Many of our favorite films began as plays—some as well known as Shakespeare's Romeo and Juliet, and some not so well known as You've Got Mail's origin, a 1937 play Parfumerie by Miklos Laszlo. Video Versions identifies nearly 300 films and their theatrical origins, providing readers with an overview of the films and highlighting similarities and differences to the source plays. Perfect for teachers, students, and anyone interested in theater and film, it is the most complete resource available for video versions of plays. Each entry provides: the original play's title, author, and year of publication; the name of the film, year of production, director and adapter; the main cast and the characters they play; running time and rating if available. Following a plot summary, a critical analysis provides the similarities and differences of the play and film, including character and plot changes, setting, missing or added scenes, special film techniques, and behind-the-scenes information such as who turned down or lost particular parts when the play was adapted to film. A short list of sources for further reading follows each entry. Information about contacting distributors—for obtaining the films—is included in the introduction and an extensive index completes the volume.

Anatomical Adaptations of Halophytes Luca Dell'anna
 "Luca's book was so helpful to my work. Opened my eyes up to some more reasons why change is so hard."— Chris Murman on Luca's first book. This book is for you if: - You like books dense of information - You appreciated books such as Taleb's Antifragile - You understand or are willing to accept that the world is dynamic, and that understanding how something changes is more important than understanding how something works now. - You do not like usual business/self-help books which provide solutions which only work in the short-term - You understand that some effort is needed in order to achieve long-lasting improvement This book is not for you if: - You are easily triggered by ideas you do not like - You want a simple book which will magically solve all your problems "The Power of Adaptation" focuses on the topic of adaptation as the main force shaping the world as we know it. However, adaptation is an emergent process and thus cannot be understood with narratives nor it can be acted upon directly. This book aims to describe the basic phenomena which weave together into what we perceive as adaptation and to provide a guide to help the readers practicing the four behaviors that will help him harness, rather than fight, change.

following a season of endurance training Springer
 Jane Austen's career as a novelist began in 1811 with the publication of *Sense and Sensibility*. Her work was finally adapted for the big screen with the 1940 filming of *Pride and Prejudice* (very successful at the box office). No other film adaptation of an Austen novel was made for theatrical release until 1995. Amazingly, during 1995 and 1996, six film and television adaptations appeared, first *Clueless*, then *Persuasion*, followed by *Pride and Prejudice*, *Sense and Sensibility*, the Miramax *Emma*, and the Meridian/A&E *Emma*. This book traces the history of film and television adaptations (nearly 30 to date) of Jane Austen manuscripts, compares the adaptations to the manuscripts, compares the way different adaptations treat the novels, and analyzes the adaptations as examples of cinematic art. The first of seven chapters explains why the novels of Jane Austen have become a popular source of film and television adaptations. The following six chapters each cover one of Austen's novels: *Sense and Sensibility*, *Pride and Prejudice*, *Emma*, *Mansfield Park*, *Persuasion*, and *Northanger Abbey*. Each chapter begins with a summary of the main events of the novel. Then a history of the adaptations is presented followed by an analysis of the unique qualities of each adaptation, a comparison of these adaptations to each other and to the novels on which they are based, and a reflection of relevant film and literary criticism as it applies to the adaptations.

Adaptation and Natural Selection Psychology Press
 The common view of indigenous Arctic cultures, even among scholarly observers, has long been one of communities continually in ecological harmony with their natural environment. In *Arctic Adaptations*, Igor Krupnik dismisses the textbook notion of traditional societies as static. Using information from years of field research, interviews with native Siberians, and archaeological site visits, Krupnik demonstrates that these societies are characterized not by stability but by dynamism and significant evolutionary breaks. Their apparent state of ecological harmony is, in fact, a conscious survival strategy resulting from "a prolonged and therefore successful process of human adaptation in one of the most extreme inhabited environments in the world." As their physical and cultural environment has changed—fluctuating reindeer and caribou herds, unpredictable weather patterns, introduction of firearms and better seacraft—Arctic communities have adapted by developing distinctive subsistence practices, social structures, and ethics regarding utilization of natural resources. Krupnik's pioneering work represents a dynamic marriage of ethnography and ecology, and makes accessible to Western scholars crucial findings and archival data previously unavailable because of political and language barriers.
Disney in Wonderland: A Comparative Analysis of Disney's Alice in Wonderland Film Adaptations from 1951 and 2010

Frontiers Media SA
 From David Lean's big screen *Great Expectations* to Alejandro Amenábar's reinvention of *The Turn of the Screw* as *The Others*, adaptations of literary classics are a constant feature of popular culture today. The *Bloomsbury Introduction to Adaptation Studies* helps students master the history, theory and practice of analysing literary adaptations. Following an introductory overview of major debates and concepts, each chapter focuses on a canonical text and features: - Case study readings of adaptations in a variety of media, from film to opera, televised drama to animated comedy show, YA fiction to novel/graphic novel. - Coverage of popular appropriations and re-imaginings of the text. - Discussion questions and creative exercises throughout to guide students through their own analyses. - Annotated guides to further reading and viewing plus online resources. - The book also includes chapter overviews and a glossary of critical terms to give students quick access to key information for further study, reference and revision. The *Bloomsbury Introduction to Adaptation Studies* covers adaptations of: *Jane Eyre*; *Great Expectations*; *The Turn of the Screw*; *The Great Gatsby*.

 **This is the chapter slice "Warm-Blooded Animals vs. Cold-Blooded Animals" from the full lesson plan "Classification & Adaptation" ** What Do We Classify? What is the difference between warm-blooded and cold-blooded animals? Students will also learn to distinguish between vertebrates and invertebrates, understand animal adaptation through a case study: The Koala and Its Adaptations. Even evolution and the fossil record making with hands-on activities including: How Important Are Thumbs? The Lake Habitat Thermometer and A Day in the Life of a Paleontologist! Our resource provides ready-to-use information and activities for remedial students using simplified language and vocabulary. Science concepts are presented in a way that makes them more accessible to students and easier to understand. Comprised of reading passages, student activities, test prep, and color mini posters, our resource can be used effectively for test prep, whole-class, small group and independent work. All of our content is aligned to your State Standards and are written to Bloom's Taxonomy and STEM initiatives.
Screen Adaptations: Jane Austen's Pride and Prejudice A&C Black
 "Adaptations: Critical and Primary Sources is a three-volume reference resource that brings together over 80 landmark texts in adaptation studies. Volume One covers the history of adaptation studies, by plotting the 'prehistory' of the field, beginning with Vachel Lindsay's classic *Art of the Moving Picture* (1915), through Virginia Woolf's classic essay on 'The Cinema' through to some of the most important critical and theoretical interventions up until the 1990s when the area really emerges as a critical force in the

academy. Volume Two collects essays from the last 25 years, showing how the scholarly legacy laid out in Volume One still has a profound impact on adaptation studies today, while charting the process of critical and theoretical maturation. This volume shows how adaptations studies has outgrown its contested place 'in the gap' of film and literary studies and how its interventions transcend disciplinary perspectives across the arts and humanities. Volume Three covers key case studies, such as Christine Geraghty's take on adapting Westerns, Ian Inglis' understanding of the transformation of music into movies, and Eckart Voigts' concept on Jane Austen and participatory culture. With topics ranging from the limitations of the novel to adapting stage to screen, contributions from a wide range of international scholars, film critics and novelists combine to make Adaptations: Critical and Primary Sources an original overview of critical debates today. Cartmell and Whelehan introduce each excerpt and offer a critical overview of the collected work, the rationale for its inclusion and suggestions for further reading."--

Adaptations Bloomsbury Publishing USA

Climate change is expected to have serious environmental, economic, and social impacts on South Africa. In particular, rural farmers, whose livelihoods depend on the use of natural resources, are likely to bear the brunt of adverse impacts. The extent to which these impacts are felt depends in large part on the extent of adaptation in response to climate change. This research uses a "bottom-up" approach, which seeks to gain insights from the farmers themselves based on a farm household survey. Farm-level data were collected from 794 households in the Limpopo River Basin of South Africa for the farming season 2004-2005. The study examines how farmer perceptions correspond with climate data recorded at meteorological stations in the Limpopo River Basin and analyzes farmers' adaptation responses to climate change and variability. A Heckman probit model and a multinomial logit (MNL) model are used to examine the determinants of adaptation to climate change and variability. The statistical analysis of the climate data shows that temperature has increased over the years. Rainfall is characterized by large interannual variability, with the previous three years being very dry. Indeed, the analysis shows that farmers' perceptions of climate change are in line with the climatic data records. However, only approximately half of the farmers have adjusted their farming practices to account for the impacts of climate change. Lack of access to credit was cited by respondents as the main factor inhibiting adaptation. The results of the multinomial logit and Heckman probit models highlighted that household size, farming experience, wealth, access to credit, access to water, tenure rights, off-farm activities, and access to extension are the main factors that enhance adaptive capacity. Thus, the government should design policies aimed at improving these factors.

Nothing sparks a child's or adolescent's interest like a new game! Adapted Games & Activities: From Tag to Team Building provides a wealth of games to get your students and participants moving and having fun, regardless of their cognitive or physical ability levels. By offering exciting activities that entice your students to participate, you'll not only help them reap the enormous physical benefits of exercise, but you'll also provide opportunities for them to learn to share, express feelings, set goals, and function independently. The activities in this book have been proven to work in the real world of school and recreation settings. Author Pattie Rouse, an experienced adapted physical educator and recreation and sport leader, has designed and pilot-tested these games to enhance success while challenging participants to think and use their physical abilities. The games and activities range from low to high organization, from teacher directed to community based. You'll find the following in Adapted Games & Activities: -Teacher-directed games and activities provide you with a way to work on specific skills and movements with your students and participants--and have fun at the same time. -Success-oriented tag, chase, and dodge games use a nonthreatening, interactive approach to give participants a sense of belonging and self-confidence, regardless of their physical abilities. -Team-building and cooperative games and activities teach group dynamics, self-esteem, respect, and trust. -Higher-organization games are for those students and participants who need a greater challenge. -Lead-up sport and leisure activities help your students and participants work toward playing sports in a school or community setting by developing sport-specific skills and tactics. Except for the higher-organization games, all games are simple, with few rules, so they're easy for students to comprehend. And since little or no equipment is required, your prep time is kept to a minimum. Better yet, you'll find variations for each game, as well as modifications and teaching tips, so that you can easily tailor each game to your participants' cognitive and physical abilities. And all the activities emphasize cooperation and team building to encourage social interactions, develop self-esteem, and build community spirit. Participants who enjoy and feel successful in physical activities are more likely to want to participate in the future, both in and outside of your program. Using Adapted Games & Activities will help you provide a foundation of success so that your students may experience a

lifetime of physical fitness--and the sense of accomplishment that goes along with it.

Springer Science & Business Media

The annual Congress of the Italian Biochemical and Molecular Biology Society (SIB) was held in September 1999 in Alghero, Sardegna, Italy. The programme envisaged a symposium on molecular adaptations of haemoglobin function in vertebrates. Haemoglobin specialists from several countries were invited to speak at the symposium and paved the way for wide-ranging and stimulating discussions. The symposium contributions have been collected together in this volume. The structure/function relationship in haemoglobins from vertebrates (fishes populating temperate and polar environments, diving birds, marine and terrestrial mammals) has been tackled from many angles, focusing on the adaptation of the oxygen-transport system to the constraints dictated by the environment. Eleven articles review some of the most recent developments of the studies on this ancient oxygen-transport protein, characterized by high conservation during evolution. The volume offers the reader an updated, state-of-the-art summary of a field that is enjoying a true renaissance. Covering the topic from several viewpoints, the volume includes protein chemistry (amino acid sequence, secondary, tertiary and quaternary structures, thermodynamics of oxygen-binding features), molecular biology (globin gene structure, sequence, organization, expression and regulation) and evolution. In this representation of effective multidisciplinary and multinational collaborative efforts, reference is available to a wide range of disciplines and biological systems. The tools of the investigators comprise advanced and powerful methodologies developed in recent years, e. g.

Questions and Answers on Specially Adapted Housing and Special Housing Adaptations for Veterans Springer Nature

Diet significantly affects athletic performance, and adoption of a dietary strategy that meets an athlete's nutrition goals will maximize the possibility of competitive success. Over the years, the focus has shifted from a high intake of (animal) protein to the role of carbohydrate and water. Today, there is a growing recognition that the primary role of sports nutrition may be to promote the adaptations taking place in muscle and other tissues in response to the training stimulus. There is also much interest in the implications of manipulation of the fat and carbohydrate content of the diet. This publication contains the proceedings of the 69th Nestlé Nutrition Institute Workshop held in Hawaii in October 2010. The aim of the workshop was to explore the effects of nutritional manipulations on the metabolic responses to acute and chronic exercise. Another goal was to further identify the possible role of these dietary interventions in promoting adaptive changes in muscle, adipose tissues and other potential sites of limitation to exercise performance. Papers cover the three macronutrients carbohydrate, fat and protein, plus an additional chapter on water, together with the accompanying discussions.

The Re-imagined Text Springer Science & Business Media

Undoubtedly this symposium will prove to be an important landmark in the development of our understanding of the psychopathology of human adaptation in general, as well as of the general adaptation syndrome and stress in particular. It was organized to give an opportunity to an international group of experts on adaptation and stress research to present summaries of their research that could then later be exhaustively analyzed. The carefully structured program brings out three major aspects of adaptation to stress in experimental animals and man. The first section deals with the neurophysiology of stress responses, placing major emphasis upon the neuroanatomical and neurochemical aspects involved. The second section is devoted to the psychology and psychopathology of adaptive learning, motivation, anxiety, and stress. The third section examines the role played by stress in the pathogenesis of mental diseases. Many of the relevant subjects receive particularly detailed attention. Among these, the following are especially noteworthy: The existence of reward and drive neurons. Constitutional differences in physiological adaptations to stress and distress. Motivation, mood, and mental events in relation to adaptive processes. Peripheral catecholamines and adaptation to underload and overload. Selective corticoid and catecholamine responses to various natural stimuli. The differentiation between eustress and distress. Resistance and overmotivation in achievement-oriented activity. The dynamics of conscience and contract psychology. Sources of stress in the drive for power. Advances in the therapy of psychiatric illness. The application of experimental studies on learning to the treatment of neuroses.

Understanding, assessing, and guiding adaptations in public health and health systems interventions: Current and future directions Capstone

Paring a novel into a two-hour film is an arduous task for even the best screenwriters and directors. Often the resulting movies are far removed from the novel, sometimes to the point of being unrecognizable. Stanley Kubrick's adaptations have consistently been among the best Hollywood has to offer. Kubrick's film adaptations of three novels--Lolita, The Shining and Full Metal Jacket--are analyzed in this work. The primary focus is on the alterations in the characters and narrative structure, with additional attention to style, scope, pace, mood and meaning. Kubrick's adaptations simplify, impose a new visuality, reduce violence, and render the moral slant more conventional. Instructors considering this book for use in a course may request an examination copy here.

Adapted Games & Activities The Time-course of Vascular Adaptations Following Localized Short Term Exercise Training Classification & Adaptation: Warm-Blooded Animals vs. Cold-Blooded Animals Gr. 5-8

With the increasing numbers of research workers and groups of investigators devoting themselves to the ecology of carabids I felt that the time had come to take stock of the existing knowledge in this field and to endeavour to weld my personal results and those of other workers into a comprehensive picture. It was with these aims in mind that the following study was conceived. A further goal was to attempt to show to what extent research on carabids can contribute to the larger fields of research encompassing ecology, ethology and evolution. In my opinion the investigations on carabids permit us to draw conclusions of general applicability and, as such, comparable with those made in recent years upon other groups of animals. I am well aware of the risk involved nowadays in attempting, on one's own, to integrate results from a wide variety of scientific disciplines into a meaningful whole, and for this reason I am always grateful for corrections and for additional information. It is impossible for me to mention by name all of the colleagues who have given me their support in the preparation of the book. Reprints of their publications have been placed at my disposal by almost all of the authors cited, as well as by others whose names and works have been omitted merely in order to prevent the book from taking on encyclopedic proportions. I am nevertheless indebted to them all for their cooperation.

Arctic Adaptations Springer

Persons with intellectual and developmental disabilities are living longer, thereby creating unique challenges for the aging and disabilities networks. This qualitative multicase study explored the ways in which six community service organizations serving people with intellectual and developmental disabilities have adapted their facilities and programming in response to the growing cohort of older persons in their care. The study focused on the following adaptations: physical plant, financial models, workforce, medical care and programming. Twenty-two in-depth interviews were conducted with executive-level staff of the six participating organizations. Data was triangulated through examination of archival data, organizational documents, agency web sites, and publicly available financial records. A cross-case comparison assessed the extent to which organizational characteristics promoted or impeded an agency's ability to make the adaptations necessary to facilitate the aging in place of its older consumers. The following theories contributed to the underlying framework of the study: successful aging, resource dependence, and structural inertia. Study findings indicated that the physical, financial and bureaucratic barriers play a more significant role in impeding or facilitating an agency's ability to make the adaptations necessary than does an agency's affiliation, complexity or relative size. Discussed are the policy implications related to the growing number of older persons with intellectual and developmental disabilities as well as recommendations for future study.

Annual Report of the Local Government Board ... Routledge Seminar paper from the year 2014 in the subject English Language and Literature Studies - Comparative Literature, grade: 1,0, University of Frankfurt (Main) (Institut für England- und Amerikastudien), course: Crime Fiction, language: English, abstract: "Holmes is dead," he said. "I have done with him." ("Conan Doyle Dead From Heart Attack") Sir Arthur Conan Doyle must have felt, at times, like the sorcerer's apprentice in Johann Wolfgang von Goethe's famous poem, unable to rid himself of the spirits he had conjured up. The Scot's literary oeuvre comprises up to 200 individual publications, ranging from historical novels like Micah Clarke (1889), the science fiction classic The Lost World (1912), poetry and a wide selection of short stories to non-fictional works on spiritualism, colonial Africa and memoirs. (Keulks) But the diversity of the Conan Doyle canon reflects not only the author's eclectic intellectual interests and approaches to his profession, but also attempts to counteract the popularity of one specific brainchild: Sherlock Holmes. (Keulks) It might not be quite how the author had hoped to be remembered, but the adventures involving the sleuth and Doctor Watson ensured that his literary legacy continues to thrive and inspire the works of others to the present day. On the following pages one particular

piece of proof for Holmes' continued popularity, the immensely successful television format Sherlock, is examined by putting it into context with other, preceding types of Conan Doyle adaptations and comparing the 2010 film version of the detective's first case, entitled A Study in Pink, to its source text. After focusing on the representation of the main characters and their defining traits in both media forms, as well as the relationships they share with each other and supporting characters that appear over the course of the story, the paper then adds final remarks on the process of modernization and cultural modification of not only Conan Doyle's A Stu"

Unsurpassed in authoritative, focused content, Robbins & Cotran Review of Pathology, 5th Edition, covers all major topics in general pathology and organ system pathology, effectively preparing you for coursework and examinations. Part of the highly regarded Robbins & Cotran family of texts, this easy-to-use review contains 2,000 multiple-choice questions and answers to help you master the most important principles and facts in pathology. Questions and answers have been written, reviewed, updated, and explained by experts in the field, ensuring that your knowledge is up to date, thorough, and clinically relevant. Contains 1,500 vignette-style questions in print that reinforce clinical applications and incorporate key patient care and diagnostic strategies (history, physical examination, laboratory testing, and radiologic imaging). Online, 500 additional interactive questions cover more challenging topics and less common

conditions. Uses single-best-answer and extended-matching formats to reflect levels of difficulty that prepare you for examinations. Questions are written in the style of USMLE and MCCQE questions that you will encounter for qualifying examinations. Covers the fundamentals of gross and microscopic pathology as well as the latest findings in molecular biology and genetics. Answers and detailed explanations for every question are found at the end of each chapter. Incorporates recent changes in the understanding of the pathophysiology underlying disease processes as well as the approach to workup and diagnosis of disease conditions. Reflects the breadth of content in the leading Robbins & Cotran textbooks Pathologic Basis of Disease and Basic Pathology, following the chapters for guided review and referencing them for further study. Helps you visualize key pathologic concepts and conditions with over 300 full-color images. Provides a final comprehensive exam of over 75 USMLE-style questions covering the range of topics from across the book.
