 Congratulations! You survived breast cancer. This should be a time to celebrate—so why do you feel so empty and alone? Medical professionals prepare you for surgery and other treatments, but do not always address your emotional and sexual health. In *Intimacy After Breast Cancer*, breast cancer survivor Gina Maisano honestly discusses the sensitive issues of self-esteem, body image, and sexuality to help you become the total woman you still are. Part One begins by examining the emotions experienced by breast cancer survivors, including anxiety and fear of recurrence. It then offers guidance on regaining the confidence to start living again. The mental and physical effects of post-surgical medications are discussed, along with solutions for maintaining optimum health. Part Two focuses on rediscovering your sexuality. In a compassionate manner, it addresses the issues that most often challenge both single and married women and presents suggestions for overcoming them. Love and intimacy do not have to end with a breast cancer diagnosis. In *Intimacy After Breast Cancer*, Gina Maisano will help you rediscover the joys of being a woman.

New Beginnings Build-A-Boob

A NEW YORK TIMES BESTSELLER As a healthy, happy thirty-nine-year-old mother with no family history of breast cancer, being diagnosed with the disease rocked Hollye Jacobs's world. Having worked as a nurse, social worker, and child development specialist for fifteen years, she suddenly found herself in the position of moving into the hospital bed. She was trained as a clinician to heal. In her role as patient, the healing process became personal. Exquisitely illustrated with full-color photographs by Hollye's close friend, award-winning photographer Elizabeth Messina, *The Silver Lining* is both Hollye's

memoir and a practical, supportive resource for anyone whose life has been touched by breast cancer. In the first section of each chapter, she describes with humor and wisdom her personal experience and gives details about her diagnosis, treatment, side effects, and recovery. The second section of each chapter is told from Hollye's point of view as a medical expert. In addition to providing a glossary of important terms and resources, she addresses the physical and emotional aspects of treatment, highlights what patients can expect, and provides action steps, including: What to do when facing a diagnosis How to find the best and most supportive medical team What questions to ask What to expect at medical tests How to talk with and support children How to relieve or avoid side effects How to be a supportive friend or family member How to find Silver Linings Looking for and finding Silver Linings buoyed Hollye from the time of her diagnosis throughout her double mastectomy, chemotherapy, radiation, and recovery. They gave her the balance and perspective to get her through the worst days, and they compose the soul of the book. *The Silver Lining* of Hollye's illness is that she can now use the knowledge gleaned from her experience to try to make it better for those who have to follow her down this difficult path. This is why she is sharing her story. Hollye is the experienced girlfriend who wants to help shed some light in the darkness, provide guidance through the confusion, and hold your hand every step of the way. At once comforting and instructive, realistic and inspiring, *The Silver Lining* is a visually beautiful, poignant must-read for everyone who has been touched by cancer.

Breast Cancer in Young Women Elsevier Health Sciences
 More than 100,000 American women undergo mastectomy and breast reconstruction every year because of breast cancer. Thousands more are having double mastectomies to prevent it. So much has been written about breast cancer, and so much overlooks the reality of reconstruction when a woman has a mastectomy and opts for this process. It is difficult, painful, and traumatizing at times. Most women do not emerge with a new set of breasts and nipples in a single operation. Breast reconstruction usually takes months and can take years to finish. Some women never do, living without nipples or with imperfect results. Others opt not to have reconstruction at all. Still others struggle with one of the biggest women's health questions today: lumpectomy and radiation or mastectomy? *Breast Cancer Surgery and Reconstruction* offers a glimpse into the big picture of the various stages and types of breast reconstruction using stories and photos of real women. It offers a true picture of what breast reconstruction entails, and offers hope to those facing it. This is a book to help women with a variety of issues surrounding their choices, with powerful insights from women who have been there.

Intensity-modulated radiation therapy (IMRT), one of the most important developments in radiation oncology in the past 25 years, involves technology to deliver radiation to tumors in the right location, quantity and time. Unavoidable irradiation of surrounding normal tissues is distributed so as to preserve their function. The achievements and future directions in the field are grouped in the three sections of the book, each suitable for supporting a teaching course. Part 1 contains topical reviews of the basic principles of IMRT, part 2 describes advanced techniques such as image-guided and biologically based approaches, and part 3 focuses on investigation of IMRT to improve outcome at various cancer sites.

This comprehensive manual on breast disease deals with all aspects of the surgical management of both benign and malignant disease. The chapters are written by leading experts, clearly illustrated with line drawings, clinical photos and diagnostic radiology images. *Breast Surgery* is divided into sections following the patterns of patient management from diagnosis through treatment and reconstruction. Part One, "Fundamentals", addresses common aspects of working with breast cancer patients and understanding the members of the breast cancer team. Part Two is an overview of "Biologic Principles". Parts Three, Four, and Five review "The Initial Evaluation", "Common Presenting Problems", and "Diagnostic Techniques". Part Six, an overview of breast cancer treatment, includes chapters on "Breast Cancer Staging", "Introduction to

Gene Expression Profiling", and "Psychological Issues". Part's Seven through Twelve deal with important aspects of breast surgery and interdisciplinary care including pathology, medical oncology, and radiation oncology, with several chapters on neoadjuvant therapy and partial breast irradiation. Part Thirteen includes many chapters on followup of the breast cancer survivor, including late changes on physical exam and imaging, local recurrence, and treating metastatic disease. Though not intended to replace a text reference, *Breast Surgical Disease and Interdisciplinary Management* offers a comprehensive guide to provide practical advice for those seeking concise, expert input that can be quickly accessed on multiple topics associated with the care of the breast cancer patient.

Fat grafting is rapidly becoming one of the most requested procedures for a new generation. It offers a valuable tool to address patient demands for less invasive cosmetic procedures that produce natural, long-lasting results. *Structural Fat Grafting*, written by Dr. Sydney Coleman, who helped pioneer this technique, is the first comprehensive work on this topic. It provides surgeons with the expert guidance needed to master this technique for a wide variety of applications, including facial and hand rejuvenation, adjustment of facial proportions, and correction of liposuction deformities. This remarkable book presents a revolutionary new model for analyzing facial aging that is destined to dramatically alter the way you analyze and treat patients. Each clinical chapter is a monograph unto itself, filled with case presentations, tips and tricks, and sound advice to guide the surgeon through the key maneuvers necessary for fat grafting in each anatomic area. Learn Exciting, New Ways to Approach Classic Problems Beautifully illustrated with step-by-step photographs and illustrations, it provides a complete blueprint for achieving positive, repeatable outcomes from a procedure that offers an alternative to operations that elevate and tighten. Numerous preoperative, intraoperative, and postoperative views are included to demonstrate the efficacy of structural fat grafting and the excellent long-term results that can be expected. Dr. Coleman's technique for preparation, harvest, refinement, and placement of fat is carefully detailed to help you achieve long-lasting, stable results. Information about incisions, levels of infiltration, volume ranges, technical considerations, key strategies, most likely technical mistakes, and possible complications are included in each chapter to provide the reader with the guidance for performing this technique for a variety of clinical applications. The accompanying CD features operative video demonstrating fat grafting techniques in various anatomic areas. Readers will find this exciting volume invaluable as they discover the full arsenal of skills required to master this increasingly popular procedure.

"Build-A-Boob" is the inspirational story of one woman's refusal to give up on having her breasts and her life restored after breast cancer radiation destroyed her chest at the age of 46. Breast cancer affects us all. Most of us know someone who has it or has had it. What we don't know and don't often hear about are the stories of pain and the physical and emotional scars that are left behind. This is about survivalafter the cure. Her story offers hope to millions of women, showing how actually using liposuction can rebuild a breast by regenerating one's own skin. Very few plastic surgeons are currently using this procedure and this is an important issue for all women. The technique of using liposuction to rebuild a breast in its entirety is not new. What is new is that Lisa Masters' stems cells from her fat totally restored the skin and fat damaged by radiation allowing the eventual insertion of a permanent implant. All of this was done through trial and error, and her plastic surgeon, Dr. Sergio Zamora says that this procedure works every single time. The process took four and half years to complete. In addition, she addresses medical insurance concerns and how her HMO, Florida Health Care BC/BS, supported her through this lengthy process. Lisa, like millions after being diagnosed with invasive breast cancer, went through the typical therapies. She underwent two lumpectomies, chemotherapy, a bilateral mastectomy followed by immediate reconstruction with the insertion of tissue expanders and a hysterectomy. When she healed from the surgeries, she had radiation therapy. It only took 15 additional surgeries, but, Lisa Masters now has two breasts and a purpose...to spread the word and break the silence of those who live with the scars that breast cancer has left behind. The book is written from her perspective which includes 25 very graphic breast photos from beginning to end along with her own photo in order to make the story personal. The medical photos alone tell a story of success and they are difficult to look at. However, she feels those photos must be shown to the world and must be connected to a face; her face. Build-A-Boob talks about Lisa Masters' family and their life prior to cancer. The book also talks about the toll this disease took on everyone involved. "Build-A-Boob" is a story of failure, pain, determination and success told with humor and optimism that involves a tenacious plastic surgeon and a woman who never settled. Included is a "Forward" written by plastic surgeon Dr. Sergio Zamora, Daytona Beach, FL

Breast Surgical Techniques and Interdisciplinary Management Simon and Schuster

The definitive guide to breast reconstruction. Since 2002, *The Breast Reconstruction Guidebook* has been the best resource on this topic for women who have had a mastectomy. Equal parts science and support, it is filled with stories that illustrate the emotional and physical components of breast reconstruction. Kathy Steligo, a gifted writer and breast cancer survivor who has twice had breast reconstruction, compassionately answers women's questions about how they will respond emotionally and physically to losing a breast, whether to treat or prevent breast

cancer. Steligo provides detailed descriptions of the various surgical options for mastectomy and reconstruction, as well as information on choosing and paying for a surgeon, preparing for and recovering from surgery, and handling the many practical details and difficult decisions women will face along the way. A road map of the mastectomy and reconstruction journey, this book gives women the comprehensive, unbiased details they need to make their own informed decisions about whether reconstruction—and which reconstructive option—is right for them. Readers learn how breasts can be recreated using implants or their own tissue and the advantages and disadvantages of each option. Surgery timelines, recovery, and potential problems (and how they can be resolved) are also explained. A new foreword by Dr. Minas Chrysopoulos, MD, of the PRMA Plastic Surgery Center for Advanced Breast Reconstruction, highlights the book's strengths and offers a medical perspective on breast cancer and reconstructive surgery. The extensively updated text includes new discussions of • innovative reconstructive procedures • contralateral mastectomy • the benefits and limitations of nipple- and areola-sparing mastectomies • nipple delay procedure • patient-controlled tissue expansion • cohesive gel silicone implants • microsurgical advances that improve tissue flap procedures • fat grafting • nipple reconstruction • nipple and areola tattooing • reconstruction with the BRAVA system • pregnancy after TRAM • male mastectomy and reconstruction • decision making and solving cosmetic and medical post-op problems • surgical procedures that reduce the risk of cancer • the latest research data on mastectomy and reconstruction • and much more

Clinical Radiation Oncology Tate Pub & Enterprises LLC

Two years after she underwent a mastectomy and chemotherapy, Barbara Bradfield's aggressive breast cancer had recurred and spread to her lungs. The outlook was grim. Then she took part in Genentech's clinical trials for a new drug. Five years later she remains cancer-free. Her-2 is the biography of Herceptin, the drug that provoked dramatic responses in Barbara Bradfield and other women in the trials and that offers promise for hundreds of thousands of breast cancer patients. Unlike chemotherapy or radiation, Herceptin has no disabling side effects. It works by inactivating Her-2/neu--a protein that makes cancer cells grow especially quickly-- produced by a gene found in 25 to 30 percent of all breast tumors. Herceptin caused some patients' cancers to disappear completely; in others, it slowed the progression of the disease and gave the women months or years they wouldn't otherwise have had. Herceptin is the first treatment targeted at a gene defect that gives rise to cancer. It marks the beginning of a new era of treatment for all kinds of cancers. Robert Bazell presents a riveting account of how Herceptin was born. Her-2 is a story of dramatic discoveries and strong personalities, showing the combination of scientific investigation, money, politics, ego, corporate decisions, patient activism, and luck involved in moving this groundbreaking drug from the lab to a patient's bedside. Bazell's deft portraits introduce us to the remarkable people instrumental in Herceptin's history, including Dr. Dennis Slamon, the driven UCLA oncologist who played the primary role in developing the treatment; Lily Tartikoff, wife of television executive Brandon Tartikoff, who tapped into Hollywood money and glamour to help fund Slamon's research; and Marti Nelson, who inspired the activists who lobbied for a "compassionate use" program that would allow women outside the clinical trials to have access to the limited supplies of Herceptin prior to FDA approval of the drug. And throughout there are the stories of the heroic women with advanced breast cancer who volunteered for the trials, risking what time they had left on an unproven treatment. Meticulously researched, written with clarity and compassion, Her-2 is masterly reporting on cutting-edge science.

Structural Fat Grafting Simon and Schuster

This book serves as a practical guide for the prevention and treatment of radiation dermatitis. Skin toxicity caused by radiation treatment is common among cancer patients and minimizing the frequency and severity of these reactions improves quality of life and prevents interruptions that can compromise local-regional control. Each chapter is devoted to a

specific disease site, such as the head and neck, breast, gastrointestinal, genitourinary, gynecologic, and central nervous system. Pediatric malignancies and wound care for locally advanced cancers are also discussed. For each topic, the range and frequency of the observed skin reactions, factors influencing these reactions, the typical course of each reaction and its resolution, and the interventions used are presented. This book provides evidence where it exists for the specific interventions and an extensive illustration program depicts the various reactions and their response to treatment protocols. *Skin Care in Radiation Oncology: A Practical Guide* presents a framework for patient care in an era of advancing technology and systemic and targeted therapies and is a valuable resource for radiation oncologists, dermatologists, and residents.

Breast Cancer Surgery and Reconstruction Elsevier Health Sciences

Master the basic principles and techniques of radiation safety! *Radiation Protection in Medical Radiography, 9th Edition* makes it easy to understand both basic and complex concepts in radiation protection, radiobiology, and radiation physics. Concise, full-color coverage discusses the safe use of ionizing radiation in all imaging modalities, including the effects of radiation on humans

at the cellular and systemic levels, regulatory and advisory limits for exposure to radiation, and the implementation of radiation safety practices for patients and personnel. From a team of authors led by radiologic technology educator Mary Alice Statkiewicz Sherer, this text also prepares you for success on the ARRT certification exam and state licensing exams. Clear and concise writing style covers key concepts in radiation protection, biology, and physics in a building-block approach progressing from basic to more complex. Convenient, easy-to-use features make learning easier with chapter outlines and objectives, listing and highlighting of key terms, and bulleted summaries. Full-color illustrations and photos depict important concepts, and tables make information easy to reference. Timely coverage of radiation protection regulations addresses radiation awareness and education efforts across the globe. Chapter summaries and review questions allow you to assess your comprehension and retention of the most important information, with answers on the Evolve companion website. NEW! Updated content reflects the latest ARRT and ASRT curriculum guidelines. NEW! Updated NCRP and ICRP content includes guidelines, regulations, and radiation quantities and units, explaining the effects of low-level ionizing radiation, demonstrating the link between radiation and cancer and other diseases, and providing the regulatory perspective

needed for practice.

The Guide to Breast Reconstruction Nova Biomedical Books
As women quickly discover, their life when treatment ends is very different from what it was before their diagnosis. Often exhausted, anxious, and emotionally volatile, they are beset by physical discomforts, fearful of intimacy, afraid for their children, worried about recurrence. Anticipating a return to "normalcy," they discover that the old version of normal no longer applies. There could be no more knowledgeable guide for women embarking on this complicated journey than Hester Hill Schnipper, who is herself both an experienced oncology social worker and a breast cancer survivor. This comprehensive handbook provides jargon-free information on the wide range of practical issues women face as they navigate the journey back to health, including: •Managing physical problems such as fatigue, hot flashes, and aches and pains •Handling relationships: your children, your partner, your parents, your friends. •How to regain emotional and sexual intimacy •Coping with financial and workplace issues •Genetic testing: why, whether, when •How to move beyond the fear of recurrence •And much more This indispensable book will help you rediscover your capacity for joy as you move forward into the future—as a survivor.
