Marketing on a Shoestring Budget Columbia University Press

This book discusses recent technologies and case studies that aim to enhance positioning obtained with commercial smartphones in urban environments, overcoming difficulties with GPS. The authors provide insight into recent trends and innovation on technologies, solutions and approaches to overcome GPS issues in urban environments, due to the existence of a big number of buildings. Topics include security and legal aspects related to positioning systems, the usage of crowdsourcing approaches to enhance positioning, location-based services, proximity based-social networking, satellite navigation and Bluetooth low-energy based systems. The book provides important information for developers that intend to make use of precise positioning for the purpose of commercial applications as well as for research and innovation. Discusses technologies that enhance positioning obtained with commercial smartphones in urban environments; Presents innovations to overcome GPS issues in urban environments caused by dense cities; Includes applications of precise positioning, including their security issues and challenges.

Digital Analytics for Marketing IGI Global

An original methodological framework for approaching the archived web, both as a source and as an object of study in its own right. As life continues to move online, the web becomes increasingly important as a source for understanding the past. But historians have yet to formulate a methodology for approaching the archived web as a source of study. How should the history of the present be written? In this book, Niels Brügger offers an original methodological framework for approaching the web of the past, both as a source and as an object of study in its own right. While many studies of the web focus solely on its use and users, Brügger approaches the archived web as a semiotic, textual system in order to offer the first book-length treatment of its scholarly use. While the various forms of the archived web can challenge researchers' interactions with it, they also present a range of possibilities for interpretation. The Archived Web identifies characteristics of the online web that are significant now for scholars, investigates how the online web became the archived web, and explores how the particular digitality of the archived web can affect a historian's research process. Brügger offers suggestions for how to translate traditional historiographic methods for the study of the archived web, focusing on provenance, creating an overview of the archived material, evaluating versions, and citing the material. The Archived Web lays the foundations for doing web history in the digital age, offering important and timely guidance for today's media scholars and tomorrow's historians.

Analyzing and Securing Social Networks "O'Reilly Media, Inc."

In recent years, there has been a rapid growth of location-based social networking services, such as Foursquare and Facebook Places, which have attracted an increasing number of users and greatly enriched their urban experience. Typical location-based social networking sites allow a user to "check in" at a real-world POI (point of interest, e.g., a hotel, restaurant, theater, etc.), leave tips

toward the POI, and share the check-in with their online friends. The check-in action bridges the gap between real world and online social networks, resulting in a new type of social networks, namely location-based social networks (LBSNs). Compared to traditional GPS data, location-based social networks data contains unique properties with abundant heterogeneous information to reveal human mobility, i.e., "when and where a user (who) has been to for what," corresponding to an unprecedented opportunity to better understand human mobility from spatial, temporal, social, and content aspects. The mining and understanding of human mobility can further lead to effective approaches to improve current location-based services from mobile marketing to recommender systems, providing users more convenient life experience than before. This book takes a data mining perspective to offer an overview of studying human mobility in location-based social networks and illuminate a wide range of related computational tasks. It introduces basic concepts, elaborates associated challenges, reviews state-of-the-art algorithms with illustrative examples and real-world LBSN datasets, and discusses effective evaluation methods in mining human mobility. In particular, we illustrate unique characteristics and research opportunities of LBSN data, present representative tasks of mining human mobility on location-based social networks, including capturing user mobility patterns to understand when and where a user commonly goes (location prediction), and exploiting user preferences and location profiles to investigate where and when a user wants to explore (location recommendation), along with studying a user's check-in activity in terms of why a user goes to a certain location.

Analyzing and Securing Social Networks focuses on the two major technologies that have been developed for online social networks (OSNs): (i) data mining technologies for analyzing these networks and extracting useful information such as location, demographics, and sentiments of the participants of the network, and (ii) security and privacy technologies that ensure the privacy of the participants of the network as well as provide controlled access to the information posted and exchanged by the participants. The authors explore security and privacy issues for social media systems, analyze such systems, and discuss prototypes they have developed for social media systems whose data are represented using semantic web technologies. These experimental systems have been developed at The University of Texas at Dallas. The material in this book, together with the numerous references listed in each chapter, have been used for a graduate-level course at The University of Texas at Dallas on analyzing and securing social media. Several experimental systems developed by graduate students are also provided. The book is divided into nine main sections: (1) supporting technologies, (2) basics of analyzing and securing social networks, (3) the authors' design and implementation of various social network analytics tools, (4) privacy aspects of social networks, (5) access control and inference control for social networks, (6) experimental systems designed or developed by the authors on analyzing and securing social networks, (7) social media application systems developed by the authors, (8) secure social media systems developed by the authors, and (9) some of the authors' exploratory work and further directions.

Journalism permeates our lives and shapes our thoughts in ways that we have long taken for granted. Whether it is National Public Radio in the morning or the lead story on the Today show, the morning newspaper headlines, up-to-the-minute Internet news, grocery store tabloids, Time magazine in our mailbox, or the nightly news on television, journalism pervades our lives. The *Encyclopedia of Journalism* covers all significant dimensions of journalism, such as print, broadcast, and Internet journalism; U.S. and international perspectives; and history, technology, legal issues and court cases, ownership, and economics. The encyclopedia will consist of approximately 500 signed entries from scholars, experts, and journalists, under the direction of lead editor Gregory

Borchard of University of Nevada, Las Vegas.

Socio-Technical Aspects in Security SAGE Publications

"This book brings together research on the multi-faceted nature and overarching impact of social technologies on the main opportunities and challenges facing today's post-secondary classrooms, from issues of social capital formation to student support and recruitment"--

Precision Positioning with Commercial Smartphones in Urban Environments SAGE Publications

This book explores total information awareness empowered by social media. At the FBI Citizens Academy in February 2021, I asked the FBI about the January 6 Capitol riot organized on social media that led to the unprecedented ban of a sitting U.S. President by all major social networks. In March 2021, Facebook CEO Mark Zuckerberg, Google CEO Sundar Pichai, and Twitter CEO Jack Dorsey appeared before Congress to face criticism about their handling of misinformation and online extremism that culminated in the storming of Capitol Hill. With more than three billion monthly active users, Facebook family of apps is by far the world's largest social network. Facebook as a nation is bigger than the top three most populous countries in the world: China, India, and the United States. Social media has enabled its users to inform and misinform the public, to appease and disrupt Wall Street, to mitigate and exacerbate the COVID-19 pandemic, and to unite and divide a country. Mark Zuckerberg once said, "We exist at the intersection of technology and social issues." He should have heeded his own words. In October 2021, former Facebook manager-turned-whistleblower Frances Haugen testified at the U.S. Senate that Facebook's products "harm children, stoke division, and weaken our democracy." This book offers discourse and practical advice on information and misinformation, cybersecurity and privacy issues, cryptocurrency and business intelligence, social media marketing and caveats, e-government and e-activism, as well as the pros and cons of total information awareness including the Edward Snowden leaks. "Highly recommended." - T. D. Richardson, Choice Magazine "A great book for social media experts." - Will M., AdWeek "Parents in particular would be well advised to make this book compulsory reading for their teenage children..." - David B. Henderson, ACM Computing Reviews

Ethics of Big Data Routledge

This handbook provides a systematic overview of the present state of international research in digital public history. Individual studies by internationally renowned public historians, digital humanists, and digital historians elucidate central issues in the field and present a critical account of the major public history accomplishments, research activities, and practices with the public and of their digital context. The handbook applies an international and comparative approach, looks at the historical development of the field, focuses on technical background and the use of specific digital media and tools. Furthermore, the handbook analyzes connections with local communities and different publics worldwide when engaging in digital activities with the past, indicating directions for future research, and teaching activities.

Metal Detecting is Easy Finding New Places that are Old & Forgotten is the Tricky Part... If we all had a Treasure Map then this would be too easy and there would be no buried Treasure left to go out and find. My guide will help you create your own real treasure map. I quickly learned about 6 months

after I started metal detecting that I need to do something different. I have hunted the beaches, hunted all kinds of parks and every school yard within 30 miles, I want to hunt something different. I wanted to hunt something really old; I want to hunt somewhere that would give me the chance to find something worth bragging about on all the Social Media outlets. I wanted to find relics that have a story. I was so tired of reading and seeing all the pictures on Facebook and other social media outlets about these great finds from the 1800's or even older, why can't I dig up something like what other people seem to be finding? So I started researching about old places and the history right here in my own zip code, I was shocked at what I was quickly learning about my own city. I couldn't believe how much history had taken place within a few miles from my own front porch. Even though I grew up here, I must have forgotten about all the land marks that I have passed by over the last 40 years, tunnel vision as most would call it. So after finding all kinds of new hunting places, I did what anyone else would do these days, I created a group page on Facebook and I started posting information and the pictures of all the new locations I had found to go out and hunt. Next thing I know, I have over 600 followers. Then people started posting request for me to help find Old & Forgotten places where they lived. I started posting those new places for them to go out and hunt. Then I started to get even more request on a daily basis. A lot of the new requests were coming in as a private message asking me if I "would not post the info I had found publicly". We Treasure Hunters DO NOT like to share information about a great location; hmmm seems when we do share a location, everyone shows up with a Metal Detector looking for buried Treasure. After getting more request then I could get to on a daily bases, someone had asked me if I had an eBook or any kind of Instructable guide, which could show them how to Research and Locate Old and Forgotten Places. What a Great Idea... So here is my complete step by step guide on how to research online, using several FREE interactive tools and websites available to anyone. I would also like to add, there is nothing to sign up for or purchase with the websites and online resources I use. By following my Guide, I explain in great detail how to use each of these FREE tools available. When you use these tools in conjunction with each other, you will see that you have a complete arsenal of information that will help anyone locate new hunting places quickly. Let the hunt begin...

[The New Digital Storytelling](#) Rob Mustin

The bestselling author and creator of the hit Netflix drama *The Stranger* explores the dangers of obsession in this #1 New York Times bestselling masterpiece of modern suspense. Six years have passed since Jake Fisher watched Natalie, the love of his life, marry another man. Six years of hiding a broken heart by throwing himself into his career as a college professor. Six years of keeping his promise to leave Natalie alone, and six years of tortured dreams of her life with her new husband, Todd. But six years haven't come close to extinguishing his feelings, and when Jake comes across Todd's obituary, he can't keep himself away from the funeral. There he gets the glimpse of Todd's wife he's hoping for...but she is not Natalie. As Jake searches for the truth, his picture-perfect

memories of Natalie begin to unravel. Mutual friends of the couple either can't be found, or don't remember Jake. No one has seen Natalie in years. And soon, Jake's search for the woman who broke his heart puts his very life at risk as he uncovers the secrets and lies that love can hide....

[Using Social Media to Build Library Communities](#) Morgan & Claypool Publishers

Posthuman Capitalism critically reviews the manifestation of capitalist agenda online by examining the phenomenon of the 'posthuman' in the data economy. The chapters examine our posthuman condition, where we are constantly asked to partake in platforms which perform to capitalist agenda while socializing us into new platforms of living, consuming and interacting online. Labelling these modes of our experiential extractions, transactions and re-making of our mortal lives as posthuman capitalism, the book reviews the human entanglements from sociality, friendship, desire, memory, transgressions of privacy and co-production of value through the data economy. Offering innovative and interdisciplinary conceptualisations and vantage points on our contemporary data society, this book will be a key text for scholars and students in the areas of digital media, communication studies, sociology, philosophy and social psychology.

A-level Geography Topic Master: Changing Places Springer Nature

Bringing together scholars, public intellectuals, and activists from across the field of education, the *Handbook of Public Pedagogy* explores and maps the terrain of this burgeoning field. For the first time in one comprehensive volume, readers will be able to learn about the history and scope of the concept and practices of public pedagogy. What is 'public pedagogy'? What theories, research, aims, and values inform it? What does it look like in practice? Offering a wide range of differing, even diverging, perspectives on how the 'public' might operate as a pedagogical agent, this *Handbook* provides new ways of understanding educational practice, both within and without schools. It implores teachers, researchers, and theorists to reconsider their foundational understanding of what counts as pedagogy and of how and where the process of education occurs. The questions it raises and the critical analyses they require provide curriculum and educational workers and scholars at large with new ways of understanding educational practice, both within and without schools.
