Epilepsy is one of the most familiar chronic neurological diseases and is a common yet challenging presentation in veterinary surgeries. This book covers seizure pathogenesis, classifications, diagnostic investigations, emergency treatments and longer term treatments, with a large section on pharmacological intervention. Filling a considerable gap in the veterinary literature, it includes tables and charts for quick reference during emergencies. Seizures can be very distressing to animals and owners, yet not all seizures are the result of epilepsy, a neurological

condition. This book discusses how to distinguish between epileptic and non-neurological seizures, and provides case studies to illustrate different occurrences of epilepsy.

#1 New York Times Bestseller In this pathbreaking guide, two of the world's most popular and trusted pet care advocates reveal new science to teach us how to delay aging and provide a long, happy, healthy life for our canine companions. Like their human counterparts, dogs have been getting sicker and dying prematurely over the past few decades. Why? Scientists are beginning to understand that the chronic diseases afflicting humans—cancer,

obesity, diabetes, organ degeneration, and autoimmune disorders—also beset canines. As a result, our beloved companions are vexed with preventable health problems throughout much of their lives and suffer shorter life spans. Because our pets can't make health and lifestyle decisions for themselves, it's up to pet parents to make smart, science-backed choices for lasting vitality and health. The *Forever Dog* gives us the practical, proven tools to protect our loyal four-legged companions. Rodney Habib and Karen Becker, DVM, globetrotted (pre-pandemic) to galvanize the best wisdom from top geneticists, microbiologists, and longevity researchers; they also interviewed people whose dogs have lived into their 20s and even 30s. The result is this unprecedented and comprehensive guide, filled with surprising information, invaluable advice, and inspiring stories about dogs and the people who love them. The *Forever Dog* prescriptive plan focuses on diet and nutrition, movement, environmental exposures, and stress reduction, and can be tailored to the genetic predisposition of particular breeds or mixes. The authors discuss various types of food—including

what the commercial manufacturers don't want us to know—and offer recipes, easy solutions, and tips for making sure our dogs obtain the nutrients they need. Habib and Dr. Becker also explore how external factors we often don't think about can greatly affect a dog's overall health and wellbeing, from everyday insults to the body and its physiology, to the role our own lifestyles and our vets' choices play. Indeed, the health equation works both ways and can travel "up the leash." Medical breakthroughs have expanded our choices for canine health—if you know what they are. This definitive dog-care guide empowers us with the knowledge we need to make wise choices, and to keep our dogs healthy and happy for years to come.

Arguably the oldest form of health care, Ayurveda is often referred to as the "Mother of All Healing." Canine and Feline Epilepsy HarperCollins
The Pulitzer Prize-winning poet delivers a sharp wake-up call with his fourteenth collection. A "howdie-skelp" is the slap in the face a midwife gives a newborn. It's a wake-up call. A call to action. The poems in *Howdie-Skelp*, Paul Muldoon's new collection, include a nightmarish remake of *The Waste Land*, an elegy for his fellow Northern Irish poet Ciaran Carson, a heroic crown of sonnets that responds to the early days of the COVID-19 pandemic, a translation from the ninth-century Irish, and a Yeatsian sequence of ekphrastic poems that call into question the very idea of an "affront" to good taste. Muldoon is a poet who continues not only to capture but to command our attention.
