This book moves away from the common belief that Japan's international relations are firmly the preserve of the national government in Japan's highly centralised political system. Examining examples of subnational governments (SNGs) across Japan the book uncovers a significant and generally unrecognised development in Japanese politics: SNGs are ever more dynamic international actors as national borders 'weaken' across the world. Exploring what Japanese SNGs do, where they do it, and why, the book considers the implications of these factors for Japan's international relations and domestic politics. By bringing to light the scope and consequences of the international actions of Japan's SNGs, this book provides a more accurate and nuanced understanding of the country's foreign policy, at a time when it is pursuing a broader and more active profile in international affairs.

This volume is an indispensable addition to the multidisciplinary coverage of the science of the Mediterranean Sea. The editors have gathered leading authorities from the fields of Marine Biology, Ecology, paleoclimatology, Chemical and Physical Oceanography, Zoology, Botany, Aquatic Photosynthesis, Socioeconomics, Mariculture, Mediterranean History and Science of Humanity. Beginning with the birth of the Mediterranean Sea and

its myths. From coral to fish, an introduction is given to its major inhabitants of plants and animals past and present. The chapters illustrate how organisms interact as part of the structure and function of the Sea's main ecosystems. The rise of the Mediterranean as the cradle of the Western Civilization leads to a discourse on the status of human interaction with the sea. Accelerating global climate change, water warming, ocean acidification and sea level rise, and analyses of their effects on key organisms, entire ecosystems and human socioeconomics are given. Forecasting and predictions are presented taking into account different future scenarios from the IPCC (International Panel on Climate Change). The volume is richly illustrated in color, with an extensive bibliography. A valuable addition to the limited literature in the field, offering up-to-date broad coverage merging science and humanities.

The caddies of the Augusta National Golf Club are some of the game's most colorful characters. Their stories are intertwined with one of the world's most respected private clubs, its elite membership, and golf's greatest champions. The caddies witnessed every great moment, both private and public, at Augusta National, from Gene Sarazen's 'shot heard 'round the world' to Nicklaus's winning a record six Masters. Then in 1983, things changed forever when 'Tour caddies' were allowed at the Masters for the first time. Memories of a better day live on as Ward Clayton documents a history as compelling as the game itself. Men on the Bag delivers a story never-before-told with passion and candor.

In recent years the topic of acculturation has evolved from a relatively minor research area to one of the most researched subjects in the field of

cross-cultural psychology. This edited handbook compiles and systemizes the current state of the art by exploring the broad international scope of acculturation. A collection of the world's leading experts in the field review the various contexts for acculturation, the central theories, the groups and individuals undergoing acculturation (immigrants, refugees, indigenous people, expatriates, students and tourists) and discuss how current knowledge can be applied to make both the process and its outcome more manageable and profitable. Building on the theoretical and methodological framework of cross-cultural psychology, the authors focus specifically on the issues that arise when people from one culture move to another culture and the reciprocal adjustments, tensions and benefits involved.

It is often said that the practice of management is in crisis, and that managers are now finding it harder than ever to develop strategies which withstand the shocks of the marketplace. This illuminating book cuts through these conflicting issues to show how organizational communication plays a vital role in confronting uncertainty. Arguing that many managers fail to adequately consider the communication consequences of the decision making process and its impact on organizational effectiveness, Hargie and Tourish present here numerous organizational communication insights, and show how they reveal a way through these dilemmas. Based on cutting-edge research findings and case studies, this book features contributions from the UK, USA, Canada, New Zealand and Norway, bringing multiple perspectives to this topical subject. The result is a comprehensive guide to organizational communication useful for managers, academics and students.

Tony Jacklin rescued the Ryder Cup from oblivion. Following years of American domination, interest in the event nosedived in the 1970s. It was Tony's appointment as captain of Europe in 1983 that helped resuscitate the matches and launch the remarkable transformation of a competition that is now one of the biggest showpiece occasions in the world of sport. This book takes us on a journey through Tony's Ryder Cup career, his seven matches as a player and his four as captain. It details his friendships with some of the game's greats like Seve Ballesteros, Jack Nicklaus and Arnold Palmer but also chronicles the times when he hit rock bottom - the sudden and unexpected death of his first wife, his own recent struggles with ill health, the year he lost everything financially and his affair with a sixteen-year-old that was splashed on the front page of a tabloid newspaper.

The central argument of this book is that cognition is not the whole story in understanding intellectual functioning and development. To account for inter-individual, intra-individual, and developmental variability in actual intellectual performance, it is necessary to treat cognition, emotion, and motivation as inextricably related. Motivation, Emotion, and Cognition: Integrative Perspectives on Intellectual Functioning and Development: *represents a new direction in theory and research on intellectual functioning and development; *portrays human intelligence as fundamentally constrained by biology and adaptive needs but modulated by social and cultural forces; and *encompasses and integrates a broad range of scientific findings and advances, from cognitive and affective neurosciences to cultural psychology, addressing fundamental issues of individual differences, developmental variability, and cross-cultural differences with respect to intellectual functioning and development. By presenting current knowledge regarding integrated understanding of intellectual functioning and development, this volume promotes exchanges among researchers concerned with provoking new ideas for research and provides educators and other practitioners with a framework that will enrich understanding and guide practice.

A multidisciplinary exploration of agency as a central psychological phenomenon based on the affective, embodied, and relational processing of human experience. Agency is a central psychological phenomenon that must be accounted for in any explanatory framework for human action.

According to the diverse group of scholars, researchers, and clinicians who have contributed chapters to this book, psychological agency is not a fixed entity that conforms to traditional definitions of free will but an affective, embodied, and relational processing of human experience. Agency is dependent on the biological, social, and cultural contexts that inform and shape who we are. Yet agency also involves the creation of meaning and the capacity for imagining new and different ways of being and acting and cannot be entirely reduced to biology or culture. This generative potential of agency is central to the process of psychotherapy and to psychological change and development. The chapters explore psychological agency in theoretical, clinical and developmental, and social and cultural contexts. Psychological agency is presented as situated within a web of intersecting biophysical and cultural contexts in an ongoing interactive and developmental process. Persons are seen as not only shaped by, but also capable of fashioning and refashioning their contexts in new and meaningful ways. The contributors have all trained in psychology or psychiatry, and many have backgrounds in philosophy; wherever possible they combinetheoretical discussion with clinical case illustration. It has been many years since the last book on golfing in Kenya was written. Comprehensive in its coverage, this guide covers all aspects of golfing in Kenya. It has been written with the visiting golfer in mind, but is nonetheless candid and includes much local humour and club lore. Cartoons, area and course maps and photographs in full colour, and descriptions of area side-trips and diversions are also included. Background information on the history of the sport, and planning a golfing safari are given. Five chapters cover the five sections of the country into which the golf courses have been grouped, each section giving an area map and club fact files, and an overview of play for the course. The final part of the book gives information about getting about, accommodation, and other useful travel information.

A Life Worth Living brings together the latest thought on Positive Psychology from an international cast of scholars. It includes historical, philosophical, and empirical reviews of what psychologists have found to matter for personal happiness and well-being. The contributions to this volume agree on principles of optimal development that start from purely material and selfish concerns, but then lead to ever broader circles of responsibility embracing the goals of others and the well-being of the environment; on the importance of spirituality; on the development of strengths specific to the individual. Rather than material success, popularity, or power, the investigations reported in this volume suggest that personally constructed goals, intrinsic motivation, and a sense of autonomy are much more important. The chapters indicate that hardship and suffering do not necessarily make us unhappy, and they suggest therapeutical implications for improving the quality of life. Specific topics covered include the formation of optimal childhood values and habits as well as a new perspective on aging. This volume provides a powerful counterpoint to a mistakenly reductionist psychology. They show that subjective experience can be studied scientifically and measured accurately. They highlight the potentiality for autonomy and freedom that is among the most precious elements of the human condition. Moreover, they make a convincing case for the importance of subjective phenomena, which often affect happiness more than external, material conditions. After long decades during which psychologists seemed to have forgotten that misery is not the only option, the blossoming of Positive Psychology promises a better understanding of what a vigorous, meaningful life may consist of.

In recent years, peace psychology has grown from a utopian idea to a means of transforming societies worldwide. Yet at the same time peacebuilding enjoys global appeal, the diversity of nations and regions demands interventions reflecting local cultures and realities. Peace Psychology in Asia shows this process in action, emphasizing concepts and methods diverging from those common to the US and Europe. Using examples from China, India, Indonesia, the Philippines, and elsewhere in the region, chapter authors illuminate the complex social, political, and religious conditions that have fostered war, colonialism, dictatorships, and ethnic strife, and the equally intricate personal and collective psychologies that need to be developed to encourage reconciliation, forgiveness, justice, and community. Peace Psychology in Asia: Integrates psychology, history, political science, and local culture into concepts of peace and reconciliation. Highlights the indigenous aspects of peace psychology. Explains the critical relevance of local culture and history in peace work. Blends innovative theoretical material with empirical evidence supporting peace interventions. Balances its coverage among local, national, regional, and global contexts. Analyzes the potential of Asia as a model for world peace. As practice-driven as it is intellectually stimulating, Peace Psychology in Asia is vital reading for social and community psychologists, policy analysts, and researchers in psychology and sociology and international studies, including those looking to the region for ideas on peace work in non-Western countries.
