<p>Advanced Water Treatment: Electrochemical Methods reviews the current state-of-the-art in the electrochemical-based methods for water treatment, the effectiveness of the electrochemical oxidation technique in inactivating different primary biofilm forming paper mill bacteria, as well as sulfide and organic material in pulp and paper mill wastewater in</p>	<p>laboratory-scale batch experiments. Various electrodes are described, including boron-doped diamond, mixed metal oxide, PbO<sub>2</sub>, and their impacts on inactivation efficiency of parameters, such as current density and initial pH or chloride concentration of synthetic paper machine water. The mechanisms of action of various electrodes in different systems are</p>	<p>reported. The book is a source of information for environmental and chemical engineers due to the number of methods and industry-focused application cases and researchers who study the transition from a laboratory environment to practical applications. Includes the most recent research on advanced water treatment by electrochemical methods Describes the use of electrochemic</p>

This study focuses on a single Korean "chaebol", the business conglomerate which dominates the Korean economy. Hyundai, the largest chaebol, is examined in the context of Korean history, ancient and modern, and the Confucian value system that permeates all Korean life.
