Recently, research on the ways in which goals, affect, and self-regulation influence one another has enjoyed an upsurge. New findings are being published and new theories are being developed to integrate these findings. This volume reports on the latest of this work, including a substantial amount of data and theory that has not yet been published. Emanating from a conference exploring affect as both a cause and effect in various social contexts, this book examines some of the complex and reciprocal relationships among goals, self structures, feelings, thoughts, and behavior. The chapters address: *the effects of intrinsic versus extrinsic goals; *the different effects of approach versus avoidance goals; *the role of awareness in goal pursuit and affective states; *the meaning of affective states in relation to goal attainment; *the impact of hedonistic concerns as motivational factors; *how people regulate their moods; and *the role of the self in affective experiences.

Adaptation-level Theory Guilford Press

An Advanced Study Institute on the Biology of Aggression was held in glorious weather between the twenty-first and thirtieth of July 1980, at the Chateau de Bonas, Gers, France. The Institute was arranged by a scientific organizing committee consisting of Drs. Paul Brain and David Benton of the University College of Swansea, Wales, U.K. This book reflects the papers presented at the A.S.I., and the arrangement of the book parallels the programme. The particular objective was to concentrate on recent research on aggression from the viewpoint of the diverse biological disciplines that have examined the topic. A major theme that emerged was the failure of direct reductionist approaches that look for simple relationships between biological variables and 'aggression'. As may have been predicted, there was also considerable debate about the definition of the term aggression and its associated positive and negative implications. The organizers would like to express their appreciation to Professor and Madame Simon for their foresight in founding the Association Scientifique Culturelle et Educative de Bonas and their enthusiasm in designing and converting the Chateau de Bonas to produce a unique conference centre, a venue that greatly facilitated this A.S.I.'s objectives. Greatful thanks are also due to the Faculty who selflessly gave of their time; to Dr.

Weaving stories from personal experiences with compelling examples from everyday life, Social Psychology introduces the field as an evolving, science-driven conversation, prompting students to become active participants in the social psychology dialogue.

Techniques of Social Influence Simon and Schuster

This volume takes the positive view that conversation between persons with dementia and their interlocutors is a privileged site for ongoing cognitive engagement. The book aims to identify and describe specific linguistic devices or strategies at the level of turn-by-turn talk that promote and extend conversation, and to explore real-world engagements that reflect these strategies. Final reflections tie these linguistic strategies and practices to wider issues of the "self" and "agency" in persons with dementia. Thematically, the volume fosters an integrated perspective on communication and cognition in terms of which communicative resources are recognized as cognitive resources, and communicative interaction is treated as reflecting cognitive engagement. This reflects perspectives in cognitive anthropology and cognitive science that regard human cognitive activity as distributed and culturally rooted. This volume is intended for academic researchers and advanced students in applied linguistics, linguistic and medical anthropology, nursing, and social gerontology; and practice professionals in speech-language pathology and geropsychology.

On Multiple Selves John Wiley & Sons

In the World Library of Psychologists series, international experts themselves present career-long collections of what they judge to be their finest pieces - extracts from books, key articles, salient research findings, and their major practical theoretical contributions. In this volume Arie Kruglanski reflects on the development throughout his distinguished career of his wide-ranging research covering radicalisation, human judgement and belief formation, group and intergroup processes, and motivated cognition. This collection offers an invaluable insight into the key works behind the formation of Kruglanski's seminal theory of lay epistemics, as well as his important input into a diverse range of fields of social psychology. A specially written introduction gives an intimate overview of this career, and contextualises the selection in relation to changes in the field during this time. With continuing relevance today, and of vast historical importance, this collection is essential reading for anyone with an interest in goals, belief formation, group processes, and social psychology in general.

Doing Social Psychology Psychology Press

Interpersonal rejection ranks among the most potent and distressing events that people experience. Romantic rejection, ostracism, stigmatization, job termination, and other kinds of rejections have the power to compromise the quality of people's lives. As a result, people are highly motivated to avoid social rejection, and, indeed, much of human behavior appears to be designed to avoid such experiences. Yet, despite the widespread effects of real, anticipated, and even imagined rejections, psychologists have devoted only passing attention to the topic, and the research on rejection has been scattered throughout a number of psychological subspecialties (e.g., social, clinical, developmental, personality). In the past few years, however, we have seen a surge of interest in the effects of interpersonal rejection on behavior and emotion. The goal of this book is to pull together the contributions of several scholars whose work is on the cutting edge of rejection research, providing a scholarly yet readable overview of recent advances in the area. In doing so, it not only provides a look at the current state of the area but also helps to establish the topic of rejection as an identifiable area for future research. Topics covered in the book include: ostracism, unrequited love, betrayal, stigmatization, rejection sensitivity, rejection and self-esteem, peer rejection in childhood, emotional responses to rejection, and personality moderators of reactions to rejection.

On Multiple Selves refutes the idea that a human being has a single unified self. Instead, David Lester argues, the mind is made up of multiple selves, and this is a normal psychological phenomenon. Lester expands on his earlier work on the phenomenon, illuminating how a "multiple-self theory of the mind" is critically necessary to understanding human behavior. Most of us are aware that we have multiple selves. We adopt different "façade selves" depending on whom we are with. Lester argues that contrary to the popular psychological term, "false self," these presentations of self are all part of us, not false; they simply cover layers of identity. He asserts that at any given moment in time, one or another of our subselves is in control and determines how we think and act. Lester covers situations that may encourage the development of multiple selves, ranging from post-traumatic stress resulting from combat to bilinguals who speak two (or more) languages fluently. Lester's views of multiple selves will resonate with readers' individual subjective experience. On

Multiple Selves is an essential read for psychologists, philosophers, and social scientists and will fascinate general readers as well.

Social Psychology Australian & New Zealand Edition Oxford Library of Psychology

This volume reveals how social-cognitive structures and processes serve as a basis of personality coherence--the unique patterns of experience and action that make each of us who we are. In doing so, the volume demonstrates how a personality theory can be built on psychology's broader foundation of knowledge about cognitive and affective systems and the interactions between persons and the sociocultural environment. Presenting novel theoretical developments from leaders in personality, social, cultural, and developmental psychology, chapters show how personality coherence arises from the ways people assign meaning to social information, gain causal agency over their lives through self-knowledge and self-reflective processes, and organize multiple life events within a framework of goals and life tasks. The book stands as the most definitive presentation to date of the social-cognitive theories of personality.

Measures of Personality and Social Psychological Constructs Psychology Press

Presenting state-of-the-art research from leading investigators, this volume examines the processes by which people understand their interpersonal experiences. Provided are fresh perspectives on how individuals glean social knowledge from past relationships and apply it in the here and now. Also explored are the effects of biases and expectancies about significant others on relationship satisfaction and personal well-being. Broad in scope, the book integrates findings from experimental

social psychology with insights from developmental, personality, and clinical psychology.

Throughout, chapters strike an appropriate balance between theory and method, offering an understanding of the core issues involved as well as the tools needed to study them.

Interpersonal Cognition Oxford University Press
