From 1819 to COVID-19, 200 Years of American Financial Panics offers a comprehensive historical account of financial panics in America. Through a

meticulous dissection of historical events and the benefit of his experience handling many of the country's largest bank failures, Thomas P. Vartanian reveals why so many more devastating financial crises have occurred in America than nearly every other country in the world. Vartanian provides extensive evidence of how the collision of policy-driven government actions and profit-oriented business performance have disrupted market equilibrium and made the U.S. system of financial oversight less effective and more susceptible to missing the signs of future financial crises, including policies that: imposed tariffs and chartered dozens of poorly regulated, uncapitalized state banks that facilitated panics in the 19th century; created ambivalence over whether gold,

silver or paper money should be the preeminent form of payment, creating the perfect conditions for the depression of 1893; kept interest rates low to assist the central banks in England, Germany and France, allowing an overheated U.S. stock market to shift into overdrive and crash in 1929; planted the seeds of the S&L crisis more than twenty years before when Congress imposed artificial limits on deposit interest rates and the states capped mortgage interest rates to increase homeownership; pressured banks in the 1990's to increase mortgage lending to increase home ownership while the Fed engaged in loose monetary policies, adding fuel to the greatest economic crisis since the Great Depression. 200 Years of American Financial Panics dissects financial crises

in a way not attempted before, concluding that the pyramid of governmental oversight intended to foster economic safety and stability has been turned on its head to its detriment. Vartanian provides readers with a unique list of practical solutions. Most importantly, his analysis of financial technology, from artificial intelligence and Big Data to cryptocurrencies and quantum computing, forecasts how financial markets and government regulation will change. *200 Years of American Financial Panics* is a must read for anyone that wants to understand their money, financial markets, and how they are going to change in the future.  Violence is one of the most important challenges, not only for public health systems, but also for public mental health. Violence can have immediate as well as long-term and even transgenerational effects on the mental health of its victims. This book provides a comprehensive and wide-ranging assessment of the mental health legacy left by violence. It addresses the issues as they affect states, communities and families, in other words at macro-, meso- and microlevels, beginning by describing the impact of violence on neurobiology and mental health, as well as the spectrum of syndromes and disorders associated with different forms of

violence. The work moves on to tackle violence at the international—and intranational—level before zeroing in on the nature of violence in communities such as villages or city districts. It also examines the results of violence in the family. Each type of violence has distinct effects on mental health and in each chapter specific groups are explored in depth to demonstrate the heterogeneity of violence as well as the diversity of its outcomes in the realm of public mental health. Finally, the book addresses the notion of ‘undoing violence’ by detailing case studies of effective interventions and prevention occurring in countries, communities and families. These cases give us pause to reflect on the nature of resilience and dignity in the context of violence and mental health. All the

chapters have been written by leading authors in the field and provide a state-of-the-art perspective. The authors, from different fields of expertise, facilitate interdisciplinary and international insights into the impact of violence on mental health.

Our first Research Topic entitled “Current and Future Role of Artificial Intelligence in Cardiac Imaging” provided comprehensive reviews of the recent advances and potential impact of AI for a range of cardiac imaging applications and remains available as an e-book to download at no cost. Since this first set of publications, the field has moved at pace and it is timely to now invite further up-to-date and topical

reviews but importantly original research articles via our Research Topic “Current and Future Role of Artificial Intelligence in Cardiac Imaging 2.0”.

Non-crimp fabric (NCF) composites are reinforced with mats of straight (non-crimped) fibres, giving them such advantages as strength, ease of handling and low manufacturing costs. Non-crimp fabric composites provides a comprehensive review of the use of NCF composites, their manufacture and applications in engineering. Part one covers the manufacture of non-crimp fabrics, including also topics such as structural stitching and automated defect analysis. Part two goes on to discuss the manufacture of non-crimp fabric composites, with chapters covering such topics as deformability and permeability of NCF. Part three focuses on the properties of NCF composites, with chapters on stiffness and strength, damage progression and

fatigue. Finally, part four covers the applications of NCF composites, including chapters on the aerospace and automotive industries as well as wind turbines and helicopter applications. The book concludes with a discussion of cost analysis of NCF composites in engineering applications. With its distinguished editor and international team of expert contributors, Non-crimp fabric composites is an essential reference for composite manufacturers and structural and mechanical engineers in industries using NCF composites, as well as academics with a research interest in the field. This book provides an example of the capitalization of computer and wiki technology to support collaborative writing among Mainland Chinese upper primary school students. It presents the results of a study showing the application of the Design-Based Research (DBR) methodology to design a Wiki-based Collaborative Process Writing Pedagogy (WCPWP) to help students with their writing in the Chinese context. The WCPWP is designed and developed

based on social constructivist theory and the social view of writing process theory, as well as in consideration of the Technological, Pedagogical, and Content Knowledge (TPACK) framework. Primarily aimed at researchers and practitioners in the fields of collaborative learning, TPACK, and Chinese writing, as well as Chinese language educators, this book will also deepen primary educators' understanding of the links among technology, pedagogy and content, and guide educators in the integration of social media, as well as the design of effective matching pedagogic strategies, in their teaching of writing.

An invigorating, thought-provoking, and positive look at the rise of automation

that explores how professionals across industries can find sustainable careers in the near future. Nearly half of all working Americans could risk losing their jobs because of technology. It's not only blue-collar jobs at stake. Millions of educated knowledge workers—writers, paralegals, assistants, medical technicians—are threatened by accelerating advances in artificial intelligence. The industrial revolution shifted workers from farms to factories. In the first era of automation, machines relieved humans of manually exhausting work. Today, Era Two of automation continues to wash across the entire services-based economy that has replaced jobs in agriculture and manufacturing. Era Three, and the rise of AI, is dawning. Smart computers are demonstrating they are capable of

making better decisions than humans. Brilliant technologies can now decide, learn, predict, and even comprehend much faster and more accurately than the human brain, and their progress is accelerating. Where will this leave lawyers, nurses, teachers, and editors? In *Only Humans Need Apply*, Thomas Hayes Davenport and Julia Kirby reframe the conversation about automation, arguing that the future of increased productivity and business success isn't either human or machine. It's both. The key is augmentation, utilizing technology to help humans work better, smarter, and faster. Instead of viewing these machines as competitive interlopers, we can see them as partners and collaborators in creative problem solving as we move into the next era. The choice

is ours.

This book constitutes the post-conference proceedings of the CAiSE Forum from the 22nd International Conference on Advanced Information Systems Engineering (CAiSE 2010), held in Hammamet, Tunisia, June 9, 2010. While the CAiSE conference itself focuses on papers that report on matured research, the CAiSE forum was created specifically as a platform to present fresh ideas, new concepts, and new and innovative systems, tools, and applications. The 22 papers presented in this volume were carefully reviewed and selected from 32 submissions. The reworked and extended versions of the original presentations cover topics such as business process management, enterprise architecture and modeling, service-oriented architectures, and

requirements engineering.

During its life cycle, a product produces waste that is over 20 times its weight. As such it is critical to develop products that are sustainable. Currently product development processes lack high quality methods and tools that are empirically validated to support development of sustainable products. This book is a compilation of over forty cutting edge international research papers from the 22nd CIRP International Design Conference, written by eminent researchers from 15 countries, on engineering design process, methods and tools, broadly for supporting sustainable product development. A variety of new insights into the product development process, as well as a host

of methods and tools that are at the cutting edge of design research are discussed and explained covering a range of diverse topics. The areas covered include: Sustainable design and manufacturing, Design synthesis and creativity, Global product development and product life cycle management, Design for X (safety, reliability, manufacturability, etc.), and Design taxonomy, ontology and standards. CIRP Design 2012: Sustainable Product Development provides researchers in design, engineering and sustainability access to some of the latest, quality research in this area. Practitioners and educators of engineering design and sustainability will find an empirically validated suite of methods and tools that can be applied and taught to develop

their practices.

Making notes on the fly is easy with this small notebook. Keep track of the daily to do's that seem to pop up suddenly. Use this journal to write down changes in plans that didn't make to the calendar. Write down in this lined 6 x 9 note pad thing you just remember need doing. Keep track of what you have accomplished in the day to check off in the digital family calendar later. Small enough to keep close at hand in a purse, backpack or tote bag. Large enough to actually write in without getting a cramp

in your hand.
