Perinatal Genetics: Diagnosis and Treatment brings together the proceedings of the 15 Annual New York State Health Department Birth Defects Symposium held on September 30-October 1, 1984 in Albany, New York. The symposium provided a forum for clarifying and rationalizing certain aspects of diagnosis and treatment of perinatal genetic birth defects such as fragile X syndrome, phenylketonuria, and hypothyroidism. Comprised of 17 chapters, this book begins with an epidemiological review of very early pregnancy loss, focusing on fertilization and implantation; the probability of loss between fertilization and implantation (on about the sixth day), and between implantation and the 14th day (the first day of the expected next period in a non-pregnant woman); and the contribution of chromosomal errors in the sperm, ovum, and zygote to early reproductive loss. The reader is then introduced to cytogenetic abnormalities in spontaneous abortions of recognized conceptions; repetitive spontaneous abortion; and prenatal genetic diagnosis by chorionic villus sampling. Subsequent chapters explore prenatal treatment of biochemical disorders; in vitro fertilization and embryo transfer; and moral issues concerning third trimester pregnancy terminations. This monograph will appeal to

perinatologists, neonatologists, obstetricians, pediatricians, and geneticists and should also serve as a useful guide for health professionals who provide care to pregnant women and their newborns.

Museums are at the heart of the nation's cultural life, bastions of Britishness in almost every major city and town. Together they detail myriad aspects of our heritage: from lawnmowers to cuckoo clocks, pencils to chairs, there seems to be no end to the subject matter deemed worthy of collection and public display. This overview of museums in Britain traces their development from 'cabinets of curiosity' to large scale visitor attractions, taking in broad social shifts and trends as well as the collectors, eccentrics and visionaries and the legacies they have left behind.

Clifford Allyn Abernathy III (just Cliff, for short) is the oldest of six kids in a family that does everything—fighting, laughing, playing, eating, telling stories, and celebrating the holidays—in a big, often outlandish, and sometimes poignant way. Taking the family from Christmas to Christmas, the chapters of *Fig Pudding*, narrated by eleven-year-old Cliff, are complete short stories in themselves. Read together, they tell the tale of life in a large, loving family. Besides a fresh look, this edition includes a brand new story.

In *Bringing the Prophets to Life*, Rabbi Neil Winkler offers us a masterful source of inspiration and insight into the early prophets. He shows us that in order to understand the vital messages of the stories, we must go beyond a simple translation of the text and identify the themes of the stories, as well as the struggles and challenges that faced the outstanding personalities of each era: the warriors and the women, the prophets and the kings.

The colorful boyhood of a popular author comes to life in this personal account. Imagine learning from a nosy classmate that your mother is having yet another baby. To Ralph's classmates, news of one more Fletcher baby is just "scuttlebutt." But for Ralph, the oldest of nine, being part of a large family means more kids to join in the fun—from making tripods in the woods and "snicking" up the rug, to raising chicks and even discovering a meteor (well, maybe). It doesn't feel like there's life beyond Marshfield, Massachusetts. Then one day Dad's new job moves the family to Chicago, and there's so much Ralph has to leave behind. In this humorous and captivating memoir, Ralph Fletcher traces the roots of his storytelling.

The Next Step Forward in Guided Reading Teaching Resources

In recent decades, some of the most celebrated and culturally influential American oratorical performances have come not from political leaders or religious visionaries, but from stand-up comics. Even though comedy and satire have been addressed by rhetorical scholarship in recent decades, little attention has been paid to stand-up. This collection is an attempt to further cultivate the growing conversation about stand-up comedy from the perspective of the rhetorical tradition. It brings together literatures from rhetorical, cultural, and humor studies to provide a unique exploration of stand-up comedy that both argues on behalf of the form's capacity for social change and attempts to draw attention to a series of otherwise unrecognized rhetors who have made significant contributions to public culture through comedy.

The history of aluminum: metallurgy, engineering, global business and politics—and the advance of civilization itself. The earth's most abundant metal, aluminum remained largely inaccessible until after the Industrial Revolution. A precious commodity in 1850s, it later became a strategic resource: while

steel won World War I, aluminum won World War II. A generation later, it would make space travel possible and the 1972 Pioneer spacecraft would carry a message from mankind to extraterrestrial life, engraved on an aluminum plate. Today aluminum, along with oil, is the natural resource driving geopolitics, and China has taken the lead in manufacture.
