and heritages in multicultural societies. State motivations for classification vary widely, and have shifted over time, ranging from subjugation and exclusion to remediation and addressing inequalities. The chapters in this handbook illustrate how differing histories and contemporary realities have

led states to count and classify mixedness in different ways, for different reasons. This collection will serve as a key reference point on the international classification of mixed race and ethnicity for students and scholars across sociology, ethnic and racial studies, and public policy, as well as policy makers and practitioners.

Interventions, Training, and Technologies for Improved Police Well-Being and Performance When Therapists Cry
The need for evidence-based practice to enhance current and future police training and assessment has never been greater. This need focuses on the procedures and findings of research within the field of police work along with the philosophy guiding these research approaches and commentaries on the methods being used. With many future directions for the science of police training and assessment, the focus on new training techniques and technologies for improving performance is of the utmost importance to find the best current, evidence-based practices for policing. In addition to these practices, understanding the practical realities and challenges of implementing cutting-edge procedures is essential in gaining a holistic view on police well-being and performance. *Interventions, Training, and Technologies for Improved Police Well-Being and Performance* is a critical publication that explores new training methods and technologies. The future of policing is poised to change, making the need for developments in evidence-based practices more important than ever before. New technology and techniques for improving performance and the perception of the police force can guide the policies and practices of law enforcement, trainers and academies, government officials, policymakers, psychologists, psychiatrists, therapists, to a more effective implementation of training and procedures. Including the perspective of police officers within the publication, this text offers insight into an often neglected viewpoint when creating training and policies. This text is also be beneficial for researchers, academicians, and students interested in the new training techniques, technologies, and interventions for police

performance and well-being.

Culture and Leadership Across the World: The GLOBE Book of In-Depth Studies of 25 Societies is the second major publication of GLOBE (Global Leadership and Organizational Behavior Effectiveness), a groundbreaking, large-scale project on international management research featuring contributions from nearly 18,000 middle managers from 1,000 organizations in 62 countries, perhaps the largest project of its kind ever undertaken. This volume effectively presents a complex collection of global research addressing the culture of particular countries, leadership qualities within those countries, and recommendations on how managers should conduct business in countries other than their own. A massive effort with a cross-cultural focus and broad international appeal, this book explores: how leadership is conceptualized and enacted in its cultural milieu; quantitative data including middle manager questionnaires, unobtrusive measurement, and participant observation data; qualitative research from interviews, focus groups, and media analyses; and theoretical and methodological pitfalls that arise in the effort to develop universal management theories. This book is a coherent and well-organized presentation of the findings of the GLOBE Project and will appeal to scholars in leadership, management, international business, cultural studies; and also to practicing managers.

The global construction sector is infamous for high levels of injuries, accidents and fatalities, and poor health and well-being of its workforce. While this record appears in both developed and developing countries, the situation is worse in developing countries, where major spending on infrastructure development is expected. There is an urgent need to improve construction health and safety (H&S) in developing countries. The improvement calls for the development of context-specific solutions underpinned by research into challenges and related solutions. This edited volume advances the current understanding of construction H&S in developing countries by revealing context-specific issues and challenges that have hitherto not been well explored in the literature, and applying emergent H&S management approaches and practices in developing countries. Coverage includes countries from the regions of sub-Saharan Africa, Latin America, Asia and Europe.

This book, which is the first compendium of research into construction H&S issues in developing countries, adds considerable insight into the field and presents innovative solutions to help address poor H&S in construction in developing nations. It is a must read for all construction professionals, researchers and practitioners interested in construction and occupational H&S, safety management, engineering management and development studies.

When Therapists Cry Taylor & Francis
Research in Education Taylor & Francis
The close supervision of adolescents dramatically reduces the incidence of risky sexual behavior, drug and alcohol use, and other activities that could negatively affect one's health and well-being. Because of the strong correlation between parental monitoring and a child's welfare, social workers, psychologists, child development specialists, and other professionals who work with children now incorporate monitoring into their programs and practice. A definitive resource providing the best research and techniques for productive supervision within the home, this volume defines and develops the conceptual, methodological, and practical areas of parental monitoring and monitoring research, locating the right balance of closeness and supervision while also remaining sensitive to ethnic and socioeconomic backgrounds. Assembled by leading experts on childrearing and healthy parent-child communication, *Parental Monitoring of Adolescents* identifies the conditions that best facilitate parental knowledge, ideal interventions for high-risk youth, and the factors that either help or hinder the monitoring of an adolescent's world. The volume also sets a course for future research, establishing a new framework that evaluates the nature and approach of monitoring within the parent-adolescent relationship and the particular social realities of everyday life.

Employee sustainability and well-being have been increasingly important discussions in today's business world. Businesses may have difficulty implementing a successful long-term policy due to a lack of knowledge, limited resources, and a short-term focus; however, the effects have shown a potential strategic and growth advantage. Promoting employee sustainability is an important step towards greater competitive advantage, creation of added value to the business, and a greater

identity among society and within the organization itself. *Developing Diversity, Equity, and Inclusion Policies for Promoting Employee Sustainability and Well-Being* analyzes the current state of employee sustainability policies, systematizes the factors that promote a more sustainable and healthier workplace, explores the implications of diversity and inclusion practices on the well-being of employees, and collects policy options aimed at finding solutions to enhance well-being. Covering topics such as emotional health, organizational behavior, and work satisfaction, this reference work is ideal for academicians, researchers, scholars, practitioners, policymakers, business owners, managers, government officials, instructors, and students.

This updated and expanded edition of *Persuasive Communication* offers a comprehensive introduction to persuasion and real-world decision making. Drawing on empirical research from social psychology, neuroscience, business communication research, cognitive science, and behavioral economics, Young reveals the thought processes of many different audiences—from investors to CEOs—to help students better understand why audiences make the decisions they make and how to influence them. The book covers a broad range of communication techniques, richly illustrated with compelling examples, including resumes, speeches, and slide presentations, to help students recognize persuasive methods that do, and do not, work. A detailed analysis of the emotions and biases that go into decision making arms students with perceptive insights into human behavior and helps them apply this understanding with various decision-making aids. Students will learn how to impact potential employers, clients, and other audiences essential to their success. This book will prove fascinating to many, and especially useful for students of persuasion, rhetoric, and business communication.

The concept of compensation in psychology refers to processes through which a gap or mismatch between current accessible skills and environmental demands is reduced or closed. These gaps can be principally the result of losses, such as those associated with aging or interpersonal role changes; injuries, such as those that may occur to the neurological or sensory systems; organic

or functional diseases, such as the dementias or schizophrenia; and congenital deficits, such as those apparent in autism or some learning disabilities. Whether the demand-skill gaps can be bridged completely, reduced only moderately, or are impossible to close, depends on a variety of factors. In every case, however, the guiding notions of compensation are that: * some such deficits may be amendable, * the continuation of the effects of the gap may be avoidable, and * some functioning may be recoverable. In this sense, compensation is related to adaptation; it is about overcoming deficits, managing the effects of losses, and promoting improvement in psychological functioning. Compensation is a concept that has a long and rich history in numerous domains of psychological research and practice. To date, however, few of the relevant research domains have benefitted explicitly or optimally from considering alternative perspectives on the concept of compensation. Although researchers and practitioners in several areas of psychology have actively pursued programs with compensation as a central concept, communication across disciplinary divides has been lacking. Comparing and contrasting the uses and implications of the concept across neighboring (and even not-so-adjacent) areas of psychology can promote advances in both theoretical and practical pursuits. The goal of this book is to carry inchoate integrative efforts to a new level of clarity. To this end, the editors have recruited major authors from selected principal areas of research and practice in psychological compensation. The authors review the current state of compensation scholarship in their domains of specialization. State-of-the-art reviews of this rapidly expanding area of scholarship are, therefore, collected under one cover for the first time. In this way, a wide variety of readers who might otherwise rarely cross professional paths with one another, can quickly learn about alternative preferences, agendas and methods, as well as novel research results, interpretations, and practical applications. Designed to contain broad, deep, and current perspectives on compensation, this volume continues the processes of: * explicating the concept of compensation; * linking and distinguishing compensation from neighboring concepts; * describing the variety of compensatory mechanisms operating in a wide range of phenomena; and * illustrating how compensatory mechanisms can be harnessed or trained to manage losses or deficits and to

promote gains or at least maintenance of functioning.

This volume contains chapters derived from a N. A. T. O. Advanced Study Institute held in June 1983. As the director of this A. S. I. it was my hope that some of the electrophysiologists could express the potentialities of their work for perceptual theory, and that some perceptionists could speculate on the underlying "units" of perception in a way that would engage the imagination of physiologists. The reader will have to be the judge of whether this was achieved, or whether such a psychophysiological interlingua is still overly idealistic. It is clear that after the revolution precipitated by Hubel and Weisel in understanding of visual cortical neurons we still have only a foggy idea of the behavioral output of any particular

species of cortical detector. It was therefore particularly unfortunate that two persons who have made great strides in correlating interesting facets of cat cortical physiology with human psychophysics (Max Cynader and Martin Regan of Dalhousie University) were unable to attend this meeting. Nevertheless, a number of new and challenging ideas regarding both spatial perception and cortical mechanisms are represented in this volume, and it is hoped that the reader will remember not only the individual demonstrations but the critical questions posed by the apposition of the two different collections of experimental facts. We are constantly forming impressions about those around us. Social interaction

depends on our understanding of interpersonal behavior - assessing one another's personality, emotions, thoughts and feelings, attitudes, deceptiveness, group memberships, and other personal characteristics through facial expressions, body language, voice and spoken language. But how accurate are our impressions and when does such accuracy matter? How is accuracy achieved and are some of us more successful at achieving it than others? This comprehensive overview presents cutting-edge research on this fast-expanding field and will be essential reading for anyone interested in the psychology of interpersonal perception. A wide range of experts in the field explore topics including age and gender effects, psychopathology, culture and ethnicity, workplaces and leadership, clinicians' skills, empathy, meta-perception, and training people to be more accurate in their perceptions of others.
