Driving is a fact of life. We  
are all spending more and  
more time on the road,  
and traffic is an issue we  
face everyday. This book  
will make you think about  
it in a whole new light. We

have always had a  
passion for cars and  
driving. Now Traffic offers  
us an exceptionally rich  
understanding of that  
passion. Vanderbilt  
explains why traffic jams  
form, outlines the  
unintended consequences  
of our attempts to  
engineer safety and even  
identifies the most  
common mistakes drivers  
make in parking lots.  
Based on exhaustive

research and interviews with driving experts and traffic officials around the globe, Traffic gets under the hood of the quotidian activity of driving to uncover the surprisingly complex web of physical, psychological and technical factors that explain how traffic works. *The Owner-Builder Book: Construction Bargain Strategies* Taunton Press

As existing buildings age, nearly half of all construction activity in Britain is related to maintenance, refurbishment and

conversions. Building adaptation is an activity that continues to make a significant contribution to the workload of the construction industry. Given its importance to sustainable construction, the proportion of adaptation works in relation to new build is likely to remain substantial for the foreseeable future, especially in the developed parts of the world. *Building Adaptation, Second Edition* is intended as a primer on the physical

changes that can affect older properties. It demonstrates the general principles, techniques, and processes needed when existing buildings must undergo alteration, conversion, extension, improvement, or refurbishment. The publication of the first edition of *Building Adaptation* reflected the upsurge in refurbishment work. The book quickly established itself as one of the core texts for building surveying students and others on undergraduate and

postgraduate built environment courses. This new edition continues to provide a comprehensive introduction to all the key issues relating to the adaptation of buildings. It deals with any work to a building over and above maintenance to change its capacity, function or performance.
