A scholarly and scientific examination of the unrecognized role of trees in the planet's ecosystem reveals wood's unexpected influence on human evolution, civilization, and the global economy.

A History of the World in 100 Objects National Academies Press  
The authoritative account of the rise of Amazon and its intensely driven founder, Jeff Bezos, praised by the Seattle Times as "the definitive account of how a tech icon came to life." Amazon.com started off delivering books through the mail. But its visionary founder, Jeff Bezos, wasn't content with being a bookseller. He wanted Amazon to become the everything store, offering limitless selection and seductive convenience at disruptively low prices. To do so, he developed a corporate culture of relentless ambition and secrecy that's never been cracked. Until now. Brad Stone enjoyed unprecedented access to current and former Amazon employees and Bezos family members, giving readers the first in-depth, fly-on-the-wall account of life at Amazon. Compared to tech's other elite innovators -- Jobs, Gates, Zuckerberg -- Bezos is a private man. But he stands out for his restless pursuit of new markets, leading Amazon into risky new ventures like the Kindle and cloud computing, and transforming retail in the same way Henry Ford revolutionized manufacturing. The Everything Store is the revealing, definitive biography of the company that placed one of the first and largest bets on the Internet and forever changed the way we shop and read.

**The Philosophy of History** Speedy Publishing LLC

Ever since its first publication in 1992, *The End of History and the Last Man* has provoked controversy and debate. Francis Fukuyama's prescient analysis of religious fundamentalism, politics, scientific progress, ethical codes, and war is as essential for a world fighting fundamentalist terrorists as it was for the end of the Cold War. Now updated with a new afterword, *The End of History and the Last Man* is a modern classic.

Why Study History? Xist Publishing

Civilization is defined as the stage of human organization that is considered most advance. This means that there was a government, there were laws, and education was given. How did human evolve from being nomads to being organized? Who Built the First Human Civilization? Open and read this book to find out. *Who Built the First Human Civilization? Ancient Mesopotamia - History Books for Kids* | *Children's Ancient History* Speedy Publishing LLC

For more than 50 years, low-cost antimalarial drugs silently saved millions of lives and cured billions of debilitating infections. Today, however, these drugs no longer work against the deadliest form of malaria that exists throughout the world. Malaria deaths in sub-Saharan Africa "currently just over one million per year" are rising because of increased resistance to the old, inexpensive drugs. Although effective new drugs called "artemisinins" are available, they are unaffordable for the majority of the affected population, even at a cost of one dollar per course. *Saving Lives, Buying Time: Economics of Malaria Drugs in an Age of Resistance* examines the history of malaria treatments, provides an overview of the current drug crisis, and offers recommendations on maximizing access to and effectiveness of antimalarial drugs. The book finds that most people in endemic countries will not have access to currently effective combination treatments, which should include an artemisinin, without financing from the global community. Without funding for effective treatment, malaria mortality could double over the next 10 to 20 years and transmission will intensify.

Where did the first signs of civilization appear in the ancient world? When did people start to transition from the nomadic life of hunters and gatherers to living in the first urbanized settlements?

**Māori Religion and Mythology** Bold Type Books

Presents the history of the United States from the point of view of those who were exploited in the name of American progress.

**Battling the Gods** Library of Alexandria

This second volume of the ongoing annotated translation of Ssu-ma Ch'ien's *Shi chi* (The Grand Scribe's Records), widely acknowledged as the most important early Chinese history, contains the "basic annals" of five early Han-dynasty emperors. The annals trace the first century of Han rule (206 BC to ca. 100 BC) in a year-by-year account that focuses on imperial activities. In *The Grand Scribe's Records*, Ssu-ma Ch'ien revitalised the style of the annals he had written for previous rulers. Here are accounts of the peasant who founded the dynasty, Liu Pang, a man noted as much for his licentiousness as he was his ruthless political instinct, and of his cruel wife, Empress Lü, who murdered her chief rival for Liu Pang's affections in the most gruesome manner. The annals of two relatively undistinguished emperors follow. The volume concludes with Ssu-ma's depiction of perhaps the greatest ruler of the Han, Emperor Wu, told within the context of his delusive attempts to find a means to achieve immortality. When completed this translation will bring all 130 chapters of the *Shih chi* into English. Volumes 1 and 7 were published by Indiana University Press in 1994.

Teaching White Supremacy Vintage

What is mechanical engineering? What a mechanical engineering does? How did the mechanical engineering change through ages? What is the future of mechanical engineering? This book answers these questions in a lucid manner. It also provides a brief chronological history of landmark events and answers questions such as: When was steam engine invented? Where was first CNC

machine developed? When did the era of additive manufacturing start? When did the marriage of mechanical and electronics give birth to discipline of mechatronics? This book informs and create interest on mechanical engineering in the general public and particular in students. It also helps to sensitize the engineering fraternity about the historical aspects of engineering. At the same time, it provides a common sense knowledge of mechanical engineering in a handy manner.

It will provide valuable insights and lessons that will help solve today's problems. It's not just about dates and people; rather, history is more about events. Read this book today!

*Saving Lives, Buying Time* Penguin

A philosophical interpretation of history, examining the significance of historical study as a science and a reflection of social values.

**The Outline of History** Harper Collins

Professor Luce considers to what extent Livy may be said to have been in control of his historical material. What is the significance, the author asks, of the units by which Livy structured his history? How did he go about preparing himself to write, and what methods did he use in the course of actual composition? Did he have an interpretation of his own concerning the overall course of Roman history, and, if so, how did it affect his selection and arrangement of material? The author examines these questions largely by the means of an analysis of Books 31-45, which he compares with the work of Polybius. He then scrutinizes the design of the history as a whole, its author's attitude toward his sources generally, and his method of composition. A final chapter considers how Livy's use of material may have been influenced by his view of change and development in Roman history, particularly with regard to the genesis and decline of the Roman national character. By examining Livy's method of creation, Professor Luce extends our understanding of his achievement. T.J. Luce is Professor and Chairman of the Classics Department at Princeton University. Originally published in 1978. The Princeton Legacy Library uses the latest print-on-demand technology to again make available previously out-of-print books from the

distinguished backlist of Princeton University Press. These editions preserve the original texts of these important books while presenting them in durable paperback and hardcover editions. The goal of the Princeton Legacy Library is to vastly increase access to the rich scholarly heritage found in the thousands of books published by Princeton University Press since its founding in 1905.

Considering studying history at university? Wondering whether a history degree will get you a good job, and what you might earn? Want to know what it's actually like to study history at degree level? This book tells you what you need to know. Studying any subject at degree level is an investment in the future that involves significant cost. Now more than ever, students and their parents need to weigh up the potential benefits of university courses. That's where the Why Study series comes in. This series of books, aimed at students, parents and teachers, explains in practical terms the range and scope of an academic subject at university level and where it can lead in terms of careers or further study. Each book sets out to enthuse the reader about its subject and answer the crucial questions that a college prospectus does not.

**Livy** London Publishing Partnership

Who invented beds? When did we start cleaning our teeth? How old are wine and beer? Which came first: the toilet seat or toilet paper? What was the first clock? Every day, from the moment our alarm clock wakes us in the morning until our head hits our pillow at night, we all take part in rituals that are millennia old. Structured around one ordinary day, *A Million Years in a Day* reveals the astonishing origins and development of the daily practices we take for granted. In this gloriously entertaining romp through human history, Greg Jenner explores the gradual—and often unexpected—evolution of our daily routines. This is not a story of wars, politics, or great events. Instead, Jenner has scoured Roman rubbish bins, Egyptian tombs, and Victorian sewers to bring us the most intriguing, surprising, and sometimes downright silly historical nuggets from our past. Drawn from across the world, spanning a million years of humanity, this book is a smorgasbord of historical delights. It is a history of all those things you always wondered about—and many you have never considered. It is the story of your life, one million years in the

making.

*The Epic of Gilgamesh* Arrow

From the leading scholars behind *The Greek Plays*, a collection of the best translations of the foremost Greek historians, presenting a sweeping history of ancient Greece as recorded by its first chroniclers “Just the thing to remind us that human history, though lamentably a work in progress, is always something we can understand better.”—Sarah Ruden, translator of *The Gospels* and author of *The Face of Water* The historians of ancient Greece were pioneers of a new literary craft; their work stands among the world's most enduring and important legacies and forms the foundation of a major modern discipline. This highly readable edition includes new and newly revised translations of selections from Herodotus—often called the “father of history”—Thucydides, Xenophon, and Plutarch, the four greatest Greek innovators of historical narrative. Here the reader will find their most important, and most widely taught, passages collected in a single volume. The excerpts chart the landmark events of ancient Greece and provide a comprehensive account of the entire classical Greek age. From the start the Greek historians demonstrated how broad and varied historical writing could be and brought their craft beyond a mere chronicle of past events. This volume explores each author's interest in religion, leadership, character, and the lessons of war. How, for instance, should readers interpret Herodotus' inclusion of speeches and dialogues, dreams, and oracles as part of the “factual” record? What did Thucydides understand about human nature that (as he said) stays constant throughout time? How did Plutarch frame historical biography as a means of depicting the moral qualities of great men? Complete with introductions to the works of each historian, footnotes providing context and explaining obscurities, maps, and an appendix on the Greek conduct of war, this volume is an invaluable resource for students and passionate readers of history alike.

experts provide a comprehensive guide to understanding this ancient documentary evidence.

**Ancient Near East** National Academies Press

The National Book Award winning history of how racist ideas were created, spread, and deeply rooted in American society. Some Americans insist that we're living in a post-racial society. But racist thought is not just alive and well in America -- it is more sophisticated and more insidious than ever. And as award-winning historian Ibram X. Kendi argues, racist ideas have a long and lingering history, one in which nearly every great American thinker is complicit. In this deeply researched and fast-moving narrative, Kendi chronicles the entire story of anti-black racist ideas and their staggering power over the course of American history. He uses the life stories of five major American intellectuals to drive this history: Puritan minister Cotton Mather, Thomas Jefferson, abolitionist William Lloyd Garrison, W.E.B. Du Bois, and legendary activist Angela Davis. As Kendi shows, racist ideas did not arise from ignorance or hatred. They were created to justify and rationalize deeply entrenched discriminatory policies and the nation's racial inequities. In shedding light on this history, *Stamped from the Beginning* offers us the tools we need to expose racist thinking. In the process, he gives us reason to hope.
