This book explores policy and practice at the postsecondary level in the South Pacific and sets an agenda for the twentyfirst century.

The New Buffalo

Rutgers University Press

This report describes a new system of credentialing that has arisen in the information technology and telecommunications industries over the past decade. It compares this system to traditional higher education, identifying both similarities and dissimilarities, and points to some cases in which the two interact.... The summary section of this report emphasizes the major themes of the certification system

and its relationship to higher education: 1.

The system is global and operates in many languages. 2. The student, not the institution, is at the center of the system.

3. The system has brought competency-based education and performance assessment to a status they have never enjoyed within traditional higher education. 4.

Certification replace neither experience nor degrees, and the IT system does not pretend to be higher education. the summary also indicates the critical need for more information on certification candidates and providers of course work, since the new system is now large enough to play a role

in state and national planning for postsecondary education. (HoF/text adopted).

Postsecondary Education for First-Generation and Low-Income Students in the Ivy League English Learners Access to Postsecondary Education

This edited volume will be an important and key resource for managers, researchers, and policy makers in the field of Higher Education and Further Education. It offers insights into a radical new way of organizing post-compulsory education on an international basis that directly promotes a social justice agenda (i.e., widening of student participation). Around the world post-

compulsory education is divided between Universities and Community-based Colleges. Universities are typically concerned with "higher" education, while community based colleges focus on "further" and technical education. In response to a range of social and economic forces there has been a growth in the number of dual sector institutions (or "duals") that span this divide. *Challenging Boundaries* brings together leading international thinkers, policy analysts, academic managers, and researchers who question whether duals can provide relevant education to students and appropriate graduates for the economy, while also offering greater

opportunities to disadvantaged students. Challenging Boundaries provides an analysis of the potential of "dual sector" institutions in North America, UK, South Africa, and Australasia. This volume draws on the very latest research findings and effectively looks to: Challenge conventional thinking about post-compulsory education Demonstrate how a number of institutions internationally are addressing the organizational, managerial, and cultural challenges of operating as dual sector universities Combine the latest research in the field from a range of international scholars with operational insights from university

leaders Provide a key resource for education policy makers and researchers and students of educational policy and management at masters and doctoral level

PostSecondary Education in the South Pacific Univ. of Manitoba Press

The Workshop on the Knowledge Economy and Postsecondary Education documents changes seen in the postsecondary education system. In her report Lisa Hudson focuses on who is participating in postsecondary education; Tom Bailey concentrates on community colleges as the most responsive institutions to employer needs; Carol Twigg surveys the ways that four-year

institutions are attempting to modify their curricular offerings and pedagogy to adapt those that will be more useful; and Brian Pusser emphasizes the public's broader interests in higher education and challenges the acceptance of the primacy of job preparation for the individual and of "market" metaphors as an appropriate descriptor of American higher education. An example of a for-profit company providing necessary instruction for workers is also examined. Richard Murnane, Nancy Sharkey, and Frank Levy investigate the experience of Cisco high school and community college students need to

testify to their information technology skills to earn certificates. Finally, John Bransford, Nancy Vye, and Helen Bateman address the ways learning occurs and how these can be encouraged, particularly in cyberspace.

The ... Annual Pennsylvania Conference on Post-secondary Occupational Education

Springer
Assessments to help determine the preferences of students for postsecondary training, the fit with particular types of institutions, and the need for accommodations and modifications.

Pathways of progression Routledge
"An inventory of program of study at

the post-secondary education level: 1975-1976 has been prepared by the staff of the State Post-Secondary Education Commission as a first step towards understanding, analyzing, and planning for the post-secondary educational needs of the people of the State of Hawaii. The inventory includes both what programs are offered by post-secondary institutions within the State and what programs are not. No judgments are made; rather only that the programs of study are available or that they are not available within the boundaries of the State of Hawaii -- Page [1].

"As mandated by federal law, schools

must assist students with disabilities in developing appropriate goals and transition plans for life after high school. Written for teachers and student assistance professionals, this comprehensive and practical book focuses on how the planning process can prepare students for the greater independence of postsecondary settings. Recognizing that students with disabilities have a wide range of needs, this resource discusses the transition requirements of various postsecondary options, including colleges, universities, career and technical training programs, and employment. Developed by highly regarded experts, this authoritative guide

includes: the most up-to-date information on key legislation that affects transition services and the rights and responsibilities of students and professionals; advice for helping students document disabilities, develop self-advocacy skills, and seek accommodations; information about postsecondary resources on campus and in the community; students' personal stories and a look at the role of family involvement. An overview of transition considerations for middle school youth."-- Publisher's website.
[The Role of the Commission in Achieving Educational Equity](#) DIANE Publishing
Improving Postsecondary Choice

and Pathways explores the influences and experiences throughout a student's transition from secondary to postsecondary education, with an emphasis on the fit between academic readiness and institutional selectivity. Designed to consider the variegated experiences and factors contributing to student-college match, chapters in this volume explore the challenges associated with the college search, choice, and application processes and how they affect specific student groups. Additionally, this text investigates the stakeholders and programs designed to assist students in finding suitable postsecondary

institutions. This book holistically explores the varied aspects within student-college match while also providing a glimpse into innovative approaches for improving outcomes via an expanded consideration of college choice and student-college match determinations.

Productivity in Higher Education McGill-Queen's Press - MQUP
Global massification of postsecondary education, with more than 200 million students studying at an untold number of institutions focusing on every specialization possible, necessitates a differentiated system of postsecondary education in every country. This book provides the first comparative study of how postsecondary

education has evolved in 13 countries. The study offers an analysis of current global realities and how different nations have constructed their response. Our research shows that few countries have developed rational and differentiated academic systems to meet new realities. The book provides insights regarding useful approaches for the development of academic systems. The book reveals similarities and differences in the 13 case studies as different governments have expanded postsecondary education to respond to the massification of enrollment. Postsecondary education has become diversified, but for the

most part not adequately differentiated in most countries. Several of the case studies underscore the challenge of sustaining differentiation within the system if credentials from non-university, postsecondary institutions are considered of lesser social status. Too often institutions that successfully address the practical needs of national economies are ultimately merged into the university system. There is an urgent need for the planning and structuring of coherent systems of postsecondary education to serve the increasingly diverse clientele in need of the skills required by the knowledge economy. This study is the first

global analysis aimed at understanding how post-secondary education can be organized to meet society's requirements and points to the need for designing coherent academic systems.

Measuring the Value of a Postsecondary Education Pro Ed Universal Design in Higher Education looks at the design of physical and technological environments at institutions of higher education; at issues pertaining to curriculum and instruction; and at the full array of student services. Universal Design in Higher Education is a comprehensive guide for researchers and practitioners on creating fully accessible college and

university programs. It is founded upon, and contributes to, theories of universal design in education that have been gaining increasingly wide attention in recent years. As greater numbers of students with disabilities attend postsecondary educational institutions, administrators have expressed increased interest in making their programs accessible to all students. This book provides both theoretical and practical guidance for schools as they work to turn this admirable goal into a reality. It addresses a comprehensive range of topics on universal design for higher education institutions, thus making a crucial contribution to the

growing body of literature on special education and universal design. This book will be of unique value to university and college administrators, and to special education researchers, practitioners, and activists.

The Knowledge Economy and Postsecondary Education Routledge
Measuring the Value of a Postsecondary Education is an insightful collection of essays that respond to current and pressing questions in the field of higher education: What do we mean by "quality" of education? What do courses and programs promise to deliver, and do they succeed? What do we know about improving learning outcomes, and is reform possible?

Comprised of papers presented at a conference of experts convened by the Higher Education Quality Council of Ontario in 2011, the book begins by evaluating pioneering initiatives in Europe, and follows this with reports on efforts to measure and evaluate learning outcomes. Drawing on over two decades of work by international agencies, governments, and foundations in identifying and evaluating learning outcomes in higher education, Measuring the Value of a Postsecondary Education encourages educational institutions to draw on this evidence in revising course and program offerings. Bringing together international

leaders and innovators in the field, this book is an important analysis of progress in enhancing learning quality and directions for future reform.

Contributors include Jeana Abromeit (Alverno College), Roger Benjamin (Council for Aid to Education), Ken Dryden (Canadian politician), Michael Gallagher (Group of Eight), Virginia Hatchette (Postsecondary Education Quality Assessment Board), Jillian Kinzie (Indiana University), Diane Lalancette (Organisation for Economic Co-operation and Development), Holiday Hart McKiernan (Lumina Foundation), Robert Wagenaar (University of Groningen), and Lorne A. Whitehead

Postsecondary Education and Training
Routledge

The government of Qatar has made significant investments in post-secondary education to ensure that Qataris are able to contribute to the country's social and economic goals. The authors describe RAND's analysis of occupational demand and related post-secondary educational opportunities, and offer recommendations for improving the country's current provision of post-secondary education.

Flow of Minority Students
Routledge

How do the benefits of higher education compare with its costs, and how does this comparison vary

across individuals and institutions? These questions are fundamental to quantifying the productivity of the education sector. The studies in *Productivity in Higher Education* use rich and novel administrative data, modern econometric methods, and careful institutional analysis to explore productivity issues. The authors examine the returns to undergraduate education, differences in costs by major, the productivity of for-profit schools, the productivity of various types of faculty and of outcomes, the effects of online education on the higher education market, and the ways in which the productivity of different institutions responds to market forces. The

analyses recognize five key challenges to assessing productivity in higher education: the potential for multiple student outcomes in terms of skills, earnings, invention, and employment; the fact that colleges and universities are “multiproduct” firms that conduct varied activities across many domains; the fact that students select which school to attend based in part on their aptitude; the difficulty of attributing outcomes to individual institutions when students attend more than one; and the possibility that some of the benefits of higher education may arise from the system as a whole rather than from a single institution. The findings and the

approaches illustrated can facilitate decision-making processes in higher education.

Universal Design in Higher Education

McGill-Queen's Press - MQUP

After decades of national, state, and institutional initiatives to increase access to higher education, the college pipeline for American Indian and Alaska Native students remains largely unaddressed. As a result, little is known and even less is understood about the critical issues, conditions, and postsecondary transitions of this diverse group of students. Framed around the concept of tribal nation building, this monograph reviews the research on higher education for

Indigenous peoples in the United States. It offers an analysis of what is currently known about postsecondary education among Indigenous students, Native communities, and tribal nations. Also offered is an overview of the concept of tribal nation building, with the suggestion that future research, policy, and practice center the ideas of nation building, sovereignty, Indigenous knowledge systems, and culturally responsive schooling.

Postsecondary Education and Transition for Students with Learning Disabilities Education Department
First published in 1992. This book recognises that the integration of deaf students into mainstream higher

education raises complex and challenging problems. The authors provide an assessment of state-of-the-art practice in postsecondary settings and suggest theoretical and practical approaches to providing support.

Preparing for the Workplace UNESCO Publishing

Job training has taken a central place among strategies to boost U.S. competitiveness in the world and ensure a high standard of living. Decision making in this area has a major impact on American workers who do not earn 4-year college degrees—fully three-quarters of the workforce. This timely volume reviews the state of postsecondary training for work in the United States; it

addresses controversies about federal job policies and programs and outlines a national approach to improved quality and accessibility in workplace preparation. The committee focuses on the various types of training individuals need during their working lives. Leading experts explore the uneven nature of postsecondary training in the United States and contrast our programs with more comprehensive systems found in other major industrial countries. The authors propose what the federal government can—and cannot—do in improving postsecondary training, exploring appropriate roles and responsibilities for

federal, state, and private interests. The volume highlights opportunities for improvement in the development of skills standards, student financial aid, worker retraining, second-change education, and the provision of better information to program managers, public officials, and trainees. With a wealth of insightful commentary and examples, this readable volume will be valuable to federal and state policymakers, leaders in the field of training, educators, employers, labor unions, and interested individuals. *Higher Education Reports* Brookes Publishing Company

This book examines how previously excluded high-achieving, low-income

students are faring socially and academically at an Ivy League college in New England. In the past, research conducted on low-income students in elite schools focused mainly on the admissions process. As a result, there is a dearth of research on what happens to low-income students once they are admitted and attend classes. This book chronicles an ethnographic study of twenty low-income men and women in their senior year at Dartmouth College and follows up with them four and twelve years post-graduation. By helping to bring visibility and self-awareness to low-income students and expose class issues and struggles, the author hopes to

encourage elite institutions to change their policies and practices to address the needs of these students.

Preparing for Post-Secondary Education
Routledge

"In *Mothering by Degrees*, I show how single mothers who pursue college degrees in early 21st century America must navigate a difficult course as they attempt to reconcile their identities as single mothers, college students, and, in many cases, employees. As they combine these multiple and often competing roles and responsibilities, they must also negotiate a balance between cultural ideals of motherhood and their own definitions of what it means to be a

"good" mother, particularly as those ideals and definitions are shaped within context of post-welfare reform America and the post-secondary institutions they attend. By comparing the experiences of nearly 100 single mother college students attending three postsecondary education institutions in the United States, I illustrate how these women navigate the various obstacles they encounter, especially obstacles related to financial concerns, child care, time constraints, and the "chilly" climate of higher education. In addition, I demonstrate that the women regard postsecondary education not only as a means of escaping poverty but also as an

extension of their mothering work, something they do to help ensure the long-term health and well-being of their children. Thus, this project provides a situated, comparative account of the experiences of single mothers who are college students in order to foster a better understanding of the complex ideologies and social structures that influence the life choices and education experiences of members of this important but understudied student population. Finally, the project discusses policies and programs that can help provide better support to single mother and may diminish the challenges they face as they endeavor to complete their education"--

Challenging

Boundaries University of Chicago Press

Most Canadian parents have had to assume a larger share of the financial costs of their children's post-secondary education because of declining government funding and changing loans and bursary programs. *Preparing for Post-Secondary Education* considers the impact of increased private support and the planning strategies parents use based on information from a 1999 Statistics Canada national survey of 34,000 households. The contributors begin by examining changes to national and international educational funding policies and the relationship between public and private

costs. They focus on the role of families in marshaling the necessary resources, demonstrating that access to post-secondary education is also determined by social capital. The authors conclude that new partnerships between parents, the state, and schools are redefining the various players' roles and commitments to the educational futures of Canadian children. Contributors include the late Stephen Bell

(York University), Scott Davies (McMaster University), Ross Finnie (Queen's University), George Frempong (York University), Dianne Looker (Acadia University), Nancy Mandell (York University), Sheila Marshall (University of British Columbia), Hans Schuetze (University of British Columbia), Victor Thiessen (Dalhousie University), Jim White (University of British Columbia), and Jamie Wood (University of British Columbia).
