Reduce your accent when pronouncing English, with the expertise from an acclaimed specialist in the area. Developed by acclaimed speech consultant and accent specialist Susan Cameron, *Perfecting Your English Pronunciation* features her successful method, which focuses on the anatomical placement of sound and on the musculature used in articulation. Where other accent reduction/English pronunciation products rely on solely mimicking of audio sounds, this work focuses visually, audibly, and narratively on the physical ability to speak English, noting that many sounds of English may be difficult for you because some tongue positions used in English may not be used in your native language. The 45-minute DVD introduces you to mouth and jaw exercises to prepare you for English, then demonstrates mouth formations and tongue placement using other nonnative speakers like you. You will see and hear how English sounds--enabling you to become more and more comfortable conversing with native English speakers as you go through the program.

This publication is the revised edition of the Cued Articulation range. The previously separate titles Cued Articulation and Cued Vowels are now combined and updated, with this edition covering consonants, vowels, demonstrative images, and full color coding throughout. The book was originally devised to help severely speech and language handicapped children to see a sound and hear a letter by the use of easy and logical hand cues. The Cued Articulation system has, over the last three decades, proved to be an invaluable teaching tool. Its potential and practicality is widespread and utilized by speech pathologists, speech and language therapists, remedial and reading recovery teachers who find the approach helpful in showing phoneme-grapheme relationships, and primary teachers who use it in the classroom to teach children the sounds of speech. Teachers who teach correct pronunciation to those who have English as a second language also find it extremely useful, as do teachers of the hearing impaired who want their students to see the sounds they cannot hear. Also available to compliment the book is an instructional, interactive DVD (# 9780864319180), which includes demonstrations of the cues and sounds.

Treating older children and adolescents who have difficulty correctly producing /r/ sounds remains an ongoing source of frustration for many clinicians. The new professional resource Remediation of /r/ for Speech-Language Pathologists provides the most up-to-date information on the current understanding of /r/ and the related errors, along with a range of treatment options, to offer a comprehensive tool for Speech-Language Pathologists (SLPs) treating this complex issue. In addition to a discussion of traditional articulation therapy and ways to improve the administration of this technique, this practical text offers a detailed review and explanation of several very promising alternative approaches. Written in what has been described as Dr. Flipsen's "folksy" style, this text is designed for the busy clinician. The first five chapters of Remediation of /r/ for Speech-Language Pathologists delve into the basic information needed to treat /r/. The next six chapters each tackle a specific treatment option. The treatment section begins with a re-examination of traditional articulation therapy and uses research evidence to help clinicians to fine-tune its application. It then progresses to discussing more significant modifications to traditional therapy and introduces several newer approaches to modifying the feedback being provided to the client. For each treatment option, the author presents a solid rationale and the latest evidence, along with practical strategies for their implementation. The final chapter discusses methods for deciding which remediation method to choose when working with /r/ errors.
