"This revised version of the book examines touch as a form of communication and with great insight has expanded on the importance of those offering these forms of care being able to recognize the ways in which touch therapies can be interpreted. It is vital for massage therapists to understand touch in the context of the client's life and beliefs, culture, age, gender, religion, and health status in order that delivery may be sensitively offered and accepted. Ethics receives a justifiably expanded degree of attention in the text, accurately reflecting both the profession's own increased focus on the important topic and society's demand for excellence in the ethical arena. **Introduction to Formulae of Traditional Chinese Medicine** F.A. Davis

With increased demands on medical health care due to societal developments, the sole dependence on modern medicine or Western medicine is clearly insufficient. Traditional Chinese medicine, once derided by many in the west, is now firmly in the global limelight due to its numerous advantages in preventing and treating diseases. Chinese medicine achieves its curative effects by making use of natural therapies such as animal and plant parts, which are of interest to many doctors and patients who are in favor of rectifying the entire state of the body. For over two thousand years, Chinese medicinal formulas have been extensively used in China as the main technique to prevent and treat. The accordance of formula and disease pattern is the most specific, objective, stable, and

recurrently effective aspect of treatment based on pattern differentiation, which will be introduced in this book as a reliable analytical method. In this book, the fundamental concepts of Chinese medicine, methods of conducting pattern differentiation and composing principles of formulas, and integration of indispensable courses of Chinese medicine, such as basic theories, diagnostic methods, Chinese medicinals, formulas, treatment principles, internal medicine, and warm diseases will be discussed, opening a door for novices who are interested to learn more about Chinese medicine. Through self-study of this book in a relatively short duration, it is our hope that the reader will be familiar with and preliminarily apply the basic theories of Chinese medicine and formulas in practice. This not only serves to prevent and treat diseases, but more importantly, contributes to the spread of traditional Chinese medicine.

*Mosby's Fundamentals of Therapeutic Massage* Elsevier Health Sciences

Traditional Chinese medicine (TCM), with a history of thousands of years, is the crystallization of the ancient Chinese people's experiences in their struggle against diseases. It is also an integral part of their splendid culture. Under the influence and direction of classic Chinese philosophies, it has undergone long-term medical practice and infiltrated into, as well as absorbed from, other subjects in that point in time, thus gradually evolving into a unique medical theoretical system that contributed and is still contributing significantly to the healthcare of the Chinese and the prosperity of the Chinese nation. This is the first of a 7-volume set encompassing all essential elements of TCM — ranging from Basic Theory, Diagnosis and Prescription to Chinese Materia Medica, Tui Na and Acupuncture. The basic theories of TCM are the theoretical foundations for guiding traditional Chinese preventive medicine and clinical medicine, and encompass aspects such as the philosophical foundation for TCM, understanding the effects of TCM on the physiology and pathology of the human body, and the principles in TCM for life cultivation, rehabilitation, diagnostics, and therapeutics. In this sense, the basic theories are regarded not only as an important part of TCM, but also as a compulsory course fundamental to the study and research of TCM. This book is compiled to

allow the majority of readers to understand the theory of TCM and its methods of diagnosing and treating diseases in a relatively short period of time. It provides a brief introduction to the basic characteristics and theory of TCM, and a detailed schedule of learning commonly occurring diseases and patterns and their estimated 60 corresponding prescriptions. This is a great attempt in initiating more people to understand and apply the theory of TCM to diagnose and treat common diseases and provide corresponding formulas. This is the second of a 7-volume set encompassing all essential elements of TCM — ranging from Basic Theory, Diagnosis and Prescription to Chinese Materia Medica, Tui Na and Acupuncture. The 21st century is the start of an era where people are beginning to look at health and medical care from a different perspective. Understanding the conventional pattern of medical treatment alone has ceased to meet the ever-growing demands of social development, and hence, the trend of exploiting natural therapies has gradually emerged. Besides turning to Chinese medicine as an option for treatment, increasingly, the principles and practices used in this field have been garnering more interest. This is exactly the reason why this book is compiled. It is our hope that the contents can be of help to the readers to not only understand, but suitably apply Chinese medicine in practice, and thus benefit their health. This is the third of a 7-volume set encompassing all essential elements of TCM — ranging from Basic Theory, Diagnosis and Prescription to Chinese Materia Medica, Tui Na and Acupuncture. This book aims to provide readers with adequate knowledge for clinical application of Chinese medicine, which is in line with the fundamental principle of “correspondence of Chinese medicinals and patterns.” It contains a brief introduction to relative theories, divides these medicinals by actions into categories such as exterior-releasing, heat-clearing, purgative, dampness-dispelling, fluid retention-disinhibiting, interior-warming, qi-regulating, blood-invigorating, blood-stanching, food accumulation-relieving, phlegm, cough- and wheezing-arresting, mind-tranquilizing, liver-calming, orifices-opening, tonifying, astringing, and worm-dispelling, and elaborates each herb in terms of its actions, quality, indications, usage, and dosage. Furthermore, mnemonics and simple and effective formulas are included to help readers effectively grasp the concepts behind practical applications, and precautions and daily practices are specifically designed to support readers in easily understanding and retaining the information. This is the fourth of a 7-volume set encompassing all essential elements of TCM — ranging from Basic Theory, Diagnosis and Prescription to Chinese Materia Medica, Tui Na and Acupuncture. Chinese internal medicine is a clinical subject which explains, using traditional Chinese theories, the etiology, pathology and therapeutic rules of the diseases or syndromes belonging to internal medicine. It is also the foundation for learning and research in other clinical branches of Chinese medicine, thus playing a vital role in traditional Chinese medicine (TCM). Chinese internal medicine has had a long history. Its origins can be traced back several thousand years. Through long-term diagnostic and therapeutic practices, a rich collection of experiences and theories in Chinese internal medicine has been accumulated and this has gradually evolved into a complete, distinctive and effective clinical branch. In recent decades, Chinese internal medicine has also undergone more significant developments, especially in the treatment of cardiac or cerebral vascular diseases, digestive tract diseases, renal diseases and autoimmune diseases. In order to popularize Chinese internal medicine and allow readers to grasp its basic theories as well as diagnostic and therapeutic methods, we wrote this book in a language easily comprehensible by the

layman. For ease of learning by modern doctors, we proceeded from the current clinical practice and outlined the contents with Western disease names. There are more than 80 diseases discussed in this book. For each disease, the Chinese syndrome differentiation and treatment as well as modern diagnostic key points are provided, to make it more convenient for the readers to study and understand. The study of each disease should begin from its etiology, pathology and diagnostic key points, followed by the differentiated patterns and corresponding treatments. The respective points of caution for each disease should also be well-noted. Finally, the questions forming the "Daily Exercises" are useful for readers to check their comprehension and recall of the material. Given the chance, the theoretical knowledge should also be applied in clinical practice so that past knowledge is tested and new clinical knowledge and skills can be learned. Indices to the prescriptions are supplemented at the end so as to facilitate study and consultation. This book is suitable for those who are enthusiastic about TCM and with basic medical knowledge, as well as clinical TCM doctors, nursing personnel and TCM students. This is the fifth of a 7-volume set encompassing all essential elements of TCM — ranging from Basic Theory, Diagnosis and Prescription to Chinese Materia Medica, Tui Na and Acupuncture. With increased demands on medical health care due to societal developments, the sole dependence on modern medicine or Western medicine is clearly insufficient. Traditional Chinese medicine, once derided by many in the west, is now firmly in the global limelight due to its numerous advantages in preventing and treating diseases. Chinese medicine achieves its curative effects by making use of natural therapies such as animal and plant parts, which are of interest to many doctors and patients who are in favor of rectifying the entire state of the body. Through self-study of this book in a relatively short duration, it is our hope that the reader will be familiar with and preliminarily apply the basic theories of Chinese medicine and formulas in practice. This not only serves to prevent and treat diseases, but more importantly, contributes to the spread of traditional Chinese medicine. This is the sixth of a 7-volume set encompassing all essential elements of TCM — ranging from Basic Theory, Diagnosis and Prescription to Chinese Materia Medica, Tui Na and Acupuncture. Acupuncture and moxibustion are one of the most important contributions our ancestors have made to humankind. In the narrow sense, acupuncture and moxibustion refer to medical therapy, whilst broadly, they are an integral science consisting of four subdisciplines: the subject of meridians and acupoints, the subject of acupuncture and moxibustion techniques, the subject of acupuncture and moxibustion therapy, and the subject of experimental acupuncture and moxibustion. This is the final of a 7-volume set encompassing all essential elements of TCM — ranging from Basic Theory, Diagnosis and Prescription to Chinese Materia Medica, Tui Na and Acupuncture. Traditional Chinese tui na, one of

the earliest medical treatment methods with a long history tracing back to ancient times, is an important component of traditional Chinese medicine (TCM). This book is compiled with the aim of popularizing tui na modality along with allowing readers to understand and master the fundamental theories, basic techniques, commonly used acupoints and parts, and diagnosis and treatment methods of diseases in a relatively short period of time. The book is a summary of clinical experiences of tui na with practical contents and detailed illustrations, which can be easily appreciated and serve both purposes of the popularization of tui na and advancement of non-governmental organizations (NGOs) in promoting sustainability of small and medium-sized enterprises (SMEs) in Peru. The book focuses on the domains of organic production, business social responsibility and sustainable production. The innovative study uses a combination of network and discourse analyses to identify the main patterns and shifts in the roles of NGOs in order to deal with sustainability and the market. Two major contemporary sociological theories - ecological modernization theory and network society theory - are applied to frame the analysis.
