We are an institution of higher learning; we need to be the best with everything we do. We are preparing the next generation of heroes for the greatest fighting force on the planet - the 8404 Hospital Corpsman assigned to the United States Marine Corps. They operate at the tip-of-the spear providing combat medicine to our operational forces; they are critical to the success of the Navy & Marine Corps Medicine Team. What each one of us does on a daily basis matters, regardless of our job. We all contribute to the mission. No one job is more important than the other. If just one link (team member) in this chain fails to perform a portion of the mission to

standard, we all fail. You have the ability to make a positive difference in peoples' lives every day. Every member of this team should ask themselves, "Am I living by our core values and making decisions that are consistent with these values when I interact with students, staff and the American public." Key points: - Know your chain of command and how to use it. You have not exhausted your chain of command at FMTB-West until the issue reaches me. - If you are lacking something to perform your mission, bring it to the attention of leadership so we can promptly address it. - Any safety issue should immediately be brought to leadership. - Continually strive to improve processes; ask for help before it's too late (in all aspects of your life and career). - If you see a problem, fix it or bring it to the attention of someone who can. Don't ignore it. - Supporting each other is just as important as supporting the mission. - Continue the relentless pursuit of customer satisfaction; feedback is a valuable tool in life and career. - Basic military courtesy should be a part of everyday life. - Always strive to do the right thing, even when no one is looking or when tempted to take the "easy" wrong. As a leader, I believe all members of the team are important. Our civilian shipmates are essential to the success of our mission. As a military leader, I believe, as the Sailor creed says, "I proudly serve my country's Navy combat team with Honor, Courage and Commitment. I am committed to excellence and the fair treatment of all". I cannot over emphasize the importance of leadership from E-1 to O-6, everyone has a part; I expect officers to lead from the front by setting the example. Be sure that regularly scheduled performance counseling sessions are conducted for military and civilian employees. Cover the good which should be sustained as well as the areas which need improvement. Although I like to be informed, I believe in allowing leaders to lead, managers to manage. A big part of my job is to provide you the support systems necessary for you to accomplish your mission. Tell me what you need and don't worry how it will be resourced. Let me worry about that.

Oil and gas companies are repeatedly cited by regulatory organizations for poor training and maintenance on providing personal protective equipment to their refinery workers. Managers of refinery and petrochemical plants are responsible for instructing their workers with the types of equipment available, how to properly wear the equipment, how to properly care and maintain the equipment, and, most importantly, it's their responsibility to enforce these regulations and safety requirements. While there are many reference materials on the subject, most are too broad to apply directly to the unique and highly volatile atmosphere of an oil and gas operation. Personnel Protection and Safety Equipment for the Oil and Gas Industries answers the call for safety managers onsite as well as workers to understand all the safety equipment available specifically for the energy sector. Condensed into one convenient reference location, this training guide is designed to inform on several types of personnel protective clothing, firefighting protective clothing, respiratory protective devices available as well as many other types of protective equipment, including fall protection and vehicle safety belts and harnesses. Industry-specific examples, multiple illustrations, and a glossary of terms make Personnel Protection and Safety Equipment for the Oil and Gas Industries a must-have on every oil and gas operation. Know recommended US and international protective safety equipment regulations Learn the types, classes, and materials of safety and protective equipment specific to the oil and gas industry Gain knowledge on how to select, test, maintain, and store protective equipment properly

Despite many advances, 20 American workers die each day as a result of occupational injuries. And occupational safety and health (OSH) is becoming even more complex as workers move away from the long-term, fixed-site, employer relationship. This book looks at worker safety in the changing workplace and the challenge of ensuring a supply of top-notch OSH professionals. Recommendations are addressed to federal and state agencies, OSH organizations, educational institutions, employers, unions, and other stakeholders. The committee reviews trends in workforce demographics, the nature of work in the information age, globalization of work, and the revolution in health care delivery--exploring the implications for OSH education and training in the decade ahead. The core professions of OSH (occupational safety, industrial hygiene, and occupational medicine and nursing) and key related roles (employee assistance professional, ergonomist, and occupational health psychologist) are profiled-how many people are in the field, where they work, and what they do. The book reviews in detail the education, training, and education grants available to OSH professionals from public and private sources.

How To Create A Medical Surveillance Program, An Example of a Program, this book is to provide a guideline for the Medical Surveillance Program (MSP). It is also intended to help occupational health professionals and others recognize and evaluate health risks associated with specific workplace exposures.

Safe Work in the 21st Century Concept Publishing Company

This instruction cancels OSHA Instructions PER 04-00-003 [PER 8-2.5] and PER 04-00-002 [PER 8-2.4] and issues the OSHA Medical Examination Program to revise the description of employees eligible for the Medical Examination Program and to update program elements to better match the occupational needs of covered employees. The 1989 OSHA Instruction PER 04-00-003 [PER 8-2.5] implemented the Single Agency Qualification Standard: Compliance Safety and Health Officers, which mandated that covered employees meet a set of physical requirements as determined by an annual physical examination (Appendix A). This directive replaces the Compliance Safety and Health Officers (CSHO) Medical Examination Program and establishes a new scope of applicability and periodicity requirements for the OSHA Medical Examination Program. The expanded scope now includes both CSHOs and any other OSHA personnel who perform field work that places them at risk for occupational exposures or other hazardous work conditions. Therefore, the medical program title and scope now reflect inclusion of personnel other than CSHOs. The revised periodicity is based on recognition that comprehensive medical evaluations, when performed annually, are not significantly beneficial for some employees, particularly those younger than 50 years of age. Therefore, medical examination frequency will be aligned with age, individual medical conditions and occupational exposures, when applicable. The medical evaluation requirements mandated by OSHA standards will continue to be applied (Appendix B). This directive allows the Office of Occupational Medicine to exercise flexibility and practical judgment in determining the appropriate medical evaluation periodicity for each covered employee. The OSHA Medical Examination Program is based on a review of: current medical literature, professional guidance, medical examination protocols in other agencies and non-occupational medical public health recommendations. Annual medical evaluations of covered employees will continue, but the more extensive medical histories and physical examinations will now be performed during Pre-placement examinations, every three years until age 50 and then every two years until age 65, at which time the frequency of examinations will change to every year. The frequency of the periodic medical history and physical examination, or parts of the examination, may be changed by the Office of Occupational Medicine (OOM) in accordance with prudent medical practice. An Interim Medical Evaluation of each covered employee will be provided in the years in which the Periodic Physical Examination is not done. The Interim Medical Evaluation will include audiometric testing, a respirator questionnaire as required by the Respiratory Protection standard, 29 CFR 1910.134, and a blood pressure determination. Additional testing, such as pulmonary function testing, may also be indicated. Participation in Periodic Physical Examinations and Interim Medical Evaluations is mandatory for all covered employees.

Occupational Health Practice is a comprehensive account of the practice of protecting and improving the health of people at work, with some emphasis on the special needs of workers in developing countries. Topics covered by this book include the functions of an occupational health service; special examinations in occupational medicine; uses and methods of epidemiology; and ergonomics. The mental health of people at work, prevention of occupational disease, and ethics in occupational health practice are also discussed. This book is comprised of 22 chapters and begins by outlining national developments in occupational medicine, along with the different forms of service provided by private enterprise and the state. The factors that influence a nation or an industrial organization to pay attention to the health of people at work are also considered. The discussion then turns to the importance of health to one's work, the functions of an occupational health service, and prevention of accidents and occupational

disease. Methods used in the study of groups of workers are described in sections on epidemiology, field surveys, and the collection and handling of sickness absence data. The text also looks at ergonomics, occupational hygiene, and ethics and education in occupational health. This monograph will be useful to physicians, hygienists, nurses, and safety officers working in the field of occupational health; to those whose interests encompass occupational health, but cannot attend a course; and to medical and non-medical specialists in related fields.
