 Religious
 belief is often
 perceived as
 being in
 conflict with
 science—but
 does it have
 to be? Not
 usually, says
 Joseph Vukov.
 In this short,
 accessible
 guide, Vukov
 advances
 three models
 for Christians
 to utilize when
 navigating the
 relationship
 between
 science and
 faith: conflict,

independence,
 and dialogue.
 He argues
 that dialogue
 is the ideal
 model to
 follow most of
 the time—but
 not
 necessarily all
 the time.
 Through a
 philosophical
 approach
 grounded in
 compelling
 real-world
 examples,
 Vukov shows
 how no single
 model can be
 universally
 adequate, and
 how Christians
 must proceed
 with
 discernment
 according to
 the nature of
 the matter at
 hand.
 Considering a

wide variety of
 illustrative
 issues—including
 cosmology,
 evolutionary
 biology,
 extraterrestrial
 life, miracles,
 brain death,
 and
 theoretical
 physics—Vukov
 introduces
 and describes
 each of the
 three models
 of interaction
 between faith
 and science,
 surveys their
 applications,
 and evaluates
 the
 effectiveness
 of each.
 Throughout,
 he encourages
 Christians to
 embrace a
 spirit of
 intellectual
 humility and

remember that, at their best, faith and science converge in their relentless human pursuit of truth. Springer Science & Business Media

The present book of basics for the social researcher provides a sound and well-structured framework for the pursuit of serious and result-oriented research. It reiterates, in ordered and logical sequence, the steps that are required to be

taken by the researcher so that he successfully plans, conducts, implements and concludes a plan of action for the study he decides on. From a discussion of the key concepts, the book guides the reader into the intricacies of the sociological methods, and subsequently the hypothesis, the research design, and the sociological data. It explains in

clear terms the methods of data collection, namely, the questionnaire, the interview, the sample poll, etc. The author has not merely collected them from various sources and arranged them systematically but has also enlivened them with his interesting style of writing. The book is intended for the research scholar and academician in social sciences and will prove to

be of great assistance in the methodology of research.

Navigating Faith and Science

DigiCat

A brave and beautiful story that will make readers laugh, and break their hearts at the same time. Now with a special note from the author!

Steven has a totally normal life (well, almost). He plays drums in the All-City Jazz Band (whose members call him the Peasant), has a crush on the

hottest girl in school (who doesn't even know he's alive), and is constantly annoyed by his younger brother, Jeffrey (who is cuter than cute - which is also pretty annoying). But when Jeffrey gets sick, Steven's world is turned upside down, and he is forced to deal with his brother's illness, his parents' attempts to keep the family in one piece, his homework, the band, girls, and

Dangerous Pie (yes, you'll have to read the book to find out what that is!).

Image processing technology has progressed significantly in recent years, and it has been commercialized worldwide to provide superior performance with enhanced computer/machine vision, video processing, and pattern recognition capabilities. Meanwhile, machine learning systems like CNN and CapsNet get

popular to provide better model hierarchical relationships and attempts to more closely mimic biological neural organization. As machine learning systems prosper, image processing and machine learning techniques will be tightly intertwined and continuously promote each other in real-world settings. Adopting this trend, however, the image processing

researchers are faced with few image reconstruction, analysis, and segmentation challenges. On the application side, the orientation of the image features and noise removal has become a huge burden.
